

POCKET LIVING SITE AT WOODSIDE PARK TUBE STATION, LONDON

COMPLETION OF ARBORICULTURAL CONSULTATION FOR THE SITE.

ACD Environmental have been asked to finalise arboricultural input for the project at Woodside Park Tube Station. ACD have been retained as the project arboriculturists since October 2018. The author was instructed to visit site to sign off remaining arboricultural protection measures and confirm completion of consultation input.

I have visited site on the following dates, each time in the company of Project Manager Kieth Holt of HG Construction on behalf of Pocket Living;

Wednesday 1st March 2023 ~ To review the boundary construction installation on both the eastern and western boundaries. In addition the above ground slab for Block A was inspected. All these arboricultural sensitive construction measures were as detailed within the supporting package of works.

Thursday 14th December 2023 ~ To sign off site associated arboricultural input following completion of major construction works and commencement of soft landscape works.

Tree protection measures as shown on the approved Tree Protection Plan for the site are no longer required. The completed Site monitoring Proforma has been attached to the note being signed by both myself and Keith Holt . This concludes the arboricultural instruction for ACD Environmental on the site.

Andrew Bigg *RFS (Cert Arb)*
Head of Arboriculture
