

92 Ighten Hill park Lane

## Tree Survey

T1, Sycamore

Mature Sycamore, within rear garden at the end of a woodland strip, it has suffered a branch failure, limbs that extend out over the garden are becoming elongated so the recommendation of a crown lift removing one of the limbs and then reducing the end weight of the remaining limbs to reduce the lever effect thus reducing the chance of failure.

T2 Birch,

To the rear of the garden within neighbour's garden but the crown is mainly over the garden of 92. The crown has grown unevenly and blocks out most of the light of the garden of No92, recommend a 20% crown reduction.
