Probable original construction 17th /18th century Probable contemporary with the original structure or

slightly later 18th century ?

This part of the building has been added to the original structure as the type of timber and the construction methodology particularly to the First floor varies from that of the original in addition the roof timbers to the two parts of the dwelling are not contiguous. It is possible that this part of the building formed an independant dwelling as the recess to the front RHS of the dwelling is indicative of a door opening. The mapping of 1888 shows the front of the building as stepped. Overlaying the mapping using the boundary lanes and building as datums indicates the this part of the building was in existance 1838 to 1888 but it is unlikely this was in its present form in its present form.

Construction possibly dating from early 20th c porch constructed of imperial bricks laid on edge. Buttressing likely to be brick construction and it would appear that the front and RHS wall have been refaced as unlike other parts of the building the face of the walls are straight and vertical. The fireplace in this room is a later style. It is possible that the cottage was altered and upgraded in the early 20th c Whilst some of the estate books survive1903-1910; 1911-1919 we have yet to establish any reference to this in the archive.

Older doorway 17th C? not in original location.
