## **Ordnance Survey Plan**

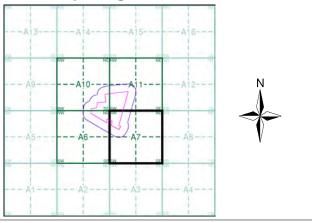

## Published 1953 - 1954 Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## **Published 1978**

## Source map scale - 1:2,500

The SIM cards (Ordnance Survey's `Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

## **Large-Scale National Grid Data**

## Published 1992

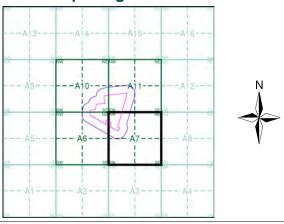

## Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

## Published 1904 - 1905 Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

#### Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

#### Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

#### Segmen

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

#### Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

## Appendix D Coal Authority Consultants Mining Report

# CON29M coal mining report

SITE AT, BALSALL COMMON, SOLIHULL, WEST MIDLANDS

#### Known or potential coal mining risks

Future underground coal mining

Page 3

#### Further action

No further reports from the Coal Authority are required. Further information on any next steps can be found in our Professional opinion.

For more information on our reports please visit www.groundstability.com

## **Professional opinion**

According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. It is unlikely that these features will impact on the stability of the enquiry boundary.

## Accessibility

If you would like this information in an alternative format, please contact our communications team on 0345 762 6848 or email communications@coal.gov.uk.

# Detailed findings

Information provided by the Coal Authority in this report is compiled in response to the Law Society's CON29M Coal Mining enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL.

The Coal Authority owns the copyright in this report and the information used to produce this report is protected by our database rights. All rights are reserved and unauthorised use is prohibited. If we provide a report for you, this does not mean that copyright and any other rights will pass to you. However, you can use the report for your own purposes.

#### Past underground coal mining

The property is not within a surface area that could be affected by any past recorded underground coal mining.

## 2

#### Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

## 3

#### Future underground coal mining

The property is not in an area where the Coal Authority has received an application for, and is currently considering whether to grant a licence to remove or work coal by underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

## 4

#### Mine entries

There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.

Your reference: 297628468\_1 Our reference: 51003214428001

If you require any further assistance please contact our experts on:

Page 3 of 7

0345 762 6848

## 5

#### Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

## 6

#### Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

### Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

## 8

#### Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

## 9

#### Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

### Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

groundstability@coal.gov.uk

## 11

### Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

## 12

#### Withdrawal of support

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

## 13

## Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

## 14

## Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Your reference: 297628468\_1
Our reference: 51003214428001
Date: 29 June 2022

Client name: **NLIS Hub** 

If you require any further assistance please contact our experts on:

## Statutory cover

## Coal mining subsidence

In the unlikely event of any coal mining related subsidence damage, the Coal Authority or the mine operator has a duty to take remedial action in respect of subsidence caused by the withdrawal of support from land or property in connection with lawful coal mining operations.

When the works are the responsibility of the Coal Authority, our dedicated public safety and subsidence team will manage the claim. The house or land owner ("the owner") is covered for these works under the terms of the Coal Mining Subsidence Act 1991 (as amended by the Coal Industry Act 1994). Please note, this Act does not apply where coal was worked or gotten by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you believe your land or property is suffering from coal mining subsidence damage and you need more information on what to do next, please use the following link to our website which sets out what your rights are and what you need to consider before making a claim.

www.gov.uk/government/publications/coal-mining-subsidence-damage-notice-form

#### Coal mining hazards

Our public safety and subsidence team provide a 24 hour a day, 7 days a week hazard reporting service, to help protect the public from hazards caused by past coal workings, such as a mine shaft or shallow working collapse. To report any hazards please call **0800 288 4242**. Further information can be found on our website: <a href="https://www.gov.uk/coalauthority">www.gov.uk/coalauthority</a>.

