

Limecote™

Limecote™ has been described as a 'game changing' lime plaster mix.

Non-hydraulic | Breathable | Extraordinarily Flexible | Sustainable | Traditional | Beautiful

Limecote™ is based on a lost English medieval lime plaster recipe, once used commonly, particularly on timber framed buildings. It can still be easily found in 15th to 18th Century buildings – from the humblest thatched cottage to the grandest, high status mansions. It is highly likely that the recipe was used for one of the most extravagant buildings Europe has ever seen: **Nonsuch Palace**, Henry VIII's grandest and most elaborate building project. The building was timber framed and was decorated with 700 high relief stucco panels depicting classical scenes. This recipe has its roots in the Stucco mixes used in the classical world from 3,500BC. The connecting thread through history is the use of calcium carbonate instead of sand, be it marble dust, powdered limestone or crushed chalk.
