Tree Report for Holly Lodge, Gubeon Wood, NE61 6BH.

9th September 2023

Group of Fraxinus Excelsior (Common Ash), interspersed throughout garden woodland, marked at chest height with red/white barrier tape. Trees 1-11 are infected with Chalara caused by the fungus Hymenoscyphus Fraxinarius. This infection is now prolific in the North East of England.

Report and Recommendations

Tree Ident.	Tree Type	Description	Recommendations
T1	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T2	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T3	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T4	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T5	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T6	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T7	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T8	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T9	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T10	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.
T11	Common Ash	Heavily infected with Chalara.	Fell, leaving stump.

All infected trees will now be prone to weakness and branch shedding. The garden is regularly accessed by house owner, leaving her at risk of harm.
