

Proposed Sash Window Panel Replacement for Flat 1, 144 Clapham Manor Street, London, SW4 6BX

One of the sash window panels in the first floor front elevation window has rotten joints. A specialist sash window company, The Sash Window Workshop, has inspected the window and concluded that the panel is beyond repair. They have proposed to replace the panel with a new one which will be identical in appearance, made from the same material (wood) and be of the same construction technique (timber single glazed putty faced). Note that only the affected panel will be replaced, the rest of the window will be left unaltered.