## Glossary

#### Key terms

adit - horizontal or sloped entrance to a mine

coal mining subsidence - ground movement caused by the removal of coal by underground mining

**Coal Mining Subsidence Act 1991** - the Act setting out the duties of the Coal Authority to repair damage caused by coal mining subsidence

**coal mining subsidence damage** - damage to land, buildings or structures caused by the removal of coal by underground mining

coal seams - bed of coal of varying thickness

**future opencast coal mining** - a licence granted, or licence application received, by the Coal Authority to excavate coal from the surface

**future underground coal mining** - a licence granted, or licence application received, by the Coal Authority to excavate coal underground. Although it is unlikely, remaining coal reserves could create a possibility for future mining, which would be licensed by the Coal Authority

mine entries - collective name for shafts and adits

**payments to owners of former copyhold land** - historically, copyhold land gave rights to coal to the copyholder. Legislation was set up to allow others to work this coal, but they had to issue a notice and pay compensation if a copyholder came forward

shaft - vertical entry into a mine

**site investigation** - investigations of coal mining risks carried out with the Coal Authority's permission

**stop notice** - a delay to repairs because further coal mining subsidence damage may occur and it would be unwise to carry out permanent repairs

**subsidence claim** - a formal notice of subsidence damage to the Coal Authority since it was established on 31 October 1994

**withdrawal of support** - a historic notice informing landowners that the coal beneath their property was going to be worked

working facilities orders - a court order which gave permission, restricted or prevented coal mine workings

## Appendix E Zetica UXO Map and Preliminary Risk Assessment

Pre-Desk Study As	sessment		
Site:	Pheasant Oak Farm/Hob Lane, Coventry, West Midlands		
Client:	PJA		
Contact:	Chris Oliver		
Date:	22 <sup>nd</sup> June 2022		
Pre-WWI Military Activity on or Affecting the Site	None identified.		
WWI Military Activity on or Affecting the Site	None identified.		
WWI Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site:  Transport infrastructure and public utilities.		
WWI Bombing	None identified on the Site.		
Interwar Military Activity on or Affecting the Site	None identified.		
WWII Military Activity on or Affecting the Site	None identified.		
WWII Strategic Targets (within 5km of Site)	<ul> <li>The following strategic targets were located in the vicinity of the Site:</li> <li>Transport infrastructure and public utilities.</li> <li>Industries important to the war effort, including aircraft manufacturing and engineering works.</li> <li>Royal Air Force (RAF) Honiley.</li> <li>Anti-Aircraft (AA) and anti-invasion defences.</li> </ul>		
WWII Bombing Decoys (within 5km of Site)	1No. located approximately 3.7km west of the Site.		
WWII Bombing	During WWII the Site was located in the Rural District (RD) of Meriden, which officially recorded 801No. High Explosive (HE) bombs with a bombing density of 13.0 bombs per 405 hectares (ha).		
	No readily available records have been found to indicate that the Site was bombed.		
Post-WWII Military Activity on or Affecting the Site	None identified.		
Recommendation	A detailed desk study, whilst always prudent, is not considered essential in this instance.		

This summary is based on a cursory review of readily available records. Caution is advised if you plan to action work based on this summary.

It should be noted that where a potentially significant source of UXO hazard has been identified on the Site, the requirement for a detailed desk study and risk assessment has been confirmed and no further research will be undertaken at this stage. It is possible that further indepth research as part of a detailed UXO desk study and risk assessment may identify other potential sources of UXO hazard on the Site.

#### **Appendix F** Risk Matrix

The approach to risk evaluation is a qualitative method in general accordance with the CIRIA C552 2001 document. It involves the classification of the potential consequence of risk occurring and the probability of the risk occurring.

#### **Classification of Consequence**

The terms and definitions relating to the classification of consequence are summarised in Table F1:

