

1. **Asbestos and Lead paint prechecks:** As with any pre 1990 construction it is important to undertake an asbestos survey prior to demolition and advisable that prior to disturbing any surface a paint test be undertaken for lead
2. **Concrete paving:** any cutting either for investigation or construction purposes should be wet cut cutting to minimize dust.
3. Steep banks to north of house to be fenced off
4. All strengthening of the structure should be undertaken before works on excavation commence.
