

Key: Metres (1:500)

- Existing trees and landscaping
- Proposed trees and landscaping
- Proposed linear run of native hedgerow

LOG PYRAMID/PILES (Loggery) (8No)
 Proposed log piles formed ideally from salvaged wood from trimmed trees. Logs are simply part buried with bark attached, located in areas of partial shade and least disturbance.
 A buffer zone should be formed around the pile so the soil and vegetation are protected with the surrounding vegetation not cut ideally between May-September.

HIBERNACULA (4 No)
 Proposed Hibernacula on impermeable ground. Formation of an 'above-ground' mounded design utilised in order to prevent the hibernaculum from flooding. Essentially the mound is constructed from piled up rocks, logs, dead wood and suitable rubble. Soil can be loosely filled between layers and a geotextile membrane over beneath a capping layer of topsoil, turf or moss.

Schwegler wood-concrete BAT BOX 2F (4 No general purpose tree mounted)
 Proposed 4 No 2F Schwegler tree mounted bat wood and concrete boxes. General purpose model proven to be particularly successful for the Common Long-eared Bat (*Plecotus auritus*). Ideal starter box to see if there are bats in the area as it will be readily accepted as a resting place. The spherical interior of the roof area provides an ideal roost for bats. If the box is not occupied after a number of years it is easily converted to a 2M Bird Box by simply changing the front panel. The front panel can be removed for inspection and cleaning purposes. Box supplied with mounting strap and aluminium nails.
