1.0 Introduction

- 1.1 This Transport Assessment has been prepared to accompany a planning application by Woolwich Road Limited for the redevelopment of Welling United Football Club, located at Park View Road Football Stadium and 1-3 Park View Road, Welling DA16 1SY (herein referred to as 'the site').
- 1.2 The site is located to the east of Welling town centre and benefits from close proximity to the A207, A221 and A2 as well as a number of bus stops and Welling railway station. The site falls within the administrative boundary of the London Borough of Bexley (LBB), who act as both the planning and highways authority.
- 1.3 The proposal seeks planning permission for the following mixed-use scheme consisting of:
- ▶ 104 New homes;
 - ▶ New sports facility for Welling United FC & Academy;
 - ▶ Multi Purpose 3G Pitch - FIFA Approved;
 - ▶ Approximately 4,000 Ground capacity - combination of seating and standing;
 - ▶ New hospitality areas (for hire) and classrooms for community use;
 - ▶ New club shop/ticket space;
 - ▶ New changing, physio and admin/ management areas;
 - ▶ 6x Blue Badge spaces on site, with a further 2x Blue Badge spaces on the highway;
 - ▶ Introduction of a Car Club with two spaces; and
 - ▶ Independent grade level commercial space.
- 1.4 The application proposals have been subject to pre-application discussions with LBB. The pre-application dialogue has been a key part in developing the proposals for the site and ensuring the assessment of the proposals is appropriate in view of the current planning context. A response to all highway related comments raised is set out in this TA.
- 1.5 This Transport Assessment has been prepared to consider the highway and transportation aspects of the proposals, specifically the proximity of the site to sustainable transport modes, as well as access arrangements, parking impact and trip generation.
- 1.6 The remainder of this Transport Assessment is structured as follows:
- ▶ Section 2 identifies relevant planning Policy;
 - ▶ Section 3 identifies the baseline transport conditions of the area;
 - ▶ Section 4 explains the development proposals;
 - ▶ Section 5 considers the traffic generation associated with the proposals; and,
 - ▶ Section 6 assesses the parking impact of the residential development;
 - ▶ Section 7 assesses the parking implications of the stadium redevelopment;
 - ▶ Section 8 sets out a variety of mitigation measures proposed;
 - ▶ Section 9 responds to pre-application comments raised by LBB; and
 - ▶ Section 10 provides a summary and conclusion.

2.0 Policy Context

2.1 This section summarises relevant policy documents at regional and local level against which the proposed development will be assessed. The most relevant policy documents relating to the study are as follows:

- ▶ National Planning Policy Framework (September 2023);
- ▶ The London Plan 2021 (March 2021);
- ▶ Bexley Local Plan, Adopted 26th April 2023.

National Planning Policy Framework (September 2023)

2.2 The updated National Planning Policy Framework (NPPF) was published in September 2023. The document sets out a presumption in favour of sustainable development that recognises the importance of transport policies in facilitating sustainable development. It also indicates that planning decisions should have regard to local circumstances.

2.3 In promoting sustainable transport, the document identifies at paragraph 105 that:

"The planning system should actively manage patterns of growth in support of these objectives. Significant development should be focused on locations which are or can be made sustainable, through limiting the need to travel and offering a genuine choice of transport modes."

2.4 With regard to transport and development, paragraph 110 of the NPPF states that:

"In assessing sites that may be allocated for development in plans, or specific applications for development, it should be ensured that:

- ▶ *Appropriate opportunities to promote sustainable transport modes can be – or have been – taken up, given the type of development and its location;*
- ▶ *Safe and suitable access to the site can be achieved for all users;*
- ▶ *The design of streets, parking areas, other transport elements and the content of associated standards refer current national guidance, including the National Design Guide and the National Modal Design Code; and*
- ▶ *Any significant impacts from the development on the transport network (in terms of capacity and congestion), or on highway safety, can be cost effectively mitigated to an acceptable degree."*

2.5 Paragraph 111 continues to state:

"Development should only be prevented or refused on highways grounds if there would be an unacceptable impact on highway safety, or the residual cumulative impact on the road network would be severe."

The London Plan (March 2021)

2.6 The London Plan (March 2021) sets out the economic, environmental, transport and social framework for the development of London over the next 20-25 years. With regards transport, the policies pertinent to these proposals are as follows:

2.7 Policy T1 Strategic approach to transport

"A) Development Plans should support, and development proposals should facilitate:

- 1) the delivery of the Mayor's strategic target of 80 per cent of all trips in London to be made by foot, cycle or public transport by 2041*

2) *the proposed transport schemes set out in Table 10.1.*

B) All development should make the most effective use of land, reflecting its connectivity and accessibility by existing and future public transport, walking and cycling routes, and ensure that any impacts on London's transport networks and supporting infrastructure are mitigated."

2.8 Policy T2 Healthy Streets

"A) Development proposals and Development Plans should deliver patterns of land use that facilitate residents making shorter, regular trips by walking or cycling.

B) Development Plans should:

1) promote and demonstrate the application of the Mayor's Healthy Streets Approach to: improve health and reduce health inequalities; reduce car dominance, ownership and use, road danger, severance, vehicle emissions and noise; increase walking, cycling and public transport use; improve street safety, comfort, convenience and amenity; and support these outcomes through sensitively designed freight facilities.

2) identify opportunities to improve the balance of space given to people to dwell, walk, cycle, and travel on public transport and in essential vehicles, so space is used more efficiently and streets are greener and more pleasant.

C) In Opportunity Areas and other growth areas, new and improved walking, cycling and public transport networks should be planned at an early stage, with delivery phased appropriately to support mode shift towards active travel and public transport. Designs for new or enhanced streets must demonstrate how they deliver against the ten Healthy Streets Indicators.

D) Development proposals should:

1) demonstrate how they will deliver improvements that support the ten Healthy Streets Indicators in line with Transport for London guidance

2) reduce the dominance of vehicles on London's streets whether stationary or moving

3) be permeable by foot and cycle and connect to local walking and cycling networks as well as public transport."

2.9 Policy T4 Assessing and mitigating transport impacts

"A) Development Plans and development proposals should reflect and be integrated with current and planned transport access, capacity and connectivity.

B) When required in accordance with national or local guidance, transport assessments/statements should be submitted with development proposals to ensure that impacts on the capacity of the transport network (including impacts on pedestrians and the cycle network), at the local, network-wide and strategic level, are fully assessed. Transport assessments should focus on embedding the Healthy Streets Approach within, and in the vicinity of, new development. Travel Plans, Parking Design and Management Plans, Construction Logistics Plans and Delivery and Servicing Plans will be required having regard to Transport for London guidance.

C) Where appropriate, mitigation, either through direct provision of public transport, walking and cycling facilities and highways improvements or through financial contributions, will be required to address adverse transport impacts that are identified.

D) Where the ability to absorb increased travel demand through active travel modes has been exhausted, existing public transport capacity is insufficient to allow for the travel generated by proposed developments, and no firm plans and funding exist for an increase in capacity to cater for the increased

demand, planning permission will be contingent on the provision of necessary public transport and active travel infrastructure.

E) The cumulative impacts of development on public transport and the road network capacity including walking and cycling, as well as associated effects on public health, should be taken into account and mitigated.

F) Development proposals should not increase road danger."

2.10 Policy T5 Cycling

"A) Development Plans and development proposals should help remove barriers to cycling and create a healthy environment in which people choose to cycle. This will be achieved through:

1) supporting the delivery of a London-wide network of cycle routes, with new routes and improved infrastructure

2) securing the provision of appropriate levels of cycle parking which should be fit for purpose, secure and well-located. Developments should provide cycle parking at least in accordance with the minimum standards set out in Table 10.2 and Figure 10.2, ensuring that a minimum of two short-stay and two long-stay cycle parking spaces are provided where the application of the minimum standards would result in a lower provision.

B) Cycle parking should be designed and laid out in accordance with the guidance contained in the London Cycling Design Standards. Development proposals should demonstrate how cycle parking facilities will cater for larger cycles, including adapted cycles for disabled people.

C) Development Plans requiring more generous provision of cycle parking based on local evidence will be supported.

D) Where it is not possible to provide suitable short-stay cycle parking off the public highway, the borough should work with stakeholders to identify an appropriate on-street location for the required provision. This may mean the reallocation of space from other uses such as on street car parking. Alternatively, in town centres, adding the required provision to general town centre cycle parking is also acceptable. In such cases, a commuted sum should be paid to the local authority to secure provision.

E) Where it is not possible to provide adequate cycle parking within residential developments, boroughs must work with developers to propose alternative solutions which meet the objectives of the standards. These may include options such as providing spaces in secure, conveniently-located, on-street parking facilities such as bicycle hangers.

F) Where the use class of a development is not fixed at the point of application, the highest potential applicable cycle parking standard should be applied."

2.11 Policy T6 Car parking

"A) Car parking should be restricted in line with levels of existing and future public transport accessibility and connectivity.

B) Car-free development should be the starting point for all development proposals in places that are (or are planned to be) well-connected by public transport, with developments elsewhere designed to provide the minimum necessary parking ('car-lite'). Car-free development has no general parking but should still provide disabled persons parking in line with Part E of this policy.

C) An absence of local on-street parking controls should not be a barrier to new development, and boroughs should look to implement these controls wherever necessary to allow existing residents to maintain safe and efficient use of their streets.

D) The maximum car parking standards set out in Policy T6.1 Residential parking to Policy T6.5 Non-residential disabled persons parking should be applied to development proposals and used to set local standards within Development Plans.

E) Appropriate disabled persons parking for Blue Badge holders should be provided as set out in Policy T6.1 Residential parking to Policy T6.5 Non-residential disabled persons parking.

F) Where provided, each motorcycle parking space should count towards the maximum for car parking spaces at all use classes.

G) Where car parking is provided in new developments, provision should be made for infrastructure for electric or other Ultra-Low Emission vehicles in line with Policy T6.1 Residential parking, Policy T6.2 Office parking, Policy T6.3 Retail parking, and Policy T6.4 Hotel and leisure uses parking. All operational parking should make this provision, including offering rapid charging. New or re-provided petrol filling stations should provide rapid charging hubs and/or hydrogen refuelling facilities.

H) Where electric vehicle charging points are provided on-street, physical infrastructure should not negatively affect pedestrian amenity and should ideally be located off the footway. Where charging points are located on the footway, it must remain accessible to all those using it including disabled people.

I) Adequate provision should be made for efficient deliveries and servicing and emergency access.

J) A Parking Design and Management Plan should be submitted alongside all applications which include car parking provision, indicating how the car parking will be designed and managed, with reference to Transport for London guidance on parking management and parking design.

K) Boroughs that have adopted or wish to adopt more restrictive general or operational parking policies are supported, including borough-wide or other area-based car-free policies. Outer London boroughs wishing to adopt minimum residential parking standards through a Development Plan Document (within the maximum standards set out in Policy T6.1 Residential parking) must only do so for parts of London that are PTAL 0-1. Inner London boroughs should not adopt minimum standards. Minimum standards are not appropriate for non residential use classes in any part of London.

L) Where sites are redeveloped, parking provision should reflect the current approach and not be re-provided at previous levels where this exceeds the standards set out in this policy. Some flexibility may be applied where retail sites are redeveloped outside of town centres in areas which are not well served by public transport, particularly in outer London."

2.12 In relation to residential car parking, Policy T6.1 of the London Plan states:

A. "New residential development should not exceed the maximum parking standards set out in Table 10.3. These standards are a hierarchy with the more restrictive standard applying when a site falls into more than one category.

B. Parking spaces within communal car parking facilities (including basements) should be leased rather than sold.

C. All residential car parking spaces must provide infrastructure for electric or Ultra-Low Emission vehicles. At least 20 per cent of spaces should have active charging facilities, with passive provision for all remaining spaces.

D. Outside of the CAZ, and to cater for infrequent trips, car club spaces may be considered appropriate in lieu of private parking. Any car club spaces should have active charging facilities.

E. Large-scale purpose-built shared living, student accommodation and other sui generis residential uses should be car-free.

F. The provision of car parking should not be a reason for reducing the level of affordable housing in a proposed development.

G. Disabled persons parking should be provided for new residential developments. Residential development proposals delivering ten or more units must, as a minimum:

1. ensure that for three per cent of dwellings, at least one designated disabled persons parking bay per dwelling is available from the outset
2. demonstrate as part of the Parking Design and Management Plan, how an additional seven per cent of dwellings could be provided with one designated disabled persons parking space per dwelling in future upon request as soon as existing provision is insufficient. This should be secured at the planning stage.

H. All disabled persons parking bays associated with residential development must:

1. be for residents' use only (whether M4(2) or M4(3) dwellings)
2. not be allocated to specific dwellings, unless provided within the curtilage of the dwelling
3. be funded by the payment of a commuted sum by the applicant, if provided on-street (this includes a requirement to fund provision of electric vehicle charging infrastructure)
4. count towards the maximum parking provision for the development
5. be designed in accordance with the design guidance in BS8300vol.1
6. be located to minimise the distance between disabled persons parking bays and the dwelling or the relevant block entrance or lift core, and the route should be preferably level or where this is not possible, should be gently sloping (1:60-1:20) on a suitable firm ground surface."

