

Proposed Anti Slip Tape on White Bridge Steps

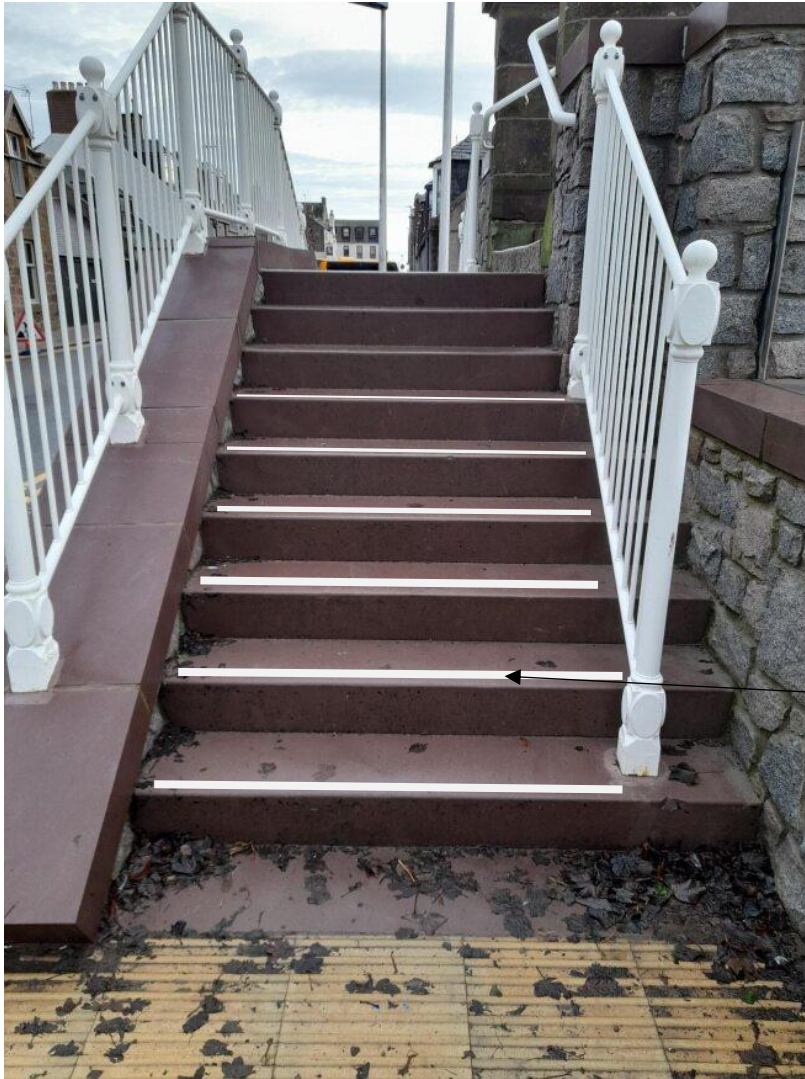

Due to a number of slips and trips on the approach steps up to the White Bridge, Aberdeenshire Council are proposing to install white anti slip tape on the steps. The tape would be 50mm wide and extend the width of each step. It would be set back from the edge of the step by approx 25mm.

The anti slip tape would serve two purposes:

- It would provide a anti slip surface on the edge of the steps, particularly on the original granite steps which have been worn very smooth due to the age and use of the steps.
- It would provide a colour contrast to each step to help increase visibility of the steps for users.
