

Daily discharge calculator for domestic properties

V2.0 July 2019

Use this calculator to work out how much effluent your septic tank or small sewage treatment plant will discharge a day when it's being used to treat the sewage from one or more houses or flats.

Number of properties	<input type="text" value="1"/>	→	Enter the number of properties which are connected to the plant
Number of bedrooms	<input type="text" value="4"/>	→	Enter the total number of bedrooms for all of the properties and press return
Cubic metres a day	<input type="text" value="0.9"/>	→	This is how much treated sewage your plant will discharge a day

For example, if you have 2 houses sharing a septic tank, one with 3 bedrooms and the other with 4, enter 2 for the number of properties, 7 for the number of bedrooms, and this will give you a result of 1.65 cubic metres a day.