2.13 Table 10.3, maximum residential parking standards has been replicated below in table 2.1 for ease of reference:

Location	Number of Beds	Maximum parking provision
Outer London PTAL 2-3	1-2	0.75 spaces per dwelling
Outer London PTAL 2-3	3+	Up to 1 space per dwelling

Table 2.1 – London Plan table 10.3 maximum parking standards

2.14 Table 10.2, minimum residential parking standards has been replicated below in table 2.2 for ease of reference:

Use Class	Long-Stay	Short-Stay
Dwellings all	1 space per studio or 1 person 1 bedroom dwelling	5 to 40 dwellings: 2 spaces Thereafter: 1 space per 40 dwellings
	1.5 spaces per 2 person 1 bedroom dwelling	
	2 spaces per all other dwellings	

Table 2.2 – London Plan table 10.2 minimum cycle parking standards

Bexley Local Plan, Adopted 26th April 2023

2.15 Planning Applications within Bexley are currently assessed against the policies contained within the LBB Local Plan. A summary of the transportation policies which are relevant to the proposal are as follows:

2.16 Policy DP22, Sustainable transport states:

Walking

identify and implement accessible, safe and convenient direct walking routes to Town Centres, transport nodes and other key destinations;

- ▶ *promote and improve pedestrian wayfinding;*
- ▶ *provide for the undertaking of audits to ensure that the existing pedestrian infrastructure is suitable for its proposed use and that new development improves pedestrian amenity;*
- ▶ *encourage a higher quality pedestrian and street environment for all users through the promotion of healthy streets and integrated communities;*
- ▶ *ensure residential streets encourage children to play out;*

Cycling

- ▶ *provide secure, integrated, convenient and accessible cycle parking facilities in line with the standards set out in the London Plan, as a minimum;*
- ▶ *provide on-site changing facilities, including lockers and showers for cyclists, where appropriate;*
- ▶ *contribute positively to an integrated cycling network for London by providing infrastructure that is safe, comfortable, attractive, coherent, direct and adaptable;*
- ▶ *provide links to existing and planned cycle infrastructure projects including the Council's strategic quietways and cycleways network;*

Public Transport Network

- ▶ *allocate road space and provide high level of priority on existing or proposed routes;*
- ▶ *ensure good access to public transport networks;*
- ▶ *ensure that all parts of the network can be used safely, easily and with dignity by all;*
- ▶ *ensure direct, safe, accessible and pleasant walking routes to stops;*
- ▶ *ensure standing, garaging and drivers' facilities are provided where needed;*
- ▶ *improve interchange between different modes of transport;*

Shared Mobility

- ▶ *provide electric vehicle charging infrastructure in line with London Plan minimum standards, to be made publicly available where possible;*
- ▶ *provide spaces for car clubs/pool cars, to be made publicly available where possible; and*
- ▶ *ensure compatibility with recognised providers of both services."*

2.17 Policy DP23, Parking Management states:

"In applying the principles of sustainable development in line with Policy SP1, the Council will seek to balance the need for parking and the environmental, economic and social impacts of traffic movement and parked vehicles. Therefore, proposals for residential development will be expected to provide parking within the lowest applicable maximum London Plan standards ..."

2.18 Policy DP26, Waste management in new developments states:

"... Other residential developments

- ▶ *there is adequate space within each residential property for the temporary storage of waste generated by that residence allowing for the separate storage of recyclable materials; and*
- ▶ *there is adequate external storage space for waste, including separate recyclables, pending its collection.*

Summary

- 2.19 On the basis of the above review, it is evident that the location of new development in relation to sustainable modes of transport is an important consideration when assessing the acceptability of a proposed development. Further, developers are required to provide parking at a level that will strike a balance between encouraging the uptake of more sustainable modes of transport whilst accommodating the likely demands associated with the site.
- 2.20 The following sections of this report therefore review the accessibility of the site and evaluate whether the development proposals will encourage the use of sustainable modes of transport. In addition to this, a further assessment has been undertaken to establish the likely impact of the proposals upon the local highway network.

3.0 Baseline Conditions

Overview

3.1 So that the context of the site can be established, a review of the study area has been undertaken. The following text provides a summary of the results of this review and makes reference to the location of the site and current use of the site.

Site Details

3.2 The site is located to the east of Welling town centre, approximately 1.4km from Welling railway station. The surrounding area can be characterised as mainly residential in nature, with a number of local amenities within a short walk from the site. The location of the site is shown in Figure 2.1 below.

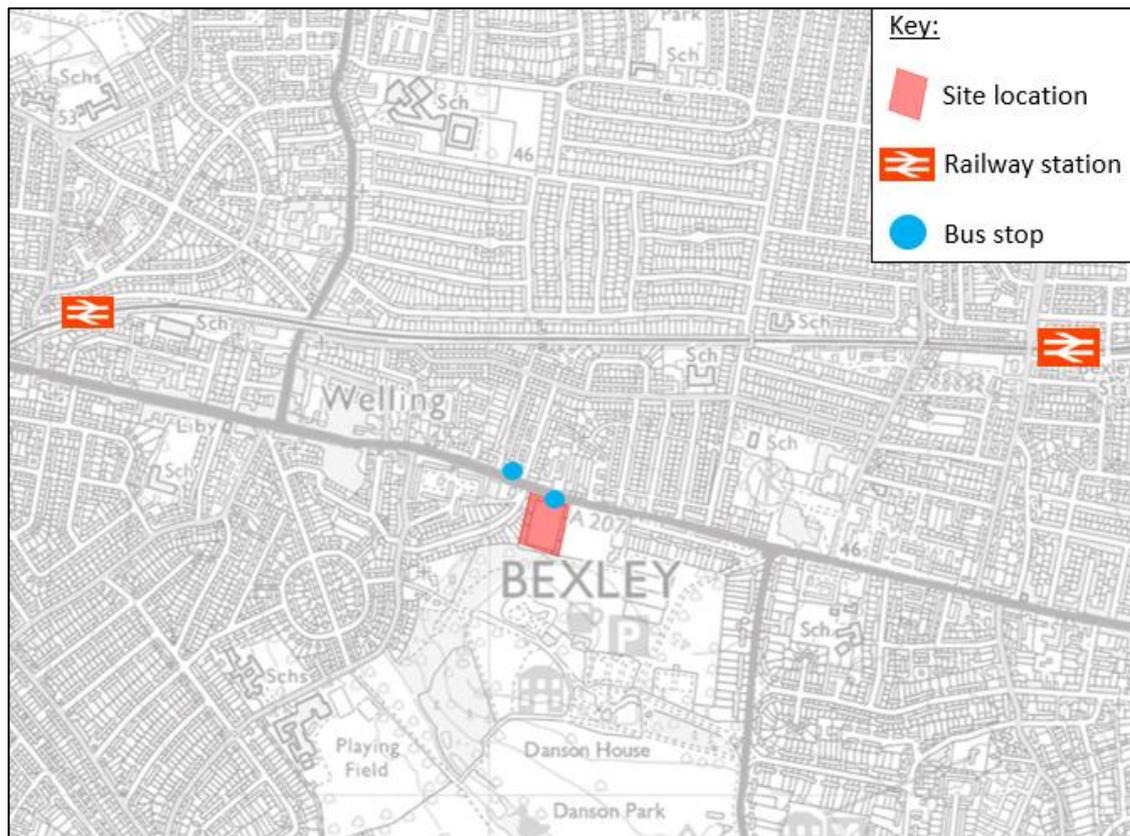

Figure 3.1: Site Location Plan

Existing Highway Network

3.3 Park View Road is a two-way single carriageway subject to 30 miles per hour speed limit. Park View Road connects west to Welling town centre and east to Bexleyheath.

Accessibility of the Site by Non-Car Modes

3.4 It is generally accepted that walking and cycling provide important alternatives to the private car and should be encouraged to form part of longer journeys via public transport. The Chartered Institution of Highways and Transportation released two documents, 'Planning for Walking' in April 2015 and 'Planning for Cycling' in October 2014. The documents provide an insight into the sustainable methods of transport, including:

- ▶ "Across Britain about 80% of journeys shorter than 1 mile are made wholly on foot...but beyond that distance cars are the dominant modes" (Planning for Walking, 2015).
- ▶ "Majority of cycling trips are used for short distances, with 80% being less than five miles and with 40% being less than two miles" (Planning for Cycling, 2014).

3.5 The NPPF recognises that "the transport system needs to be balanced in favour of sustainable transport modes, giving people a real choice about how they travel". Furthermore, Manual for Streets identifies 'walkable neighbourhoods' as "having a range of facilities within 10 minutes' (up to about 800m) walking distance of residential areas which residents may access comfortably on foot".

3.6 Within Manual for Streets, it is noted that 800 metres is not considered the maximum walking distance for pedestrians, highlighting that walking can replace short car trips, particularly those under 2 kilometres. The National Travel Survey 2020 (NTS) also noted that "81% of all trips under one mile are walks", making it the most frequent mode of travel for very short distances.

Accessibility on Foot and by Cycle

3.7 The site is accessible on foot via footways on both sides of the A207 providing a continuous lit route to both Welling and Bexleyheath town centres. There are dropped curbs and tactile paving are present at crossing points to aid with accessibility. A pedestrian refuge crossing is provided approximately 24 metres East of the site entrance with dropped curbs and tactile paving. An additional pedestrian refuge crossing is provided 90 metres West of the site entrance with tactile paving and dropped curbs.

3.8 The GIS software TRACC has been used to calculate the possible walking distance over a 25-minute period utilising the average adult walking speed of 4.8 kmh. This is shown in **Appendix A** and highlights the accessibility of the local area by foot.

3.9 There are on-road cycle lanes provided on Park View Road across the site frontage. The local highway network is also considered suitable for cycling due to the relatively low speed limit and flat topography. National Cycle Route 1 is located 7 kilometres north of the site along the Thames Path. The London Cycle Network Route 19 is located north of the site upon Westbrooke Road running parallel to Park View Road.

3.10 The GIS software TRACC has been used to show the 5km radius of which it is deemed an average adult would cycle to access a place. This is shown in **Appendix B** and highlights the accessibility of the surrounding area by cycle.

Accessibility by Public Transport

3.11 As illustrated in Figure 3.1 the nearest bus stops are located on Park View Road approximately 50 metres (1 minute walk) east and west of the site. A summary of the frequent bus services from these stops are displayed in Table 3.1 below.

Service	Destinations Served	Approximate Frequency		
		Mon-Fri	Sat	Sun
89	Lewisham – Blackheath – Vanbrugh Park – Welling – Bexleyheath – Barnehurst – Slade Green	1 every 15 minutes	8 an hour	1 every 20 minutes
96	Bluewater Shopping Centre – Dartford – Bexleyheath – Welling – Plumstead – Woolwich	1 every 10 minutes	1 every 10 minutes	1 every 11 minutes
486	North Greenwich – Greenwich – Woolwich – Welling – Bexleyheath	1 every 10 minutes	1 every 15 minutes	1 every 15 minutes
B16	Bexleyheath – Welling – Falconwood – Eltham – Blackheath	1 every 15 minutes	1 every 15 minutes	2 an hour
N89 (Night Bus)	Trafalgar Square – Covent Garden – Temple – Blackfrairs – Elephant and Castle – Walworth – Camberwell – Peckham – Deals Gateway – Lewisham – Blackheath – Welling – Bexleyheath – Barnehurst – Slade Green – Erith	Night Bus service between 23:45-04:45		

Table 3.1 – Local Bus Services

3.12 Welling railway station is the nearest train station located approximately 1.4 kilometres (18 minute walk) west of the site. Welling railway station benefits from 28 cycle spaces, located in a secure lockable cycle storage and 117 car parking spaces with 2 accessible spaces. A summary of the direct rail services is shown below in Table 3.2.

Service	Destinations Served	Approximate Frequency		
		Weekday AM	Weekday PM	Saturday Daytime
Dartford	Welling – Bexleyheath – Barnehurst – Dartford	5 an hour	5 an hour	5 an hour
Dartford	Welling – Bexleyheath – Barnehurst – Slade Green – Dartford	Every 30 minutes	Every 30 minutes	Every 30 minutes
London Victoria	Welling – Falconwood – Eltham – Kidbrooke – Blackheath – Lewisham – Nunhead – Peckham Rye – Denmark Hill – London Victoria	Every 30 minutes	Every 30 minutes	1 every hour
London Bridge	Welling – Falconwood – Eltham – Kidbrooke – Blackheath – Lewisham – St Johns – New Cross – London Bridge	No service	No service	1 every hour
London Cannon Street	Welling – Falconwood – Eltham – Kidbrooke – Blackheath – Lewisham – St Johns – New Cross – London Bridge – London Cannon Street	Every 30 minutes	Every 30 minutes	Every 30 minutes
London Charing Cross	Welling – Falconwood – Eltham – Kidbrooke – Blackheath – Lewisham – London Bridge – London Waterloo (East) – London Charing Cross	Every 30 minutes	Every 30 minutes	1 every hour
Woolwich Arsenal	Welling – Bexleyheath – Barnehurst – Slade Green – Erith – Belvedere – Abbey Wood – Plumstead – Woolwich Arsenal	Every 30 minutes	Every 30 minutes	Every 30 minutes

Table 3.2 – Local Rail Services

Access to Local Amenities

3.13 A number of local facilities are available within the surrounding area of the site and are accessible by foot or cycle. Both Welling and Bexleyheath town centres accommodate a large number of chain and independent shops, cafes and restaurants as well as a selection of food retail stores. There is also doctor's surgeries, pharmacies, dentists, opticians, as well as a number of schools available within walking distance of the site.

