IMAGO
LESS IS MORE

IMAGO

design Matteo Grotto

LESS VISIBLE FRAME, MORE SPACE TO THE IMAGE.
WITH THE QUALITY OF THE PERFORMANCES BY AGB.

**Imago is the innovative hardware system which
allows to realize the Lift&Slide for wood
with a frame depth less than 2cm.**

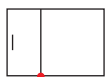

IMAGO

LESS IS MORE

Imago gives to the landscape the main role. Thanks to the minimal design, it extends the space and blends the internal places with the external environment. It expands the possibilities and the design solutions.

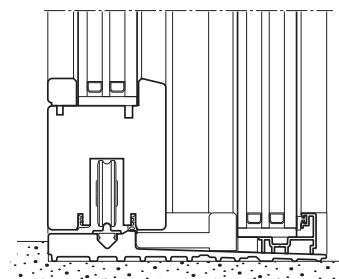

DESIGN

(IN)VISIBLE PROFILE

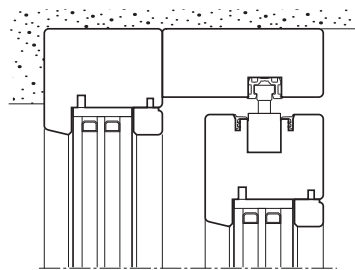

Leaving space to the glass: a room without bounds

The lower transom of the fixed sash has been eliminated.
The glass and the external environment become the center of the room.
A thin aluminium profile creates the glass seat.

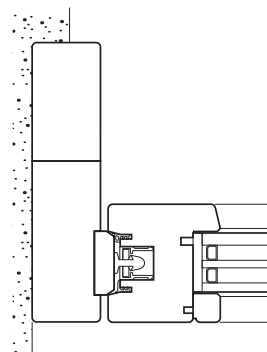

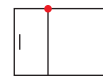

THE ESSENTIAL

ON DETAILS

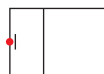

Wood and image only: the hardware disappears on the frame

The sliding top guide has been inserted into the frame to hide every functional element.

A slimmer sash profile

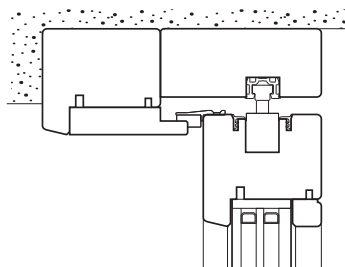

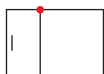

The frame of the sliding sash has been concealed to 74 mm thanks to a reduced backset lock.

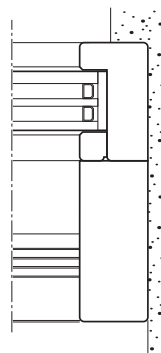

Minimal design, with a technological heart

The thin transom of the frame contains the top sealing profile: no carving is visible.

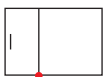

Side point system: the essential without bounds

The glass is built into the jamb of the frame. Thanks to an easy and adequate installation, it blends with the wall.

PERFORMANCES

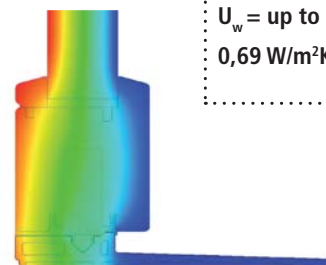

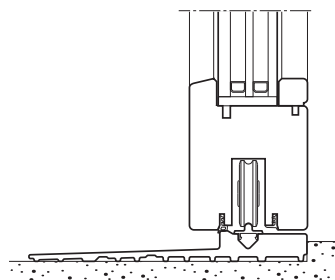

THERMAL INSULATION AND SECURITY

A high performance project without limits

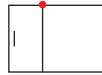

A 25 mm maximum thickness threshold at the same level of the floor. The Climatech threshold offers the minimum visual impact and guarantees incredible thermal performances, thanks to the innovative fiberglass reinforced material.

Imago is a barrier against air, water and wind thanks to the accessories range which have been tested in every condition.

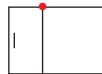

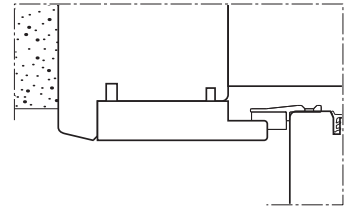

INNOVATIVE DETAILS

FOR ADVANCED
PERFORMANCES

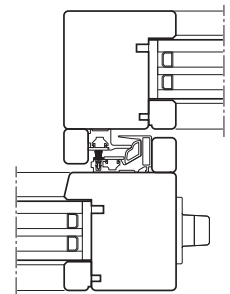

Top sash sealing profile

The aluminium resistance and the insulating power of the sponge. The materials choice of the top sealing profile guarantees the resistance against air and noise abatement.

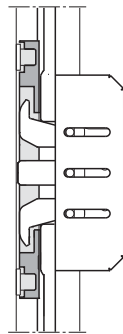

Uni-V central locking profile

The wide working tolerances, allowed by the central point Uni-V, guarantee the declared performances even with the natural deformation of wood. The revolutionary central locking profile avoids every contact between the sash and the frame. The opening movement becomes fluid and silent.

POSEIDON:

A WORLD OF SECURITY

Maximum security lock

The innovative Poseidon lock with two opposite facing hooks and a central bolt offers anti-burglar security levels never known before.

Poseidon concealed security striker

The striker is installed flush to the frame to improve the minimal design of Imago. The wide pressure adjustments allow an easy installation in every condition.

IMAGO

LESS IS MORE

Imago guarantees thermal insulation, resistance against atmospheric agents and anti-burglar security thanks to the integration of the Climatch threshold, the dedicated range of innovative accessories and the Poseidon security lock.

100% wood

100% energy saving

100% made in Italy
