

Biodiversity Survey

Requirement for an ecology survey, please could I ask that the attached photographs of the site be considered. We do not believe that an ecology survey is reasonable in this instance - the entirety of the site is a regularly mowed lawn and the development is extremely modest and localised. I have marked the approx. location of the development in red on one of the photos. We would contend that there is demonstrably no ecological value. Notwithstanding that the site is a LWS, the development will pose no impact.

Kind regards
