A picture showing the two bay trees  
The one on the left is bay tree one  
which we would like to reduce the  
canopy. The one on the right is  
Bay tree 2 which is diseased with  
bracket fungus. The two picture  
below show the fruiting bodies at the  
front of the tree and on the right  
hand side of the tree. We believe it would be  
sensible to cut this down sooner rather than later.
