PURIFIED AIR CARBON FILTERS
 The second stage of control will be Purified Air's Sitesafe carbon filters; these innovative carbon units measure 594x196x597mm, three combining to 594x594x597mm, directly replacing original carbon blocks whilst providing exactly the same filter performance as an existing full size cell. Their advantage is that they only weigh 18kg each against the 68kg of original blocks.
 This takes the strain out of fitting and servicing, allowing only one engineer to complete the task where two had been previously required.
 Sitesafe carbon filters use panels of activated carbon to remove the malodorous gases within the commercial kitchen extract duct through the process of chemical adsorption. Sitesafe filters, the carbon life span is greatly increased, allowing it to nullify malodours at optimum efficiency for much longer.

HELIOS 400 FAN
 A great multifunctional box fan from German manufacturer Helios Ventilation. This fan is suitable for medium to higher airflow volumes against high resistances in every type of ventilation system. The ..T120 Range is also suitable for the extraction of dirty, humid and hot air up to a maximum of 120Deg C.
 Self-supporting frame construction from aluminium hollow profiles
 Double walled side panels with 20mm thick temperature insulating and flame retardant mineral wool. Steel backward curved centrifugal impeller
 90 Degree or straight through air path possible. Except T120 range which is only 90 degree air path
 T120 range only has motor out of air stream
 Suitable for outdoors with appropriate weather cowl
 All sizes except GB400 T120 can be speed controlled