3.14 Table 3.3 below sets out the educational facilities located within an acceptable walking distance of the site.

Amenity	Distance from Site (metres)	Walking Time from Site (minutes)	Cycling Time from Site (minutes)
ALP Parkview Academy	110 metres	1-minute	1-minutes
The Bexley Day Nursery	280 metres	4-minutes	1-minute
Foster's Primary School	550 metres	7-minutes	3-minutes
Aspire Academy Bexley	550 metres	8-minutes	3-minutes
Learning and Enterprise College	850 metres	11-minutes	4-minutes
Bexley Grammar School	850 metres	11-minutes	4-minutes
Monkey Puzzle Welling Day Nursery	1,000 metres	13-minutes	3-minutes
St Stephen's Catholic Primary School	1,000 metres	14-minutes	3-minutes
Welling School	1,100 metres	15-minutes	3-minutes

Table 3.1: Educational Amenities

3.15 Table 3.4 below sets out the food retail facilities located within an acceptable walking distance of the site.

Amenity	Distance from Site (metres)	Walking Time from Site (minutes)	Cycling Time from Site (minutes)
Tesco Superstore	500 metres	7-minutes	1-minute
Morrisons	650 metres	9-minutes	2-minutes
Lidl	800 metres	11-minutes	4-minutes
Sainsbury's Local	1,400 metres	19-minutes	5-minutes
Co-op Food – Pickford Lane	1,500 metres	21-minutes	6-minutes
Asda Bexleyheath Superstore	1,800 metres	24-minutes	5-minutes

Table 3.2: Food Retail Amenities

3.16 Table 3.5 below sets out the healthcare facilities located within an acceptable walking distance of the site.

Amenity	Distance from Site (metres)	Walking Time from Site (minutes)	Cycling Time from Site (minutes)
Second Sight Opticians	550 metres	7-minutes	1-minute
Welling Corner Dental Practice	650 metres	9-minutes	2-minutes
Welling Medical Practice	750 metres	10-minutes	3-minutes
Hook Lane Dental Care	800 metres	11-minutes	4-minutes
Bexley Group Practice	1,000 metres	13-minutes	3-minutes
Ingleton Avenue Surgery	1,400 metres	18-minutes	5-minutes
Lloyds Pharmacy	1,600 metres	22-minutes	6-minutes
Browne's Chemist	1,800 metres	25-minutes	10-minutes

Table 3.3: Healthcare Amenities

- 3.17 Tables 3.3 – 3.5 emphasise the accessibility of amenities to the site. Attached as **Appendix C** is a full amenities plan which illustrates the wider local amenities within the proximity of the site.

Road Safety Review

- 3.18 In order to provide a full and comprehensive review of the existing highway network and traffic conditions, Personal Injury Collision (PIC) data surrounding the site has been acquired from Cashmap.com for the most recent 5-year period. A total of ten incidents occurred within the immediate are of the site resulting in a mix of fatal, severe, and slight injuries.
- 3.19 There is a cluster of five accidents at the junction of Park View Road and Roseacre Road, four of which are classed as slight and one serious. There is another cluster of three accidents on Park View Road adjacent to Lewis Road, one slight, one serious and one fatal. There is also one accident approximately 100 metres from the site on Roseacre Road.
- 3.20 Considering the car-free nature of the proposals, it is not anticipated that the proposals will negatively impact on the above accident record. Further mitigation will be introduced through an Event Management Plan to effectively control activity on match days.

Summary

- 3.21 The above demonstrates that the site is accessible by transport modes that have the potential to reduce the reliance upon the private car. In this regard, it is considered that the location of the site accords with paragraphs 105 of the National Policy Framework as set out in Section 2 and as such gives future residents a genuine choice about how they travel.

4.0 Development Proposals

Overview

- 4.1 The following text outlines details of the development proposals and summarises how it will be accessed along with providing details of the associated parking and servicing strategies.

Development proposals

- 4.2 The proposal seeks planning permission for the redevelopment of the existing development for the following mixed-use scheme consisting of:

- ▶ 104 New homes;
- ▶ New sports facility for Welling United FC & Academy;
- ▶ Multi Purpose 3G Pitch - FIFA Approved;
- ▶ Approximately 4,000 Ground capacity - combination of seating and standing;
- ▶ New hospitality areas (for hire) and classrooms for community use;
- ▶ New club shop/ticket space;
- ▶ New changing, physio and admin/ management areas;
- ▶ 6x Blue Badge spaces on site, with a further 2x Blue Badge spaces on the highway;
- ▶ Introduction of a Car Club with two spaces; and
- ▶ Independent grade level commercial space.

- 4.3 The architect's layout for the site is attached at **Appendix D**. The split of residential flats is summarised in Table 4.1 below.

Type of Dwelling	No. of Units
1-bed unit	24
2-bed unit	61
3-bed unit	19
Total	104

Table 4.1 – Schedule of Accommodation

Access Arrangements

- 4.4 The site currently accommodates two vehicular access points directly onto Park View Road. It is proposed to remove the western access which currently serves the on-site car park, with the eastern access to remain as an emergency access point onto the pitch.
- 4.5 There are currently two existing crossovers on Roseacre Road which serve a small car park. Both crossovers will be removed, with a central access proposed to serve a residential car park.
- 4.6 All alterations to the public highway will be addressed as part of a Section 278 legal agreement.

4.7 Various pedestrian entrances are provided along the site boundary for residents, with separate access for spectators on match days. The carriageway fronting the site will be narrowed by one metre to offer improved pedestrian access on match days, especially when spectators are likely to congregate on the highway. This, alongside the setting back of the building frontage will offer a material improvement on pedestrian safety on Park View Road. The set-back of the building will extend to a maximum of a metre, with narrow sections in certain locations. With an existing footway width of three metres, the width of the footway will extend to a maximum of five metres for the majority of the site frontage.

Residential Car Parking Provision

- 4.8 The proposal includes six car parking spaces for disabled users within the car parking area accessed via Roseacre Road. A further two parking spaces for disabled users are proposed on Roseacre Road, immediately adjacent to the site. No standard parking spaces are proposed on site, and therefore the scheme would classify as a 'car-free' scheme in respect of the 2021 London Plan.
- 4.9 As per Policy T6 of the London Plan, at least 20 percent of any parking spaces provided should have active electric vehicle charging point from the outset. The development will adhere to the policy and provide sufficient EV parking with 20% active and 80% passive provision.
- 4.10 It is proposed to provide two car club bays on the surrounding road network. The location of each bay is addressed as part of wider discussions with Enterprise Car Club, as set out in Section 6 of this report.
- 4.11 No car parking is proposed for the football stadium, which is addressed later in this report.
- 4.12 The London Plan suggests that car parking for disabled residents should be provided at a ratio of 3% of all units from the outset, with the ability to provide up to 10% in the future. With 104 units proposed, this would translate to 11 spaces (rounded up). As noted above, the proposals include a total of six spaces for disabled users on site, with a further two proposed on-street. Whilst below the suggested provision in the London Plan, it must be reiterated that not all residents will own a car. Therefore not all occupiers of a wheelchair accessible unit will require a parking space. A summary of car ownership is shown in Table 4.2 below, with further information provided within Section 6 of this report.

Number of Cars	Car Ownership	
	Percentage	Applied to Scheme
No Car	44.2%	46
One Car	46.8%	49
Two Cars +	9.0%	9
-	100%	104

Table 4.2: Car Ownership Census Data

4.13 Table 4.2 suggests that some 44% of units in the surrounding area do not own a car. Based on the above, demand for an accessible space would likely be seven cars for 11 wheelchair accessible units. This can be accommodated either on site or within the two new spaces proposed on-street. Therefore no further accessible parking is considered necessary to meet the demands of the development.

Residential Cycle Parking Provision

4.14 The minimum residential cycle parking standards applicable to the site are set out in the 2021 London Plan. The standards are compiled in Table 4.3 below.

Type of Dwelling	No. of Long Stay Spaces Required	No. of Short Stay Spaces Required
1-bed unit	1.5 spaces	1 Space per 40 units
2-bed unit	2 spaces	
3-bed unit	2 spaces	

Table 4.3 – Cycle Parking Requirements according to 'The London Plan'

4.15 When applied to the development, the long-stay requirement is as set out in Table 4.4 below.

Type of Dwelling	No. of Long Stay Spaces Required
1-bed unit	36
2-bed unit	122
3-bed unit	38
Total	196 spaces

Table 4.4 – Cycle Parking Provision

4.16 Based on the minimum cycle parking standards for the site and the number of dwellings proposed, the site will require 196 long stay parking spaces. The proposals include 202 long stay cycle spaces within the basement, which exceeds the above requirement.

4.17 Three further short stay cycle stands (to accommodate six spaces) will be provided adjacent to the site, which meets the requirements of the London Plan standards.

4.18 126 spaces will be arranged in a two-tier system, with a further 66 long-stay spaces comprised of Sheffield stands (33 racks). This adheres to the London Cycling Design Standards (LCDS) of providing no more than 70% of spaces as two-tier racks. Further space is provided to provide 5 spaces for disabled users and 5 oversized bikes. Figure 4.1 below illustrates the basement area within which cycle storage will be provided. Lift access will be provided to all spaces, ensures suitable access is maintained to promote the uptake of cycling. In addition, at the request of LBB an electric cycle rail will be accommodated on one stairwell to aid residents in moving their bike to and from the basement should the lift be out of order. Spacing of the cycle stands complies with LCDS spacing requirements set out in Figure 8.1 of the LCDS.

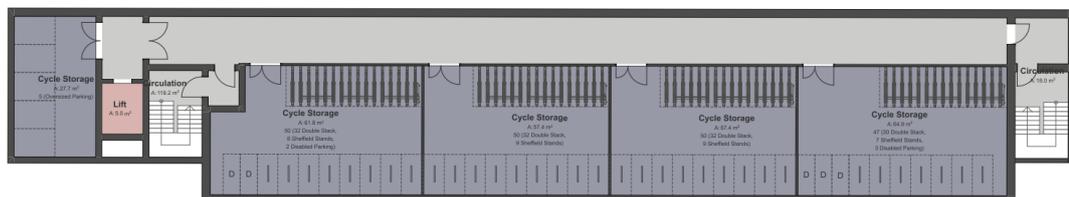

Figure 4.1 – Basement Cycle Parking Arrangement

Stadium Parking/Drop-off Arrangements

- 4.19 The proposals do not provide any car parking for the stadium. Whilst servicing aspects can be dealt with by providing a dedicated loading bay on Park View Road (detailed below), it is not anticipated that the stadium will generate a material number of car trips associated with staff. Players will be encouraged to travel by non-car modes of travel where possible. In any event the current stadium has limited car parking on site which is limited to specific users.
- 4.20 Woolwich Road Limited is actively seeking to secure off-site car parking spaces on event days to minimise the impact of spectators parking on-street. Figure 4.2 below illustrates those potential parking locations.

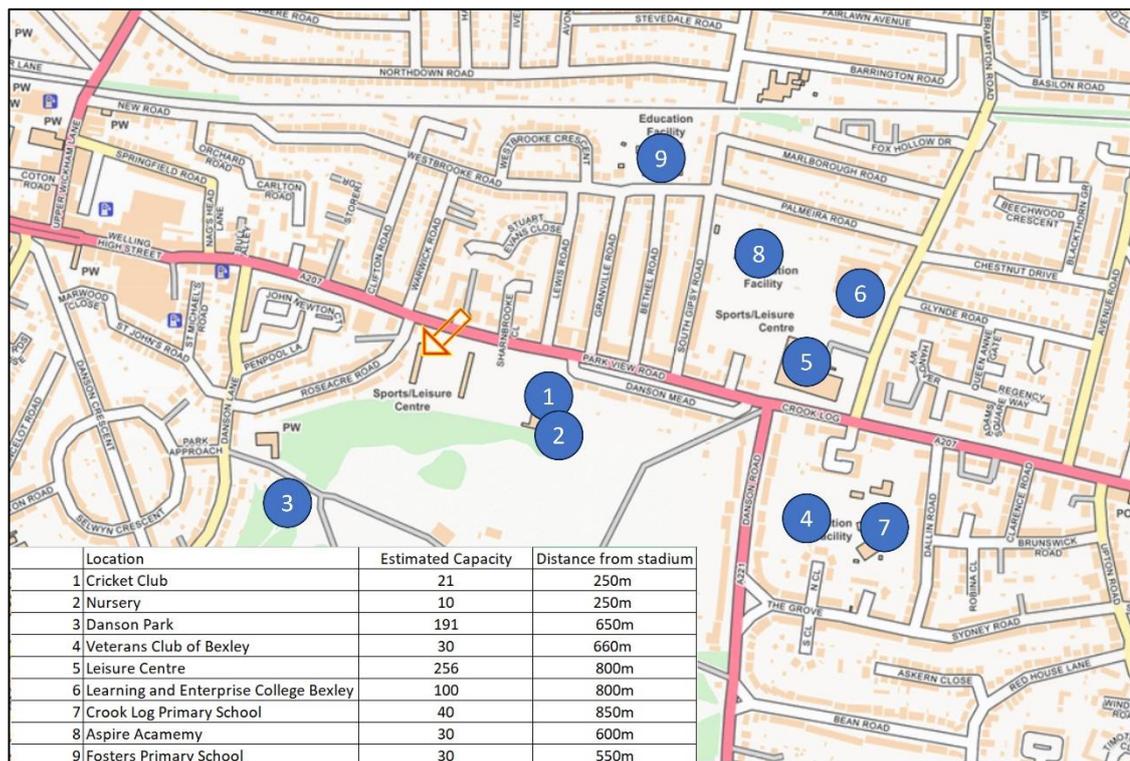

Figure 4.2 – Off-Street Car Parking Locations

- 4.21 The above totals a potential of circa 708 car parking spaces, albeit it is noted that the Leisure Centre will be reliant upon retaining car parking for its customers. Despite this, many other locations (such as Danson Park and the College) should be able to offer extensive parking opportunities off-street.
- 4.22 It is envisaged that Woolwich Road Limited will secure the rights to park away team coaches in one of the above locations, most likely Danson Park or the College. Any agreement will be secured in principle in advance of the eventual planning submission. As of November 2023 the Learning and Enterprise College has confirmed that they would be happy to provide circa 100 car park spaces. Further details will be provided as part of any forthcoming planning application, and the applicant intends to continue discussions with others car park operators.
- 4.23 The car parks will also offer parking for both home and away fans, with incentives to encourage them to use these car parks as opposed to parking on-street.
- 4.24 A total of 75 cycle parking spaces will be provided below one of the eastern stands in a secure location. Cycle parking will be monitored by staff to ensure it is not vandalised.

