

## Our Patented Sash Removal System

### Making Future Maintenance Stress Free

For over 33 years we have been installing our unique Sash Removal System - thus avoiding problems such as losing the sash cord in the sash box frame and eliminating the need for scaffolding when painting sash windows.

The system consists of a 'brake' that forms the end of the sash cord and fits within housing in the sides of your sashes. This will ensure that your sash cord will not break free from your sashes and end up lost in the sash box.

Additionally, in order for you to carry out future maintenance on your sash windows, such as painting and deep cleaning, the Sash Removal System enables you to access your sashes and dismantle your window internally, without scaffolding.

Sash Removal System (SRS) is discreetly mounted in the side of the sash, allowing safe and easy removal of both the upper and lower sashes, to give free access to the window box frame, and is not visible either internally or externally during the normal operation of the sash window.

Close up of the brake unengaged and free to move

Close up of brake in it's engaged state
