

Flood risk assessment for

Proposal: Installation of new lighting masts and LED to Rugby Training ground.

At: Lydney Recreation, Ground, Swan Road, Lydney, Gloucestershire, GL15 5RU.

The columns will be installed into the ground with 3 cubic meter of concrete, there is no electrical parts in the base of the column as they are all wired from the feeder pillar, so if the area has the potential for flooding no parts will be affected at all, as all cable is water proof. All ducting will be filled in using expanding foam for added protection and water ingress where used.