Servicing Arrangements

- 4.25 It is proposed that there will be a new servicing bay provided on Park View Road, adjacent to the frontage of the football stadium. This will enable servicing vehicles to stop temporarily while they unload and prevent conflict with other traffic.
- 4.26 A Traffic Management Order will be required to amend the existing road markings and ensure that the bay is utilised for short-stay use only. It is envisaged that the bay will operate as 'Loading Only' with a limit on the maximum duration of stay (potentially 30 minutes). This will aid in ensuring turnover of the space to maximise usage for both the residential flats and the football stadium.
- 4.27 The existing bus stop and shelter located on Park View Road adjacent to the football stadium will be retained in its existing location. It is envisaged that the bus shelter will be relocated to the rear of the footway to aid pedestrian movement, which will be addressed in detail as part of any Section 278 agreement.
- 4.28 The drawing attached as **Appendix E** illustrates the proposed loading bay, alongside the retained bus stop and footway widening. It also illustrates the revised location of the existing pedestrian crossing further west, which has been relocated in order to provide sufficient space between the bus cage and loading bay. This is considered appropriate, as there is an opportunity to upgrade an existing central island further west without impacting on carriageway widths or the free flow of traffic. This is shown as a signalised crossing point at the request of LBB. The above appendix does also show the existing crossing point retained in its current location, albeit upgraded to a signalised crossing. This is possible without interfering with the loading bay, although it is preferable to relocate the crossing to avoid the crossing being close to the loading bay.
- 4.29 Vehicle tracking of appropriate vehicles (HGVs and a bus) are included within **Appendix F**. This highlights how all vehicles can remain within the westbound carriageway despite the one metre reduction in the effective carriageway width.
- 4.30 Comments have been raised in respect of access to the ability for a car transporter to continue servicing a car sales centre on the northern side of Park View Road. Currently this takes place east of the bus stop fronting the site. By retaining the bus stop in its current location, it is considered that the transporter can stop in its current location. There is sufficient space for all vehicles (including a bus) to pass around a transporter if stopped in the highway, and indeed this is an existing situation that the proposals would not alter.
- 4.31 Refuse storage will be provided on site to meet the needs of both the residential flats, as well as the commercial unit and club storage requirements. Figure 4.3 below illustrates six different bin storage locations at ground floor level. All bin store doors will open out onto land under the applicants control and not highway land.

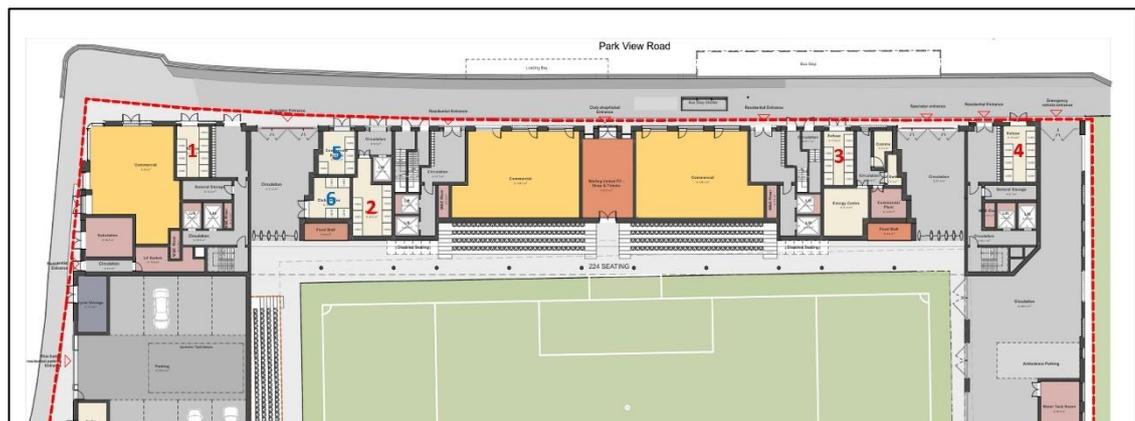

Figure 4.3 – Location of Bin Stores

- 4.32 A Draft Delivery and Servicing Management Plan will be prepared, and will outline the proposed delivery and servicing strategy for the operational site. This is described in more detail later in this TA.

Emergency Access

- 4.33 The eastern existing access will be retained to provide access for emergency vehicles onto the pitch. There is sufficient space to enable an ambulance to enter the pitch via this access. In addition, a permanent ambulance parking space is provided within the car park accessed via Roseacre. This ensures access for an ambulance at all times (when not required on the pitch).

Typical Use of the Stadium

- 4.34 The new 3G pitch at Welling will not only be used by children in girls and boys football teams from 5-16 following the traditional grass roots pathway, but for children who aren't in teams. Community sessions will be run with an open invite to everyone so children at every age can still enjoy being able to play football with their friends.
- 4.35 The national initiatives of Walking Football, Man V Fat and Wildcats will give minority groups of people the chance and the opportunity to play football for their mental health, wellbeing and social interaction, and will be hosted at the ground.
- 4.36 The local community can book monthly football sessions, with subscriptions, and will be able to enjoy playing football after work.
- 4.37 Groups such as Frame Football and Spirit of Football will have a safe and stable environment to enjoy playing football.
- 4.38 During the day, the pitch can be used by local schools when "mud stops play" as so often happens now in our UK winters to protect the school fields. Local inter-school tournaments can be held as well as wider county competitions.
- 4.39 The proposals will therefore be a hub for the community.
- 4.40 Table 4.5 below summarises the expected change in the use of the pitch. This compares the existing situation to highlight the likely increase in the use of the stadium post-development.

Criteria	Existing Situation	Proposed Changes	Net Change
Number of senior teams & players	3 non-academy/senior teams: 1) Senior mens 2) Women's 3) Deaf/Disability	5 teams (including the existing). New teams: 1) Wheelchair football 2) Walking football	New teams: 1) Wheelchair football 2) Walking football +30-40 new players for the above teams
Youth Players	1,300 participants in the Welling Academy and Scholarship programme A total of 26 teams.	No further players anticipated at this stage, although potential for growth to: 1) over 100 youth teams across all ages and genders in the future; and 2) over 300 students in the Academy	No further players anticipated at this stage, although potential for growth to: 1) over 100 youth teams across all ages and genders in the future; and 2) over 300 students in the Academy
Schools & Children	2 current schools being delivered sports and related activities: 1) Days Lane 2) St Fidelis Circa 40 school players.	New schools being targeted for programmes promoting healthy eating and lifestyle choices: 1) Crook Log Primary School 2) Bright Horizons Day Centre 3) Foster's Primary School 4) Barrington Primary School Opportunity for a number of local schools to play games on-site. Significant increase in number of school players, to circa 160 players. Opportunities for summer camps during the summer, outside of football season.	12+ new schools capable of being delivered sports and related activities: 4 new schools being targeted for programmes promoting healthy eating and lifestyle choices: 1) Crook Log Primary School 2) Bright Horizons Day Centre 3) Foster's Primary School 4) Barrington Primary School School players increase by circa 120 players. Opportunities for summer camps during the summer, outside of football season.

Table 4.5 – Summary of Changes to the Use of the Stadium

4.41 Figure 4.4 below summarises how the above use will be spread out across a typical week during the football season.

Times	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday		
09:00 - 10:00								12hrs	Academy - 16-18 Education
10:00 - 11:00								7 hrs	Welling United - Mens Teams
11:00 - 12:00								7 hrs	Welling United - Womens Team
12:00 - 13:00								10 hrs	Welling United - Youth Teams
13:00 - 14:00								22 hours	Community Use - Public / Schools
14:00 - 15:00									
15:00 - 16:00								58 hours	
16:00 - 17:00									
17:00 - 18:00									
18:00 - 19:00									
19:00 - 20:00									
20:00 - 21:00									

Figure 4.4 – Timings of Activities at the Stadium

- 4.42 Figure 4.4 serves to show the majority of the daytime Monday-Friday is utilised by various schools or the general public, alongside the Welling Academy. The use of the site during the week for academy players is not anticipated to change, however there will be an increased use of the stadium by the wider community including local schools. This would be managed to minimise additional traffic flow and control how any by what means academy players and in particular schools travel to the site. This will be incorporated into the accompanying Travel Plan.
- 4.43 On weekends there may be an increase in community use on a Saturday morning. The use of the site by the senior teams and players is not anticipated to change, with the exception of the two new teams which would operate during the week.

5.0 Trip Generation

Residential Scheme

5.1 Likely vehicle movements associated with the proposed flats has been calculated with reference to the TRICS Database, using the following parameters for the 'flats privately owned' category:

- ▶ Regions – Greater London;
- ▶ Date range – 01/01/15 to 20/10/22;
- ▶ Number of Units – 6-493;
- ▶ Selected Days – Weekdays;
- ▶ Selected Locations – Suburban Area and Edge of Town; and
- ▶ Maximum parking provision of one space per unit.

5.2 A summary of the peak hour total person and vehicular trip rates for 104 flats is provided in Table 4.1 below. The TRICS output is attached as **Appendix G**.

Mode of Travel	Weekday AM Peak		Weekday PM Peak		Weekday Daily Movements	
	Arr	Dep	Arr	Dep	Arr	Dep
Total Person Trip Rates	0.065	0.358	0.263	0.123	1.959	2.010
Total Person Trips	7	37	27	13	204	209
Vehicular Trip Rates	0.027	0.069	0.077	0.032	0.488	0.479
Vehicular Trips	3	7	8	3	51	50

Table 4.1: Trip Rates and Proposed Trips (104 Flats)

5.3 Table 4.1 indicates that the flats could generate 44 morning and 40 evening peak hour total person trips of which 10 would be vehicular in the morning peak and 11 vehicular in the evening peak. Across a total weekday daily movements there could be 413 total person trips, of which, 101 could be vehicular.

5.4 The above is not considered a substantial increase in vehicular trips, and indeed represents a robust scenario as it includes sites with dedicated car parking on site. With robust mitigation measures proposed in this TA, it is considered likely that the above level of traffic flow will materially reduce over time. This will be particularly relevant with the introduction of two car club vehicles as part of the proposals.

Increase in Demand Associated with Football Stadium Redevelopment

5.5 The stadium redevelopment is proposed to improve existing facilities for the club and enable youth teams to operate from the same location, as opposed to being spread out in the local area. The stadium will enable approximately 4,000 spectators to attend a game, although it is not anticipated that this level of attendance would be reached in the short or medium term. However it future proofs the scheme.

5.6 Section 7 of this report reviews the arrival and departure pattern of existing spectators, including by mode of travel. A robust Event Management Plan is then set out in Section 8 (and attached as a separate document) to manage increases in spectator numbers. This includes incentives to encourage travel by non-car modes, as well as off-road car parking locations which could be used on match days when spectator numbers exceed current levels.

Commercial Units

- 5.7 The proposals include a total of 204sqm of commercial floorspace not associated with the football club. This will comprise of two units fronting onto Park View Road. Both units will utilise the proposed loading bay on Park View Road for servicing needs, with no dedicated car parking provision for either unit.
- 5.8 As both schemes are small in scale and will operate with no dedicated car parking provision, it is not anticipated that either unit will generate a material level of activity. The majority of trips to both units will be on-foot or via public transport.
- 5.9 Considering the size of the units proposed, it is likely that they would operate as food/drink units, namely a café or restaurant. Neither of these uses is likely to generate material number of trips during the network peak periods, and have therefore not been assessed in further detail within this TA.

6.0 Residential Parking Impact

Residential Demand

6.1 A review of 2021 census data relating to car ownership has been undertaken for output areas surrounding the site, as shown in Figure 6.1 below.

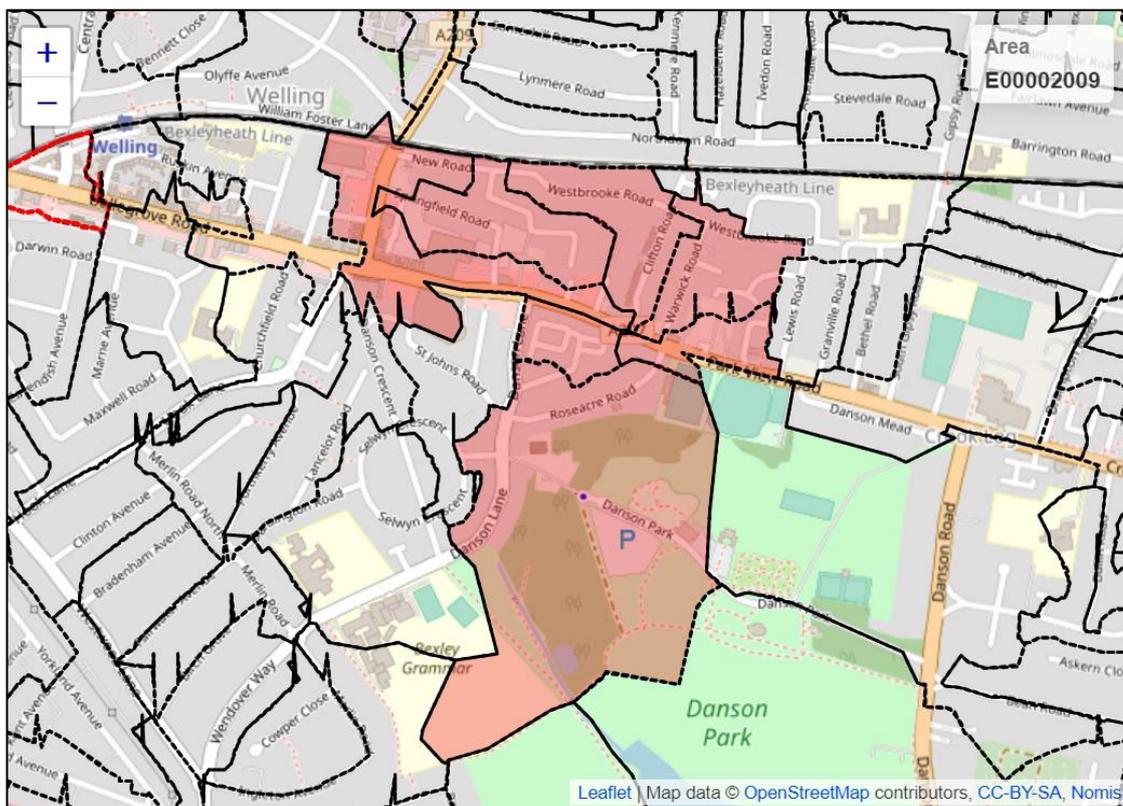

Figure 6.1 – Census Data Output Areas

6.2 A summary of car ownership is shown in Table 6.1 below.

Number of Cars	Car Ownership	
	Percentage	Applied to Scheme
No Car	44.2%	46
One Car	46.8%	49
Two Cars +	9.0%	9
-	100%	104

Table 6.1: Car Ownership Census Data

6.3 Table 6.1 indicates that some 46 flats out of the 104 proposed would not own a car. A further 49 flats would own one car, with 9 flats owning two cars. This relates to a total car ownership of **67 cars for 104 flats** (0.64 cars per flat). With six parking spaces provided on site, this could mean up to **61 vehicles** parking on-street.

