

## SHEFFIELD STANDS

Sheffield stands are the most fundamental of cycle parking products. Two cycles can be secured, one on either side with a chain or cable lock. They are available with base plates for surface mounting or with longer legs for below ground fixing into concrete.

Additionally there are options with or without a cross strut, as well as in different diameter tubes.

Normally placed at 800mm intervals, Sheffield stands are a sound, friendly and affordable bicycle parking solution.

All Falco stands are hot dip galvanised to BS EN ISO 1461 and additionally can be powder coated.

Sheffield stands in polyurethane are also available upon request.
