

Tree Report & Description of Work

T1. Lime tree these are large trees for size of the garden they stand in, with broad crown covering almost the whole rear garden, with a common problem associated with lime tree aphid excretion leaves a sticky substance on everything below. Strongly restricting the usable space and enjoyment of the rear garden. A heavy crown reduction Approx 3-4m from tips crown lift 4m above ground level. Would help decrease the crown's spread would dramatically reducing the effected area below. ensuring a more harmonious and enjoyable environment for residents while retain tree.
