

Supporting Statement

Please find attached some annotated photos of the lime trees, which I have numbered.

The approx height of the trees is 48-50 feet, tree 1 is the largest and needs about 15ft removing from the top. The other trees need about 10 ft removing.

Our neighbours are keen for us to also have some smaller side branches from the sides of the trees that overhang into their garden. We will of course get a professional tree surgeon in to undertake the work.

2

Handwritten purple markings on the tree's canopy, possibly indicating specific branches or areas of interest.
