Hello

This is my second attempt to log a planning application to fit an EV charger on my driveway in Hurstbourne Tarrant and I have included many of the other documents and information you requested off me.

I have been able to provide a site location plan, a Biodiversity checklist, a description of works from Podpoint the supplier and installer of the charger and some supporting images of the proposed location of the EV charger itself. There were unable to provide a block plan to scale of 1:5 or 1:2 nor existing and proposed elevations at a scale of 1:5 or 1:1 as this is something they could not do.

I am very reluctant to ask an architect to draw up these plans given the extra expense as well as engaging with a company to provide another Heritage Statement for the works and so I have included the two previous statements drawn up for works on the property over the last few years which were significantly larger in scale than just installing an electric charger. Attached on the follow up email due to size. I have added a short para below that is my own attempt.

[REDACTED] hich I will do as soon as you confirm the documents are in order.

I hope you will find these documents as acceptable for the works to commence.

Many thanks  
Freddy

Heritage Statement:

The proposal to install a vehicle charger to the side of the property is being made in order to replace a diesel vehicle with an electric vehicle which will in turn help with improving air quality and reducing harmful emissions to the environment. The installation will not have any effect on the archaeology or history of the area and will be attached using "insert method". The charging point can be easily removed without causing any damage to the property other than screw holes which can be filled with the relevant material, should the house ever be listed for sale to another buyer. The charging point measures: "insert measurements" which I do not believe will cause a significant impact on the age and beauty of the property nor would I want them to.
