Hi Suzanne,

T12 Removing approx. 2 branches and reducing approx. 5m on the eastern side of the tree.

T13 carryout a lateral crown reduction of between 25 and 50cms to reduce the crown back to the boundary line.

Reasons for the works are to abate the nuisance for trees growing too close to properties and prevent direct damage to properties.

For a good maintenance regime for the trees.

And to allow space for vehicles to pass through without damaging trees.

Many Thanks
