To Whom it may concern,

LETTER OF INTRODUCTION

Sirius Insight (SI) has been tasked by the Joint Maritime Security Centre (JMSC) to deploy mobile and fixed sensor suites along the UK coastline. These sensors will provide valuable information about activity in the maritime environment and as part of a wider cross-government activity to improve awareness of activity at sea, including illegal activity. To provide the best coverage, and most relevant information these sensors need to be positioned along the coastline with good visibility of the UK marine areas. Sirius Insight conducts surveys along the UK coastline to determine suitable sites where these sensors can be deployed. The sensors suites are mobile, temporary and where necessary can be totally self-contained

The Sirius Insight sensor suites will provide data to support the UK Government and Devolved Administrations to have an improved maritime situational awareness and provide improved safety and security to the UK in the maritime domain. The benefit will improve security to the nation as a whole, to maritime operators, and to Law Enforcement in the event of an incident at sea.

Please provide Sirius Insight with assistance on their tasking as appropriate and where you can. If you require further confirmation or clarification, please feel free to contact the undersigned at the email and numbers provided here.

Further information on the JMSC is available at the Government website:
