Trees within conservation areas

Dear Trees Officer,

As required in your Trees and Hedgerows document I am giving notice of some tree work that I would like to do in my garden as follows to make it more manageable:

Sorbus Aria: Remove this tree which has lost branches and is now very messy and replace it with a Katsura Tree (*cercidiphillum japonica*) in a similar location.

Yew: remove this tree that is growing within a group comprising a conifer (*chamaecyparis -lawsoniana*) and large Viburnum causing overcrowding.

Magnolia (*Grandiflora*): remove the half of the twin trunks that has lost the bark around the base hopefully to protect the apparently healthy other half.

Yours sincerely,

Chris Emmerson
