Tree report for x2 Maple trees in Middleton on the Wolds cemetery and minor pruning/general tidy of cherry tree.

I agree that the two trees do need removing. The roots are causing serious damage to the grave stones, making them dislodged. The roots are also becoming a trip hazard for anyone visiting this area of the cemetery.

There are several included unions on both of the trees which cause some concern of the two limbs splitting especially in strong winds. As you can see on some of the pictures I have included there are some large cavities on both of the maples. This has caused deadwood in some of the larger limbs.

General pruning maintenance on Cherry tree in Middleton on the Wolds.

I advise that the cherry tree needs some minor pruning and a general tidy. Some of the branches are rubbing on the telephone wires, these just need trimming back away from the lines. Also, with the weight of the leaves now on the branches it is causing them to be quite low. All this requires is a minor lift and removal/prune of any lower limbs. All work carried out will be done to the BS3998.
