

The summer house (small, built of wood) was also assessed to be of **NEGLIGIBLE** potential value to roosting bats (Table 1) given the absence of bat evidence/PRFs.

Foraging and Commuting Habitat

The site was assessed to be of **MODERATE** quality (Table 2) for foraging/commuting bats. Recommendations with regards to any new lighting scheme are proposed (Section 5).

4.2.2.3 Other Section 41 Mammals

SBIS returned 59 records of Hedgehog *Erinaceus europaeus*, three records of Brown Hare *Lepus europaeus* and five records of Water Vole *Arvicola amphibious*.

It is highly likely that Hedgehogs are occasionally present within the site. Optimal habitats for other Section 41 mammal species are absent from the site and immediate surrounding area. Taking into account the abundance of similar habitats in the vicinity, the potential for adverse impacts to Hedgehog or any other Section 41 mammal species within the site as a consequence of the proposed works, is considered highly unlikely. No further work in relation to other Section 41 mammals is considered necessary and such species are not considered further within this report.

4.2.2.4 Amphibians

Magic returned one granted EPS development licence in relation to GCN within 2km of the site. This licence, located 1.28km northwest of the site, was granted in 2020 and allowed damage and the destruction of a resting place.
