

**Planted areas**

Planted areas are to be rotavated or hand dug with all large stones, weeds and debris removed taking care not to damage the roots of existing trees and shrubs. (Note: Do not rotavate within tree root zones - hand dig only)  
 Planted areas should have 450mm minimum topsoil over free draining sub-base  
 Prior to planting the areas are to be covered with a 50mm layer of suitable compost.

All areas are to be mulched with border bark.

All trees to be properly staked and tied

During construction avoid excessive site traffic and storage of materials, fuel etc on areas which are to be planted.
