

Brighton and Hove Planning

Ref: 29 Richmond Court

Dear Planning department,

We are proposing to replace the existing single-glazed aluminium frame windows and a balcony door with new UPVC double-glazed windows and door. This will increase the heat retention thus reducing the carbon footprint and will also reduce noise to the flat.

The window configuration will remain the same as will the colour (white).

The replacement will be done by a reputable FENSA registered double-glazing company. I have already received detailed quotations should you wish to view them.

As you may see from the photograph I have included, flat 29 will be the last on this side to replace the old windows. All the other flats have already changed the windows to UPVC.

If you have questions about any aspect of this application or require further information, please do not hesitate to contact me.
