Dear Andrew,

Further to my site visit at the above address I can confirm that Cut Above Tree Management Ltd. recommends out the following tree work in the rear garden of the above property:

T1 - Neighbours large Ash tree. Tree is located approximately 4m from the property. It is currently 18m tall and has a spread of 14m. The tree has not been previously pruned. The trees canopy is very dominating and almost touching the surrounding buildings. Reduce canopy back from the buildings to give 3m clearance, (reducing lateral growth from 7m to 4m) and remove lower lateral branches back to trunk over client's garden. Also remove lower lateral limb over client's garden to trunk.

T2 - Large Ash tree on right hand side of middle of garden. Pollard to stem which is 10m in length over garden to approximately 6m from trunk.

If you need any further information, please feel free to contact me on my mobile at the bottom of this page. I look forward to hearing from you. Kind regards
