

**NOTES**

All measures described are for the ecological enhancement of the site and based on ecologist recommendations.

Grassland management will encourage diverse swards and wildflowers as per the ecologists recommendations.

Overall management will encourage a diverse habitat mosaic across the site, with areas of woodland, grassland and scrub and the protection and enhancement of wildflowers and native woodland.

This along with the enhanced hedgerow planting, native scrub and wildflower meadow would mitigate for any potential impacts. These will be erected under the guidance of the appointed ecological clerk of works and will be located on suitable trees in the adjoining woodland.

There will be no artificial lighting beyond that associated with the new holiday cabins. Artificial lighting will be of a downward pointing design to avoid illumination of the nearby habitats. This will ensure no impacts on bats or other nocturnal wildlife that may be present in the wider area.

For more information and full details of mitigation and enhancement recommendations, see the ecology report included with this application.