Enterprise Car Club Proposal

- 6.4 Discussions have been held with Enterprise Car Club, who have recommended the implementation of two car club vehicles to be funded for a two-year period. A proposal prepared by Enterprise Car Club is attached as **Appendix H**. It is envisaged that this could include the provision of one or both cars on-street to maximise up-take by residents in the surrounding area. Based on previous discussions with LBB, it is envisaged that at least one car could be provided on Denham Close, located directly opposite the site. The drawing attached as **Appendix E** illustrates a potential car club bay in Denham Close. The second space may be best located on an alternative road to maximise usage. As only one car would be provided from the outset, it is considered premature to establish a second bay at this point in time until the success of the first bay is established.
- 6.5 There are no existing vehicles in the vicinity of the site, and therefore the inclusion of two further car club spaces could have a material impact on not just proposed residents, but also existing residents in the vicinity of the site. The nearest Enterprise Car is located in Bexleyheath, as highlighted in Figure 6.2 below.

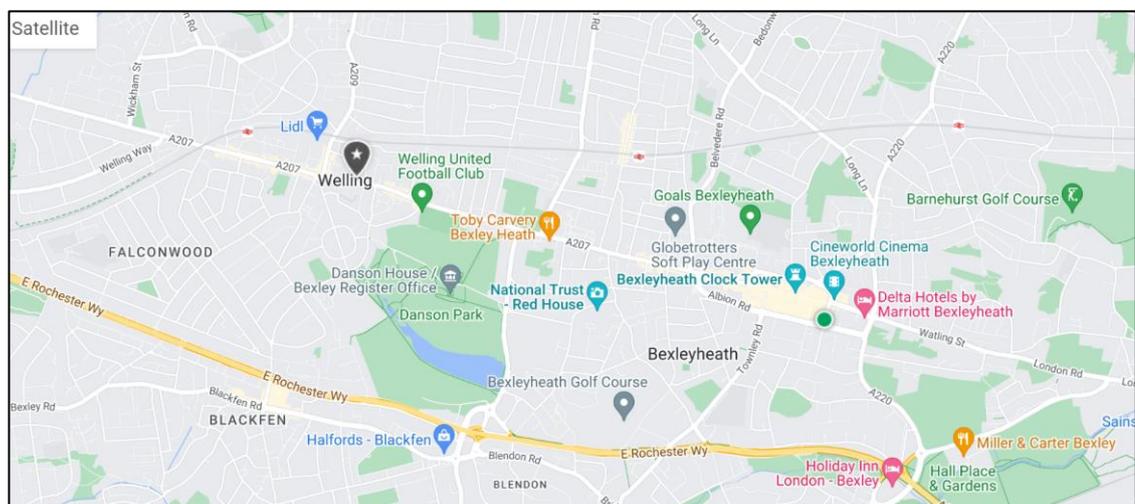

Figure 6.2 – Existing Enterprise Car Club Vehicle

- 6.6 The proposal from Enterprise includes a pot of funding to offer existing residents in the surrounding area discounted membership to the new car club vehicles to try and encourage the up-take of the car club and reduce existing car demand. It is envisaged that a suitable level of funding would be agreed with LBB.

Co-Mobility Research on Car Club Vehicles

- 6.7 A 2022 report by CoMo – the shared transport organisation (www.como.org.uk), indicates each car club vehicle in the UK replaced 22 private cars, which relates to ownership. Car clubs also free up much-needed space by replacing private cars with a much smaller number of more efficiently used vehicles.
- 6.8 71% of respondents said that a reason for joining a car club was because they don't often need a car. This will assist in reducing future residents needs to own a car.
- 6.9 It is possible through the implementation of two car club vehicles that a total of **44 vehicles** that would otherwise require car parking provision could be removed from the equation.

Reduction in Car Ownership Through Mitigation

- 6.10 Based the above, two car club vehicles could potentially reduce on-street parking impact down to **17 spaces** from the 61 spaces assumed via census data. For robustness it is assumed that the reduction would only be 22 vehicles, as only one car club would be in operation from the outset. This would mean an overall reduction in parking demand to **39 spaces**.
- 6.11 This does not include wider reductions in parking demand through existing residents in the surrounding area signing up to Enterprise, which will be possible thanks to the significant funds being put forward by Woolwich Road Limited for residents in the wider area.
- 6.12 The above is based on factual data acquired by CoMo, and serves to show the impact robust mitigation can have on car ownership and resultant parking impact.
- 6.13 With the proposals providing six car parking spaces on site, it is possible that the scheme with robust mitigation in place could lead to an overall increase of only 17 cars on-street. Robustly this would be 39 cars with only one car-club vehicle in place.

Parking Beat Surveys

- 6.14 The existing on-street parking levels, or 'stress', surrounding the garages sites has been assessed through the undertaking of manual surveys, in accordance with the 'Lambeth Council Parking Survey Guidance Note' (Lambeth Council, 2009).
- 6.15 Lambeth Council's parking survey methodology is broadly accepted by the majority of councils and is tailored to the type of assessment required. The scope of surveys was agreed with LBB highways in advance, and including the following time periods:
- ▶ Two overnight spot checks between the hours of 00:30 and 05:30 to capture peak residential demand;
 - ▶ One Spot check on a weekday evening between the hours of 20:00-21:00 to coincide with the evening football match; and
 - ▶ Spot checks between the hours of 11:00-12:00 and 15:00-16:00 on the Saturday to capture both before and during the Saturday match.
- 6.16 This is intended to capture the maximum parking demand within both a 200 a 500-metre radius of the identified site. The local parking capacity is deemed 'stressed' when on-street parking exceeds 85% capacity. The surveyed roads for each site according to this methodology are shown in **Appendix I**. It is noteworthy that a distance of 500 metres was agreed as appropriate with LBB highways, although a review how this would displace traffic is summarised in this note. A 200 metre radius was also undertaken, and has been reviewed separately.
- 6.17 The number of existing parking spaces in the survey area were identified from on-street observations and site measurement as part of the analysis. For the purposes of calculating parking stress as defined by the Lambeth guidance document, it is assumed that each vehicle takes up an average kerb space of 5.5 metres. Therefore, where parking bays are not physically marked out, lengths of kerb space were measured and split into increments of 5.5 metres. Physical bays have been divided into 5.5 metre intervals and rounded to the nearest whole number to calculate the capacity of each space. Any locations with a length of kerb shorter than 5 metres or along vehicle crossovers, have been eliminated from the available kerb space, in accordance with the guidance.
- 6.18 Lambeth guidance typically assumes a parking space measures 5 metres in length, although LBB has requested a length of 5.5 metres for robustness.

6.19 The overnight surveys on Monday and Tuesday (midnight to 5am) represent the residential parking stress, while the daytime/evening surveys on Tuesday and Saturday represent the parking stress from the football stadium. At the request of LBB, the results are contained in Table 6.2 below.

Date	Capacity	Total number of on-street cars	% stressed	Spare spaces
Monday 20/03/23 (00:30-05:50)	892	634	71.1%	258
Tuesday 21/03/23 (00:30-05:30)	892	611	68.5%	282
Tuesday 21/03/23 (20:00-21:00)	892	744	83.4%	148
Saturday 25/03/23 (11:00- 12:00)	892	605	67.8%	287
Saturday 25/03/23 (15:00- 16:00)	892	686	76.9%	206

Table 6.2 – Parking Beat Survey Results

6.20 Table 6.2 indicates that on-street parking stress is below the 85% threshold that classifies a road network as being under parking 'stress'. The busiest time period recorded was a Tuesday evening when the football match was taking place.

Overnight Parking Impact

6.21 Table 6.3 illustrates the resultant effect on overnight parking stress assuming an additional 61 cars are parked on-street.

Date	Total number of on-street cars, after development	Spare spaces after development	% stressed after development
Monday 20/03/23 (00:30-05:50)	695	197	77.9%
Tuesday 21/03/23 (00:30-05:30)	672	220	75.3%

Table 6.3 – Parking Beat Survey Including Development Impact

6.22 Table 6.3 indicates on-street parking stress will remain below the 85% threshold with an additional 61 cars added to the road network. This suggests that there is capacity on-street to accommodate parking demand associated with the residential element of the proposal within a 500 metre radius of the site.

6.23 Table 6.4 below summarises the impact of the development assuming the robust mitigation is successful in enacting change in car ownership for new residents. If successful, demand could reduce to 39 cars parked on-street.

Date	Total number of on-street cars, after development	Spare spaces after development	% stressed after development
Monday 20/03/23 (00:30-05:50)	673	219	75.5%
Tuesday 21/03/23 (00:30-05:30)	650	242	72.9%

Table 6.4 – Parking Beat Survey Including Development Impact

6.24 The above highlights the further impact mitigation can have in limiting parking impact.

Impact Associated with 200 Metre Study Area Overnight

6.25 Table 6.5 below summarises the availability of on-street parking within a 200 metre radius of the site, as requested by LBB highways.

Date	Capacity	Total number of on-street cars	% stressed	Spare spaces
Monday 20/03/23 (00:30-05:50)	121	97	80.2%	24
Tuesday 21/03/23 (00:30-05:30)	121	93	76.9%	28

Table 6.5 – Parking Beat Survey Results

6.26 Table 6.5 indicates that on-street parking stress is below the 85th percentile threshold, however the smaller study area significantly reduces the number of available parking spaces. Overnight availability is shown to be between 24 and 28 spaces, which when incorporating the development proposals would likely result in demand exceeding capacity.

6.27 However, by examining the parking stress map included at **Appendix I**, it is evident that there are a number of roads within 200-300 metres of the site with generous spare capacity overnight. This includes:

- ▶ Danson Lane;
- ▶ Nags Head Lane;
- ▶ Park View Road;
- ▶ Roseacre Road;
- ▶ Springfield Road; and
- ▶ Westbrooke Road

6.28 On the basis of the above, it could well be that some existing parking demand is relocated further from the site. However the spare capacity around 200-300 metres from the site would mean that any displaced existing parking is unlikely to be displaced beyond the 200 metre distance generally accepted to be around the limit of what people are prepared to walk from their homes.

6.29 It is therefore considered that there is sufficient spare capacity to accommodate residential parking demand on-street overnight. With further mitigation measures described above, this demand is likely to reduce further.

Combined Impact of Residential

6.30 On-street car parking demand has also been assessed during two football matches, a Tuesday evening and a Saturday afternoon, which is replicated below for reference.

Date	Capacity	Total number of on-street cars	% stressed	Spare spaces
Tuesday 21/03/23 (20:00-21:00)	892	744	83.4%	148
Saturday 25/03/23 (15:00- 16:00)	892	686	76.9%	206

Table 6.6 – Parking Beat Survey Results

- 6.31 The survey results show the Tuesday evening as attracting the highest parking demand for the survey period. Neither match coincides with peak residential parking demand, although it can be assumed that the majority of residents would be parked on-street at 21:00 hours.
- 6.32 The Tuesday evening survey recorded a total of **133** additional vehicles than that recorded overnight. The Saturday survey during the match recorded a total of **81** additional vehicles than compared to the midday survey. This impact is given further consideration later in this report.
- 6.33 An additional 61 cars associated with the flats will result in parking demand increasing on match days to that shown in Table 6.7 below.

Date	Capacity	Total number of on-street cars	% stressed	Spare spaces
Tuesday 21/03/23 (20:00-21:00)	892	805	90.2%	87
Saturday 25/03/23 (15:00- 16:00)	892	747	83.8%	145

Table 6.7 – Parking Beat Survey Results with Residential Demand

- 6.34 The survey results suggest that parking demand on a Tuesday evening will exceed capacity (90.2%) when a football match is taking place, alongside the additional demand generated by the flats. As such, it is evident that parking demand by spectators needs to be managed more robustly, with the inclusion of a Management Plan during match days. This is considered later in this report. However, demand on a Saturday remains below theoretical capacity at 83.8%.
- 6.35 The above assumes on-street demand from the flats without any reduction to account for the robust mitigation being put in place. With mitigation it is likely that only 17-39 cars associated with the flats will be parked on-street (depending upon whether one or two car club vehicles are provided from the outset). Assuming these reductions, the resultant parking demand on match days is as shown in Table 6.8 below.