**Table F1: Classification of Consequence** 

Classification	Definition	Example
Severe	Short term (acute) risk to human health likely to result in "significant harm" as defined by the Environment Protection Act 1990, Part IIA. Short term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource. Catastrophic damage to buildings/property. A short-term risk to a particular ecosystem, or organism forming part of such ecosystem (note: the definitions of ecological systems within the Circular on Contaminated Land, DETR, 2000).	- High concentrations of cyanide on the surface of an informal recreation area Major spillage of contaminants from site into controlled water Explosion, causing building collapse (can also equate to a short term human health risk if buildings are occupied.
Medium	Chronic damage to Human Health ("significant harm" as defined in the DETR, 2000). Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution). A significant change in a particular ecosystem, or organism forming part of such ecosystem. (note: the definitions of ecological systems within Circular on Contaminated Land, DETR, 2000).	- Concentrations of a contaminant from site exceed the generic, or site-specific assessment criteria Leaching of contaminants from a site to a major or minor aquifer (renamed principal, secondary and significant drift under the Water Framework Directive) Death of a species within a designated nature reserve.
Mild	Pollution of non-sensitive water resources. Significant damage to buildings/structures and crops ("significant harm" as defined in the Circular on Contaminated Land, DETR, 2000). Damage to sensitive buildings/structures or the environment.	- Pollution of non-classified groundwater Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).
Minor	Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. Non-permanent health effects to human health (easily prevented by means such as Personal Protective Clothing, etc.). Easily repairable effects of damage to buildings/structures.	- The presence of contaminants at such concentrations that protective equipment is required during site works The loss of plants in a landscaping scheme Discolouration of concrete.

#### **Classification of Probability**

Probability is classified based on the following terms and definitions:

**Table F2: Classification of Probability** 

Classification	Definition	
High Likelihood	There is a pollution linkage and an event which would either appear very likely in the short term and almost	
	inevitable over the long term, or, there is evidence at the receptor of harm or pollution.	

Classification	Definition
Moderate Likelihood	There is a pollution linkage and all the elements are present and in the right place which means that it is probable that an event will occur.  Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur.  However, it is by no means certain that even over a longer period such event would take place and is less likely in the shorter term.
Unlikely	There is a pollution linkage, but circumstances are such that it is improbable that an event would occur even in the very long term.

#### **Risk Matrix**

The risk matrix based on probability and consequence is presented in Table F3:

Table F3: Risk Matrix

		Consequences			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very high	High	Moderate	Moderate / Low
	Moderate Likelihood	High	Moderate	Moderate / Low	Low
	Low likelihood	Moderate	Moderate / Low	Low	Very Low
Pr	Unlikely	Moderate / Low	Low	Very Low	Very Low

#### **Risk Descriptions**

Definitions of the risk categories are presented in Table F4:

Table F4: Description of the classified risks and likely action required

Classification	Definition
Very High Risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, or there is evidence that severe harm to a designated receptor is currently happening.  This risk, if realised, is likely to result in a substantial liability.  Urgent investigation (if not undertaken already) and remediation are likely to be required.
High Risk	Harm is likely to arise to a designated receptor from an identified hazard.  Realisation of the risk is likely to present a substantial liability.  Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term.
Moderate Risk	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild.  Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low Risk	There is a low probability that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

#### **Appendix G** Report Limitations

All conclusions and recommendations made within this report are based upon and limited to the factual information obtained as part of this study. PJA will state where it has utilised and relied upon information obtained by others. It has been assumed that all third-party information provided is true and accurate. No responsibility is accepted by PJA for the accuracy or completeness of such information.

There is a possibility that there may exist on site conditions that could not be identified within the scope of the assessment, or which were not reasonably identifiable from the available information. The conclusions drawn in the report are considered correct, although any subsequent additional information may allow refinement of the conclusions.

The findings of this report represent the professional opinion of experienced environmental scientists and contaminated land specialists. All advice, opinions, assessments and views set out in this Phase 1 report are based on relevant UK standards, codes, construction practices and legislation understood to be current and applicable at the date of this report. Further assessment and a revision of the report may be required should new information come to light or legislation/changes to best practice be introduced after the date of issue of the report.

PJA confirms it offers no duty to update the report in the light of any such information or changes to regulation and / or guidance. PJA does not provide legal advice and the advice of solicitors may also be required.

PJA has prepared the report for the sole use and reliance of the Client. The report may not be used or relied upon by any unauthorised third party without the explicit written agreement of PJA.

The interpretative work undertaken within this report remains the intellectual property of PJA. This information must not be divulged to any other commercial third party without prior written agreement from PJA.
