Application for tree works

The tree T3 on drawing needs to be cut down due to the trunk at the bottom rotting away and hollow inside, roots below are mushy. The disease it has is canker, please see photos, and this was confirmed by JW tree care, James Wood. please see report.

We moved into the house in March 2022, The tree is at the edge of the main road (The Street) three times a day we have parents parking outside our front garden and walking their children to the school, I am concerned that sometime in the future it may fall towards the road due to the angle its leaning, blocking the road, damaging the property across the road, or most of all harming somebody.

Also we have some trees with branches hanging over the road side which are very low and high vehicles are knocking them when they pass by, am I responsible if damage is done to the vehicles and if so can and should I remove these branches

Kind Regards