Date	Capacity	Total number of on-street cars	% stressed	Spare spaces
Tuesday 21/03/23 (20:00-21:00)	892	783	87.8%	109
Saturday 25/03/23 (15:00- 16:00)	892	725	81.3%	187

Table 6.8 – Parking Beat Survey Results with Residential Demand

- 6.36 The survey results suggest that parking demand on a Tuesday evening will exceed 85% capacity, albeit marginally. Demand on a Saturday, reaches 81.3%, suggesting that there would still be capacity on-street within a 500 metre radius inclusive of development parking demand (with mitigation) on a match day.

Conclusion

- 6.37 The above assessment highlights how parking demand associated with the residential proposals can be accommodated on-street with robust mitigation in place. Indeed, even without mitigation there is sufficient capacity overnight to accommodate the proposals.
- 6.38 Demand increases on match days, suggesting that a combination of the residential development and a football match taking place will result in demand marginally exceeding 85% on a weekday evening (with robust mitigation in place).
- 6.39 The above suggests that appropriate event management is needed to manage parking demand associated with the stadium, which should seek to reduce current on-street parking demand for spectators especially during a weekday evening match. Whilst less relevant to current Saturday matches, the management of events is still required should spectator numbers materially increase in the future.

7.0 Impact of Stadium Redevelopment

7.1 The following paragraphs summarise a set of surveys undertaken at Welling FC to understand current travel habits. This is then assessed against parking demand on-street to instigate when Event Management is required.

Interview Surveys

7.2 Interview surveys were conducted of travel habits for spectators when both arriving and departing two matches, which took place on the following dates:

- ▶ Tuesday 21/03/2023 (evening game); and
- ▶ Saturday 25/03/2023 (daytime game).

7.3 A summary of the survey results is provided below in Table 7.1.

Mode of Travel	Evening Arrival		Evening Departure		Daytime Arrival		Daytime Departure	
	Count	%	Count	%	Count	%	Count	%
Train	25	14%	7	6%	8	5%	19	12%
Bus	49	27%	25	23%	47	28%	36	23%
Car (driver)	35	19%	18	16%	25	15%	15	14%
Car (Passenger)	14	8%	2	2%	10	6%	14	9%
Walk	48	26%	44	40%	63	38%	53	34%
Cycle	1	1%	4	4%	3	2%	0	0%
Taxi	12	7%	10	9%	12	7%	11	7%
Total	184	100%	110	100%	168	100%	154	100%
Alternative Mode								
Train	20	11%	13	13%	14	8%	10	7%
Bus	78	44%	29	29%	69	40%	71	46%
Car (driver)	16	9%	13	13%	21	12%	20	13%
Car (Passenger)	8	5%	6	6%	2	1%	3	2%
Walk	22	12%	23	23%	56	32%	35	23%
Cycle	3	2%	3	3%	2	1%	1	1%
Taxi	30	17%	12	12%	10	6%	13	8%
Total	177	100%	99	100%	174	100%	153	100%

Table 7.1 – Interview Survey Results

- 7.4 The most common mode of transport to the evening game was the bus, equating to 27% of arriving spectators and 23% of departing spectators. However, some 40% of spectators travelled on foot as their main mode of travel when departing the stadium. Trips by bus and on-foot were the main modes of travel, with car driver trips below 20%.
- 7.5 The most common mode of transport to the Saturday daytime game was trips on foot, equating to 38% of arriving spectators and 34% of departing spectators. Bus trips were also high at 28% and 23% respectively. Car driver trips were low at 14-15%.
- 7.6 It is likely that many of the car driver trips recorded related to away fans, with the away teams being Taunton Town and Bath City.
- 7.7 When spectators were asked about their choice for alternative transport, an even higher percentage of evening spectator respondents chose the bus. The majority of daytime spectators reported walking as an alternative mode of transport. This suggests that measures such as widening the footway would improve the walking environment and bus waiting space, encouraging spectators to choose this mode of transport over a private vehicle.
- 7.8 The interview survey results reveal a low proportion of spectators that chose private cars as a mode of transport to the stadium, and a high proportion of spectators that chose to walk or take public transport. This will reflect the nature of the club attracting visitors from a relatively close proximity.
- 7.9 Total spectator numbers to the evening game were 485, with the Saturday match attracting 707 spectators. Table 7.2 below uplifts the recorded data to reflect total spectators.

Mode of Travel	Evening Arrival		Evening Departure		Daytime Arrival		Daytime Departure	
	Count	%	Count	%	Count	%	Count	%
Train	66	14%	31	6%	34	5%	87	12%
Bus	129	27%	110	23%	198	28%	165	23%
Car (driver)	92	19%	79	16%	105	15%	96	14%
Car (Passenger)	37	8%	9	2%	42	6%	64	9%
Walk	127	26%	194	40%	265	38%	243	34%
Cycle	3	1%	18	4%	13	2%	0	0%
Taxi	32	7%	44	9%	51	7%	51	7%
Total	485	100%	485	100%	707	100%	707	100%

Table 7.2 – Uplifted Interview Survey Results

- 7.10 The above suggests that between 79-92 spectators drove to an evening game, whilst circa 96-105 drove to the Saturday game. This is given due consideration in respect of car parking impact within the following section of this report.
- 7.11 The survey also highlights how parking demand on a Saturday match takes place as increasing by **81** vehicles compared to the pre-match survey. This correlates well with Table 7.1, which suggests in the order of 96-105 drove to the match. Taking into account some spectators parking outside of the study area or in pay and display cars parks not included in the survey, this offers a reliable baseline for projecting forward.

- 7.12 The survey also recorded measures which might encourage spectators to travel by alternative modes of travel. The responses included a large number of people who suggested additional cycle parking facilities and improved public transport options would aid in reducing their need to drive.
- 7.13 It is considered that the location of frequent bus stops adjacent to the stadium is sufficient to enable access by bus, however it may be that further education of spectators as to routes and destinations available may assist. This could include timetable and maps on display in convenient locations, newsletters to visitors, and the potential for personalised travel planning for spectators seeking advice.
- 7.14 A copy of the survey data is attached as **Appendix J**.

Parking Impact Associated with Increased Spectator Attendance

- 7.15 The assessment set out in Section 6 of this TA summarises the impact associated with 104 additional flats. This also includes the impact of the flats whilst weekday and Saturday matches are taking place at Welling FC.
- 7.16 With robust mitigation in place, the assessment highlights that parking demand will reach 87.8% on a weekday evening, and 81.3% on a Saturday during the day.
- 7.17 The key percentage in respect of parking impact is 85%, as it is at this point that parking impact is assumed to result in drivers struggling to find a space to park on-street. Consideration has been given to the point at which demand during both matches reaches 85%. This would be at the point whereby parking demand reaches 758 vehicles (out of 892 spaces).
- 7.18 With demand reaching 783 cars on a weekday inclusive of the residential development proposals, it is clear that management of matches is required on a weekday from the outset of development. Demand reaches 725 cars on a Saturday, suggesting there is scope for a further **33 cars** on a Saturday before demand reaches 85%.
- 7.19 Spectator numbers for each surveyed game were as follows:
 - ▶ Tuesday evening = 485; and
 - ▶ Saturday afternoon = 707.
- 7.20 The surveys recorded 19% of arrivals as car driver on the weekday evening, dropping to 15% on a Saturday. The above is summarised in Table 7.3 below, which suggested a spectator capacity at which point additional intervention is needed to manage car parking impact on-street.

Date	Demand with Residential Scheme	Spare Parking Capacity	Revised Spectator Capacity	Spectator Capacity Tipping Point
Tuesday Evening	87.8%	-25	-132	353 (485 - 132)
Saturday Daytime	81.3%	33	220	927 (707 + 220)

Table 7.3 – Tipping Point at Which Point Event Management is Needed

- 7.21 Maximum spectator capacity without intervention would need to be as follows:
 - ▶ Weekday evening = 353; and
 - ▶ Saturday afternoon = 927.
- 7.22 The above is given more consideration in Section 8, where an Event Management Plan is summarised.

Total Capacity Events

- 7.23 In the unlikely scenario that the stadium was to attract 4,044 spectators, the Event Management Plan would need to robustly demonstrate that any parking impacts can be adequately addressed. This would require ensuring a suitable number of off-street car parks are available to accommodate demand.
- 7.24 Table 7.3 above sets out the point at which off-street parking provision is required to cater for spectators driving to a match. Based on this data, alongside the percentage split for car drivers, an estimation can be made as to how many cars would need to be accommodated off-street in suitable car parks.

Date	Spectator Capacity Tipping Point	Percentage of Car Drivers	Additional Cars Assuming 4,000 Attendance
Tuesday Evening	353	19%	701 (4,044-353 *0.19)
Saturday Daytime	927	15%	468 (4,044-927 *0.15)

Table 7.4 – Tipping Point at Which Point Event Management is Needed

- 7.25 Maximum spectator capacity (4,044) would result in a need to accommodate 701 cars within off-street parking spaces on a weekday evening, and 468 cars on a Saturday. Section 4 of this TA illustrates parking locations with over 700 spaces. Whilst it is not envisaged an event of this scale will take place in the short or medium term, the Event Management Plan will ensure that sufficient spaces are made available should this scale of event occur in the future. This is not however necessary for a typical weekend when additional parking demand is likely to be low.

Use of the Stadium on a Typical Day

- 7.26 As set out in Section 4, the use of the stadium on a typical day is not anticipated to materially change, other than attracting additional use from the wider community and schools. There will also be two new senior teams, namely the Wheelchair football and Walking football teams. This is not anticipated to materially increase trips to and from the site, especially as these teams will not overlap with the three existing senior teams.
- 7.27 The majority of the daytime Monday-Friday is utilised by various schools or the general public, alongside the Welling Academy. The use of the site during the week for academy players is not anticipated to change, however there will be an increased use of the stadium by the wider community including local schools. This would be managed to minimise additional traffic flow and control how any by what means academy players and in particular schools travel to the site. This will be incorporated into the accompanying Travel Plan. On weekends there may be an increase in community use on a Saturday morning, however this will end sufficiently in advance of the senior men’s team playing so as not to overlap with spectators.

8.0 Mitigation Measures

Event Management Plan

- 8.1 A draft Event Management Plan (EMP) has been prepared ahead of planning submission to outline the management strategy for the operation of the ground. The EMP will be updated as necessary with information as the stadium reopens and the management strategy evolves.
- 8.2 The EMP is designed to outline the management, protocol and process for events and match day operations at the ground. It is noted that events are likely to require independent consideration depending on their type or scale and the document is designed as a framework guide to outline the principles for this to occur.
- 8.3 The stadium improvements may generate additional traffic flow, although through the Travel Plan and Event Management Plan it is envisaged that a reduction in the percentage of car driver trips can be realised. The proposals are not expected to result in a material increase in spectator numbers in the short to medium term, more to improve facilities for the academy as well as implement new hospitality areas (for hire) and classrooms for community use. As such, there will likely be a material increase in use of the stadium during the daytime, but not Welling FC matches.
- 8.4 In any event, measures will be put in place to address increases in spectator numbers, both for home and away fans.
- 8.5 The Event Management Plan puts forward various measures which includes:
- ▶ A Matchday Co-ordinator (MCO) will be appointed to take responsibility for all aspects of transport;
 - ▶ The provision of off-street parking in private car parks to be secured by a legal agreement;
 - ▶ Incentives to encourage both home and away fans to park off-street in the above locations rather than add to on-street demand; and
 - ▶ Temporary signage and safe crossing routes to aid non-car travel.
- 8.6 It is envisaged that the Event Management Plan will work alongside the Travel Plan in managing travel associated with the football club.

Framework Travel Plans

- 8.7 Travel Plans will be developed for the site to encourage sustainable travel for both the residential use and the stadium. The Travel Plan incentives that are likely to be made available to the first residents of each dwelling are:
- ▶ Resident travel packs;
 - ▶ Cycle parking provision;
 - ▶ Vouchers for the purchase of public transport tickets up to a value of £50 per unit;
 - ▶ Cycle vouchers towards the purchase of a bicycle from a local supplier; and
 - ▶ Two years car club membership per unit to go alongside the two cars provided.
- 8.8 The Travel Plan will also seek to encourage non-car travel for spectators, which may include communication of travel information to attendees, as well as stewards to aid in ensuring safe walking routes on match days.
- 8.9 The Travel Plan will be provided as a separate report as part of the planning submission.

Enterprise Car Club Provision

- 8.10 Discussions have been held with Enterprise Car Club, who have recommended the implementation of two car club vehicles to be funded for a two-year period. It is envisaged that this could include the provision of one or both cars on-street to maximise up-take by residents in the surrounding area.
- 8.11 The proposal from Enterprise includes a pot of funding to offer existing residents in the surrounding area discounted membership to the new car club vehicles to try and encourage the up-take of the car club and reduce existing car demand. It is envisaged that a suitable level of funding would be agreed with LBB.

Active Travel Zone (ATZ) Assessment

- 8.12 An ATZ has been undertaken in accordance with TfL's Healthy Streets Approach. The report and recommendations are contained within a separate report, suggesting overall that the surrounding road and cycle network accords with guidance. However some minor recommendations are proposed to improve on the existing situation.

Draft Delivery and Servicing Management Plan

- 8.13 A Draft Delivery and Servicing Management Plan will be prepared, and will outline the proposed delivery and servicing strategy for the operational site. The key aspects to include in the DSMP are as follows:
- ▶ Review of access and servicing arrangements;
 - ▶ Refuse and recycling management strategy;
 - ▶ Servicing management strategy;
 - ▶ Swept path analysis; and
 - ▶ Monitoring.

Draft Construction Logistics Plan

- 8.14 To support the application and provide the highway authorities with some comfort of the proposed construction aspect of the scheme a draft Construction and Logistics Plan will be prepared as part of the planning submission. The key aspects to include in the CLP are as follows:
- ▶ Construction management details;
 - ▶ Identification of proposed construction routes;
 - ▶ Construction vehicle and deliveries management measures;
 - ▶ Illustrative construction site details including site offices, staff welfare and storage areas;
 - ▶ Measure for interfacing with members of the Public; and
 - ▶ Outline of Environmental Mitigation measures.

