

SOIL MANAGEMENT PLAN:

The proposal has been designed with consideration to the natural topography of the site to preserve the existing contours and therefore creating minimal excavations. Any soil excavated as part of construction works will be kept on site. The site is of such scale that any excavated soil can be spread out to avoid removal from site. The plan below indicates areas where soil will be evenly spread to avoid any significant changes to levels on site, therefore having minimal impact on the existing site levels.

Area of soil relocation
