**Use of This Document**  
 This document should be used in conjunction with the relevant Arboricultural Impact Assessment and the Tree Survey Schedule.

**Tree Categorisation & Numbering**  
 The method used for categorising the trees can be seen in Appendix 1 of the Tree Survey/Arboricultural Impact Assessment. The categorisation method used is an expansion of the method suggested in BS: 5827:2012.

BS: 5827:2012 recommends that better quality trees (C1, A & B) are retained where possible. Trees to be retained to the site are considered where they may be retained by development.

The trees considered significant within the context of the development are indicated and assigned a grade of 'A' or 'B' to describe whether they are an individual or a group, and 'C' or 'F' for a shrub or hedge. Using this specific number further information for each tree can be found on the Arbor Survey.

**Root Protection Areas**  
 The root protection areas (RPA) are shown in the diagram. The RPA is defined as the area around the base of the tree which is required to be protected to ensure the health and stability of the tree. The RPA is determined by the diameter of the tree at 1.4m above ground level. The RPA is shown as a shaded area around the tree.