9.0 Response to Pre-Application Comments

- 9.1 The following paragraphs summarise a response to comments raised by LBB highways as part of a previous pre-application submission. Each relevant comment is summarised and provided with an appropriate response.

"Paragraph 1.1 of the report indicates that the proposals include 114 residential units although the figure of 117 units is referred to elsewhere in the report."

- 9.2 The Transport Assessment correctly references 104 units, which the latest scheme seeks to provide..

"The travel mode shares derived from the spectator interview surveys have been used to predict the travel demands that could be generated by future significantly increased spectator attendances. These are based on a relatively small sample of 184 spectators that attended an evening game on Tuesday 21/03/2023 and a Saturday game on 25/03/2023. At those matches the actual attendances were 485 and 707 respectively."

- 9.3 The surveyors sought to maximise the number of respondents by surveying groups as well as individuals. However ultimately many visitors were unwilling to answer questions about travel habits. The level of response is considered to represent a suitable comparison for the purposes of this exercise. Further survey work would be undertaken as part of Travel Plan Monitoring, alongside the Event Management Plan where necessary.

"It is possible that many of the car driver trips recorded related to away fans, with the away teams being Taunton Town and Bath City. However, this aspect was not recorded in the questionnaire."

When spectators were asked about their choice for alternative transport, an even higher percentage of evening spectator respondents chose the bus.

There is a concern that the modal shares recorded for sustainable travel are unlikely to be replicated for a much larger ground capacity as most spectators will be travelling longer distances. This will result in a significant increase in car driver trips.

- 9.4 The Travel Plan and Event Management Plan will seek to manage additional car travel. This will be enforced through securing off-street car parking in the vicinity of the site which visitors will be encouraged to use by offering incentives such as discounted food/drink, or vouchers towards purchasing merchandise.
- 9.5 In addition, away fans and clubs will be reminded of public transport options to access the site, with the potential for discounts for those away fans using public transport.

"The above assertion is confirmed by paragraph 2.7 which states: -

"The interview survey results reveal a low proportion of spectators that chose private cars as a mode of transport to the stadium, and a high proportion of spectators that chose to walk or take public transport. This will reflect the nature of the club attracting visitors from a relatively close proximity."

Cray Wanderers FC were granted planning permission for a stadium with a 1,300-spectator capacity at Flamingo Park, Bromley, London to the south of the A20, Sidcup Road/Sidcup Bypass (Bromley planning reference 15/03053/FULL1). The Transport Assessment that supports that application adopted a car driver mode share of 50% and car passenger of 7%, which was based on a survey of supporters. This adds to the concerns regarding the current underestimation of vehicle trips and parking demand likely to be generated by these proposals."

- 9.6 It is not considered appropriate to compare travel modes between two sites when there are material differences between them. The survey of Cray Wanderers FC for example included a dedicated on-site car park for all users. The stadium is also not located in a dense residential area as is the case with Welling FC. Both of the above will fundamentally impact on the number of spectators driving to the site. A survey of existing Welling FC matches is substantially more robust, and highlights a very different profile to Cray Wanderers FC.

"The report highlights the spectator responses to alternative modes of travel which included many people who suggested additional cycle parking facilities and improved public transport options would aid in reducing their need to drive. The report suggests that this could be achieved through travel plan measures such as educating spectators as to routes and destinations that currently exist and the provision of timetable and maps on display in convenient locations, newsletters to visitors, and the potential for personalised travel planning for spectators seeking advice. Although these measures would be useful it is considered significant improvements and investment would also be required to local public transport services to increase capacity."

- 9.7 Bus services fronting the site operate at frequent intervals, although through discussion with TfL it may be that additional contributions are secured towards improving bus services. This could be secured by way of a Section 106 contribution. Significant further measures are proposed to reduce car use, as set out in this TA.
- 9.8 Improvements are proposed by widening the footway fronting the site to increase the ability to accommodate additional pedestrians. The Event Management Plan will include on-going dialogue with TfL to ensure that public transport is sufficient to manage eventual increases in spectator numbers.

"The on-street parking surveys have not been undertaken in accordance with the scope agreed and highway report TN01 and subsequent discussions. These are the following omissions: -

- ▶ *A plan, preferably at 1:1250, has not been provided indicating the location of the available parking spaces (the plan should include details of waiting restrictions and crossovers etc.). Appendix I includes a plan identifying all waiting restrictions/crossovers etc. for each survey period. It also identifies parked cars and where spaces exist.*
- ▶ *The number of cars parked on each road within the survey area on each night must be counted and recorded, and the location of each car should be noted approximately on the plan (marked with an 'X'); The maps included within Appendix I illustrate each car parked in the study area, whilst the supporting tables clearly identify each car parked on each section of road.*
- ▶ *Photographs should be taken, if possible, of the parking conditions in the survey area to back-up the results; This was not possible overnight due to poor lighting conditions.*
- ▶ *A 200m analysis of parking stress as well as the 500m for all survey periods including match days was requested and agreed (email exchange with Motion 15th February 2023). This is included within Appendix I, and a summary provided within the TA.*

In addition, the parking surveys and subsequent calculation of parking stress includes private roads such as John Newton Court which was specifically excluded from the Parking Beat Survey Study Area plan in TN01. Paragraph 3.15 states that a parking stress map has been included in Appendix B however, as indicated above this is not the case."

- 9.9 The parking stress map is included within **Appendix I** for each survey period, identifying restrictions and parked vehicles. John Newton Court has been excluded from the survey results, and the data amended in this Transport Assessment.

"An assessment of potential car ownership for the proposed residential units has been provided. This is based on 2011 Census data. A further assessment using the 2021 Census data which is now available should be included."

- 9.10 2021 Census data has been incorporated into the Transport Assessment.

"The projected on street parking stress following implementation of the scheme does not take account of committed development in the area, some of which is likely to lead to additional overnight on street parking demand."

- 9.11 A review of the Bexley planning portal does not highlight any major schemes in the immediate vicinity of the site which would add to on-street parking stress. Schemes that may add parking demand on-street fall outside of the study area, and therefore unlikely to impact on the development site.

"The assumption in paragraph 3.18 that only two thirds of the projected residential parking demand will occur on a match day evening requires further justification possibly including the use of TRICS data."

- 9.12 The assessment has been amended to account for total parking demand, albeit both with and without reductions in parking demand due to the robust mitigation package promoted.

"The pre-application presentation indicates that Welling United FC has on-site parking to accommodate limited cars, whilst additional on street parking is available adjacent to the cricket club. This does not appear to give consideration as to how the potential increase in visitor numbers, or on street parking restrictions that may be implemented for the proposed residential units, may affect parking for the neighbouring sports facility."

- 9.13 This TA sets out robust mitigation measures to address additional parking demand, whilst including an Event Management Plan to manage football related parking.

"The submitted documents include drawings indicating the locations of the car club and disabled parking bays in Roseacre Road. The two car club bays that are currently shown in Roseacre Road may be better located at the western end of the turning head in Denham Close on the northern side of Park View Road opposite the site. Track plots of a refuse vehicles using this turning head will determine if this is a suitable location."

- 9.14 As set out within this TA, two car club spaces can be accommodated on Denham Close without impacting on the movement of a refuse vehicle.

"The proposed alterations to the Park View Road in front of the site are unclear. Some of the drawings show minor changes to the location of the existing bus stop. Others London Borough of Bexley indicate the bus stop location will remain as existing, but the footway will be widened by reducing the carriageway width. The proposed highway amendments, also include alterations to the existing locations of the pedestrian refuge to allow for a dedicated loading bay to be provided in front of the site."

- 9.15 All drawings show the bus stop remaining in its current location. As described in this TA, the footway will be widened fronting the site to aid pedestrian movement on match days.

"It is noted that the area behind the bus stop is currently used by car transporters delivering to the dealership on the northern side of the road. The revised arrangements proposed may not be suitable for this existing business. If the proposed loading bay were to be used cars would need to be potentially unloaded in front of stationary buses. If car transporters were to unload behind the bus stop as they currently do buses using this stop and other large vehicles travelling west along park View Road will be forced into the opposing traffic lane into the path of oncoming traffic. This is evident from drawing 2208030-TK01 Rev C which can be viewed in section 7 of the GLA presentation document."

- 9.16 Currently this takes place east of the bus stop fronting the site. By retaining the bus stop in its current location, it is considered that the transporter can stop in its current location. There is sufficient space for all vehicles (including a bus) to pass around a transporter is stopped in the highway, and indeed this is an existing situation that the proposals would not alter.

"The design of these highway works therefore require further consideration. Any proposed highway alterations included within the application will need to be accompanied by a satisfactory Stage 1 Road

Safety Audit. The audit team will need to be approved by the Highway Authority in advance of the report being commissioned."

- 9.17 It is considered that the drawings attached to this TA adequately show how the road layout can be amended without any impact on passing vehicle movement. A Stage 1 Road Safety Audit will be commissioned in advance of any planning submission.

"There are concerns regarding the adequacy of the proposed emergency service vehicles access and parking arrangements Further information should be providing regarding arrangements for coach parking should visiting teams / supporters arrive by this means."

- 9.18 This TA sets out how visiting coaches will be managed via off-site car parks through an agreement with relevant bodies. This is likely to include either the nearby college or Danson Park. A written agreement in principle will be secured in advance of any forthcoming planning application.

- 9.19 Emergency access is via the eastern access, with space for an ambulance to park or enter the pitch. This is described in this TA.

Most Recent Discussions

- 9.20 A further pre-application meeting took place in October 2023, with a formal response provided in November 2023. Relevant comments raised by the highway authority and an appropriate response are summarised in Table 9.1 below.

Comment	Response
The accessibility of the disabled parking spaces for residents of the development	Residents utilising the accessible parking spaces will benefit from level access via the car park to the building entrance via Roseacre Road and Park View Road.
The need for an additional means of access to the basement cycle store in the event of lift failure	A rail will be provided within the staircase to offer an alternative means of moving a cycle to and from the basement, which will be motorised.
Further amendments to the parking stress survey are needed	John Newton Court was fully removed from the analysis as part of the previous issued report (September 2023). The additional roads referenced have also been removed. In addition, the assessment now accounts for parking demand assuming only one car club vehicle from the outset and not two. A second vehicle may follow at a later date.
Further information is needed regarding the transport impacts of private functions	This is set out within the latest version of the TA, as well as measures within the accompanying Travel Plan
Further clarification is needed regarding manoeuvring of double decker buses in relation to the widened pavement	Swept path analysis is provided of a single decker bus within this TA. A double decker bus is identical in length and manoeuvrability to a single decker bus, and does not therefore require further swept path.
The implications for cyclists in relation to the widened footway and the need to consider alternative options	It is not envisaged that cyclists will be materially impacted upon through the alterations to the road layout. There is an existing on-carriageway cycle lane which will be retained. Providing a shared surface fronting the site is not considered viable when considering the high number of pedestrians on match days. Reducing the width of the carriageway fronting the site will aid in reducing vehicle speeds, to the benefit of cyclists.
Objection to the provision of doors opening outwards onto the footway	The architect's site layout plan no longer shows doors opening into the public highway.
Questions as to the suitability of the proposed refuse management arrangements	A Delivery and Servicing Plan is provided with the application to manage the storage and collection of waste on-site. Some waste containers will be relocated on collection days to a suitable location to be collected from the proposed loading bay.

Table 9.1 – Pre-Application Comments (October 2023)

