Transfer of portal location plan to stable draughting platform in an attempt to provide pdf copy that will not corrupt scale. Map and scale bar both give accurate 1250 readings.		

Printer settings checked to provide scaled pdf copy.

NOTES:

The failure of both purchased location maps to hold itself to scale has been taken up with the provider as it this contributed to rendering the application invalid on two occasions.

The matter is serious and has been discussed at length with UK Planning Maps.

In response they have advised that the scale of the map has been checked and deemed to be accurate according to the scale provided, however scale bars are not intended to be used as a tool for accurate measurements between distances on a map but are an essential representation to provide the general scale of features within the map area. Local Authorities and Land Registry require these scales to be present on any map provided to them, this provides a visual *indication* of distance on the map.

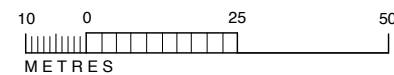

There is a degree of deviation with any measurement, this occurs because of the method used for how it is measured, the measuring tools used and the subject matter in question. All maps are produced from a template and are set up to comply with regulations, these are acceptable for planning purposes and are accepted by local authorities countrywide.

Third issue of map provided by UK Planning Maps used in this re-submission.
