

Ground levels – Great Addington House – Proposed tennis court

Existing ground level - North / South Elevation

The ground slopes away from the NNW corner to a level of c.1m from the north west corner to the south east corner.

Proposed ground level - North / South Elevation

The groundworks will level the area such that the soil is taken from the north western corner and moved to the south eastern corner, creating a level which will be c.40cm above the level of the garden and 60cm below the level of the boundary.

The post construction landscaping will result in a gentle slope of around 3.5m in distance away from the north west boundary with an incline of 60cm, and a gentle slope of 4m to the south east with an incline of 40cm to result in a natural landscape fitting within the garden.

Existing elevation - East / West Elevation

The ground slopes down from the north west corner for about 6m along the north boundary, to a level of c. 1m lower.

Proposed elevation - East / West Elevation

The groundworks will level the area such that the soil is taken from the north western corner and moved to the south eastern corner, creating a level which will be c.40cm above the level of the garden and 60cm below the level of the boundary.

The post construction landscaping will result in a gentle slope of around 3.5m in distance away from the north west boundary with an incline of 60cm, and a gentle slope of 4m to the south east with an incline of 40cm to result in a natural landscape fitting within the garden.