9.21 The above comments are considered to suitably addressed within this TA.

10.0 Summary and Conclusions

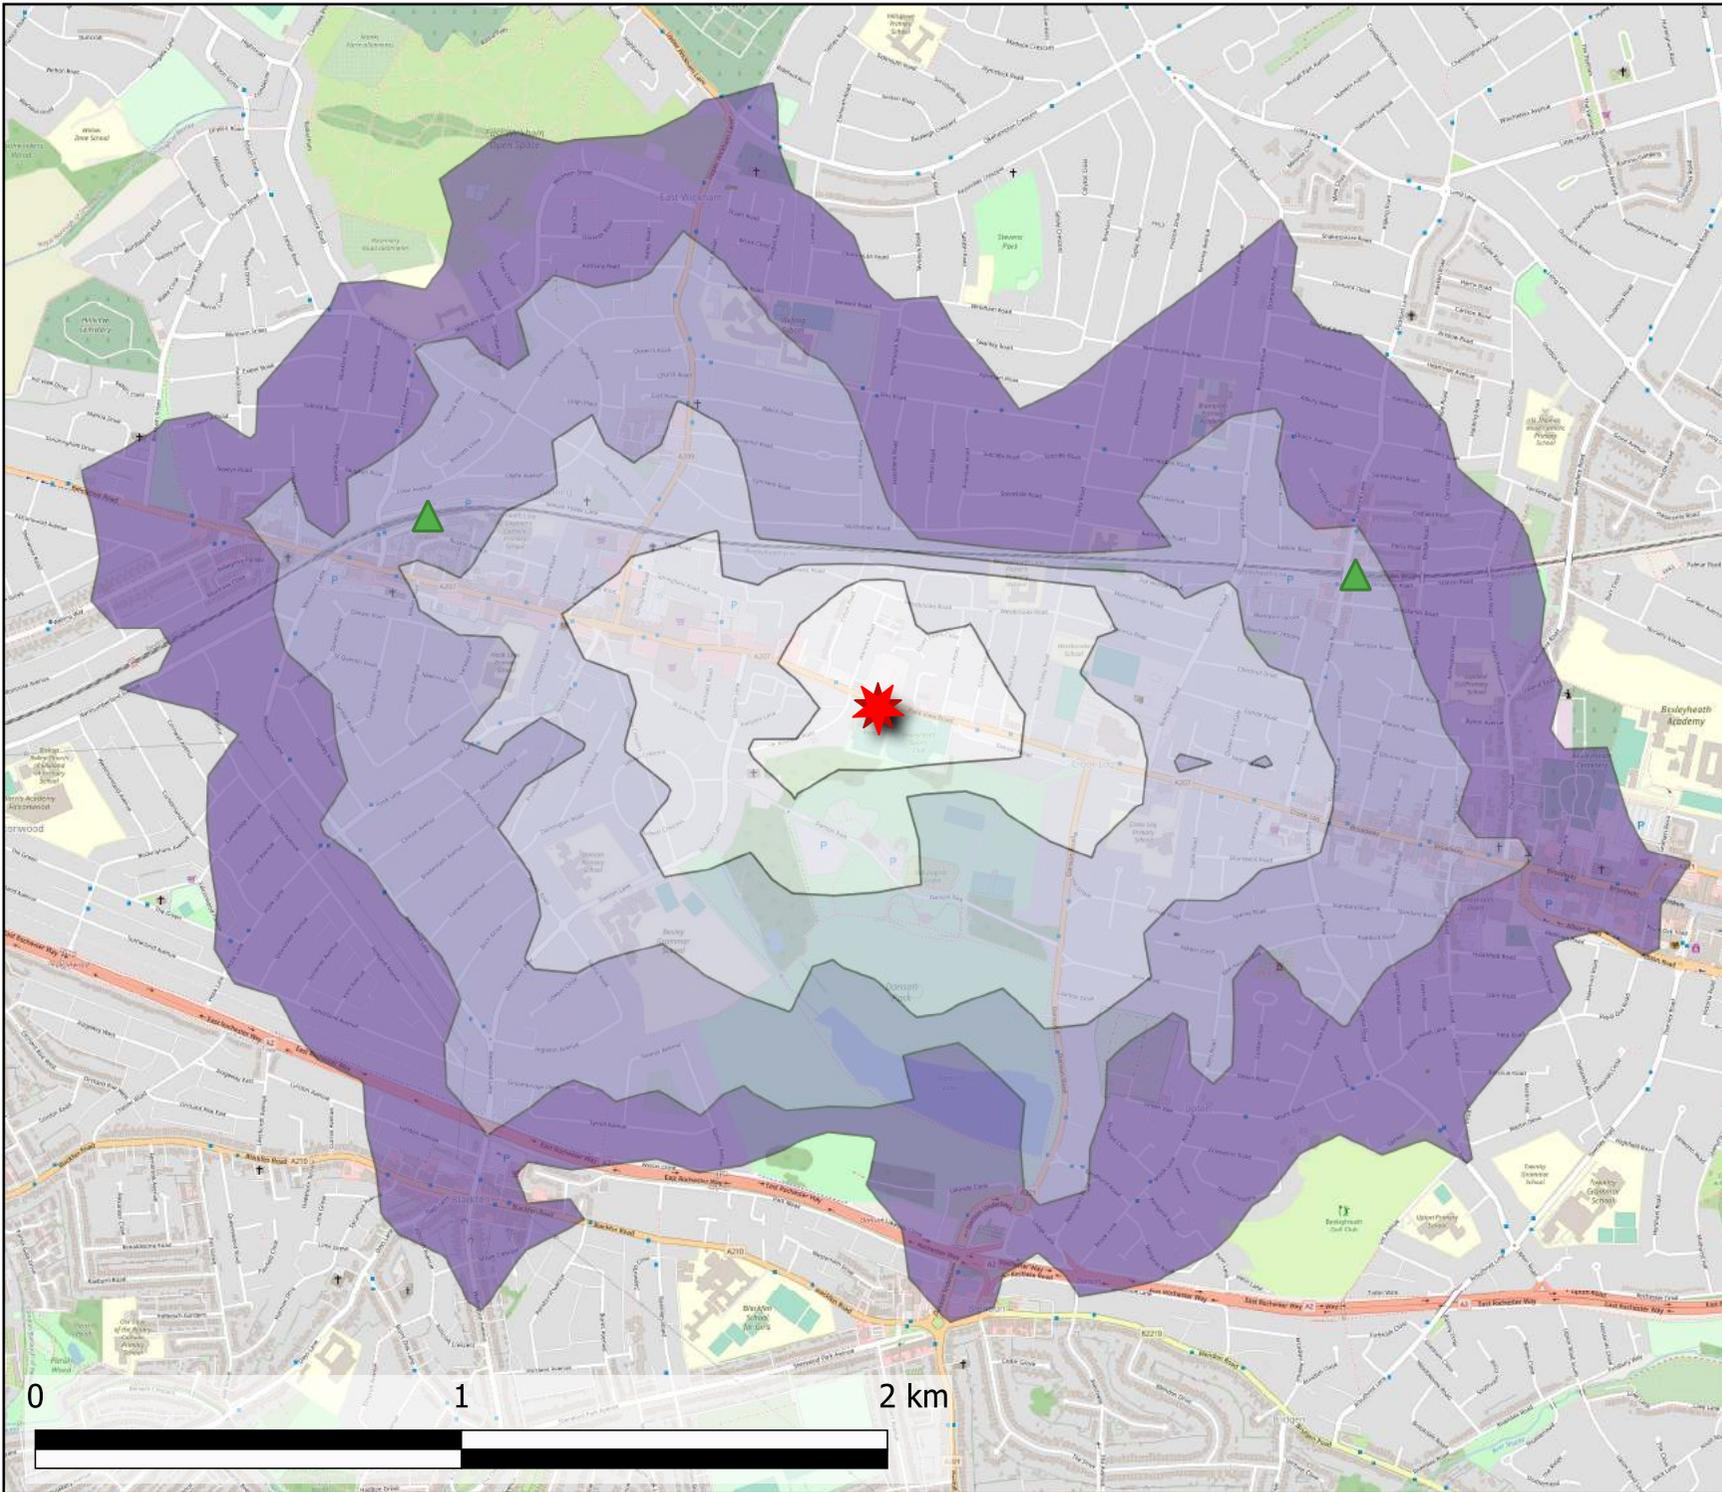

- 10.1 This Transport Assessment has been prepared to accompany a planning application by Woolwich Road Limited for the redevelopment of Welling United Football Club, located at Park View Road Football Stadium and 1-3 Park View Road, Welling DA16 1SY (herein referred to as 'the site').
- 10.2 The site is located to the east of Welling town centre and benefits from close proximity to the A207, A221 and A2 as well as a number of bus stops and Welling railway station. The site falls within the administrative boundary of the London Borough of Bexley (LBB), who act as both the planning and highways authority.
- 10.3 In summary, this Transport Assessment has identified the following:
- ▶ Bus services are accessible adjacent to the site;
 - ▶ Regular rail services are available from welling station;
 - ▶ A variety of amenities can be accessed close to the site;
 - ▶ A survey of the surrounding area suggests that there is capacity to accommodate parking demand from the proposed residential units;
 - ▶ A robust set of mitigation measures are proposed to address the additional parking demand. This includes two car club spaces;
 - ▶ Cycle parking will be provided in accordance with relevant standards; and
 - ▶ An Event Management Plan has been prepared to address potential increases in spectator numbers caused by the football stadium proposals. This includes securing off-street parking for spectators in various car parks near to the site.

Conclusion

- 10.4 In view of the above, the proposed development is considered to be acceptable in transport terms and meets with national and local policy criteria. The assessment work undertaken has shown that there will not be any demonstrable harm arising from the proposed scheme and it will not cause any severe impacts. Therefore, there are no traffic or transport related reasons why the development should not be granted planning consent.

Appendix G

TRICS Output

Calculation Reference: AUDIT-734001-231129-1153

TRIP RATE CALCULATION SELECTION PARAMETERS:

Land Use : 03 - RESIDENTIAL
Category : C - FLATS PRIVATELY OWNED
MULTI-MODAL TOTAL VEHICLES

Selected regions and areas:

01	GREATER LONDON	
	BT BRENT	1 days
	EN ENFIELD	1 days
	HO HOUNSLOW	1 days
	HV HAVERING	1 days

This section displays the number of survey days per TRICS® sub-region in the selected set

Primary Filtering selection:

This data displays the chosen trip rate parameter and its selected range. Only sites that fall within the parameter range are included in the trip rate calculation.

Parameter: No of Dwellings
 Actual Range: 14 to 493 (units:)
 Range Selected by User: 6 to 493 (units:)

Parking Spaces Range: All Surveys Included

Parking Spaces per Dwelling Range: Selected: 0.07 to 1 Actual: 0.07 to 3.17

Bedrooms per Dwelling Range: All Surveys Included

Percentage of dwellings privately owned: All Surveys Included

Public Transport Provision:

Selection by: Include all surveys

Date Range: 01/01/15 to 20/10/22

This data displays the range of survey dates selected. Only surveys that were conducted within this date range are included in the trip rate calculation.

Selected survey days:

Tuesday 1 days
 Wednesday 2 days
 Friday 1 days

This data displays the number of selected surveys by day of the week.

Selected survey types:

Manual count 4 days
 Directional ATC Count 0 days

This data displays the number of manual classified surveys and the number of unclassified ATC surveys, the total adding up to the overall number of surveys in the selected set. Manual surveys are undertaken using staff, whilst ATC surveys are undertaken using machines.

Selected Locations:

Suburban Area (PPS6 Out of Centre) 3
 Edge of Town 1

This data displays the number of surveys per main location category within the selected set. The main location categories consist of Free Standing, Edge of Town, Suburban Area, Neighbourhood Centre, Edge of Town Centre, Town Centre and Not Known.

Selected Location Sub Categories:

Development Zone 1
 Residential Zone 2
 Built-Up Zone 1

This data displays the number of surveys per location sub-category within the selected set. The location sub-categories consist of Commercial Zone, Industrial Zone, Development Zone, Residential Zone, Retail Zone, Built-Up Zone, Village, Out of Town, High Street and No Sub Category.

Inclusion of Servicing Vehicles Counts:

Servicing vehicles Included 3 days - Selected
 Servicing vehicles Excluded 1 days - Selected

Secondary Filtering selection:

Use Class:

C3 4 days

This data displays the number of surveys per Use Class classification within the selected set. The Use Classes Order (England) 2020 has been used for this purpose, which can be found within the Library module of TRICS®.

Population within 500m Range:

All Surveys Included

Secondary Filtering selection (Cont.):

Population within 1 mile:

10,001 to 15,000	1 days
20,001 to 25,000	1 days
25,001 to 50,000	1 days
50,001 to 100,000	1 days

This data displays the number of selected surveys within stated 1-mile radii of population.

Population within 5 miles:

125,001 to 250,000	1 days
500,001 or More	3 days

This data displays the number of selected surveys within stated 5-mile radii of population.

Car ownership within 5 miles:

0.6 to 1.0	3 days
1.1 to 1.5	1 days

This data displays the number of selected surveys within stated ranges of average cars owned per residential dwelling, within a radius of 5-miles of selected survey sites.

Travel Plan:

Yes	1 days
No	3 days

This data displays the number of surveys within the selected set that were undertaken at sites with Travel Plans in place, and the number of surveys that were undertaken at sites without Travel Plans.

PTAL Rating:

No PTAL Present	1 days
2 Poor	2 days
5 Very Good	1 days

This data displays the number of selected surveys with PTAL Ratings.

LIST OF SITES relevant to selection parameters

1	BT-03-C-02 ENGINEERS WAY WEMBLEY	BLOCKS OF FLATS	BRENT
	Suburban Area (PPS6 Out of Centre) Development Zone Total No of Dwellings: 472 <i>Survey date: WEDNESDAY 30/11/16</i>		<i>Survey Type: MANUAL</i>
2	EN-03-C-03 NORTH CIRCULAR ROAD PALMERS GREEN	BLOCKS OF FLATS	ENFIELD
	Suburban Area (PPS6 Out of Centre) Residential Zone Total No of Dwellings: 27 <i>Survey date: WEDNESDAY 08/11/17</i>		<i>Survey Type: MANUAL</i>
3	HO-03-C-05 PARK LANE HOUNSLOW CRANFORD	BLOCK OF FLATS	HOUNSLOW
	Edge of Town Residential Zone Total No of Dwellings: 14 <i>Survey date: FRIDAY 06/03/20</i>		<i>Survey Type: MANUAL</i>
4	HV-03-C-02 WATERLOO ROAD ROMFORD	BLOCKS OF FLATS	HAVERING
	Suburban Area (PPS6 Out of Centre) Built-Up Zone Total No of Dwellings: 493 <i>Survey date: TUESDAY 22/11/16</i>		<i>Survey Type: MANUAL</i>

This section provides a list of all survey sites and days in the selected set. For each individual survey site, it displays a unique site reference code and site address, the selected trip rate calculation parameter and its value, the day of the week and date of each survey, and whether the survey was a manual classified count or an ATC count.

20:00 - 21:00	3	171	0.014	3	171	0.014	3	171	0.028
21:00 - 22:00									
22:00 - 23:00									
23:00 - 24:00									
Total Rates:			0.488			0.479			0.967

This section displays the trip rate results based on the selected set of surveys and the selected count type (shown just above the table). It is split by three main columns, representing arrivals trips, departures trips, and total trips (arrivals plus departures). Within each of these main columns are three sub-columns. These display the number of survey days where count data is included (per time period), the average value of the selected trip rate calculation parameter (per time period), and the trip rate result (per time period). Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

The survey data, graphs and all associated supporting information, contained within the TRICS Database are published by TRICS Consortium Limited ("the Company") and the Company claims copyright and database rights in this published work. The Company authorises those who possess a current TRICS licence to access the TRICS Database and copy the data contained within the TRICS Database for the licence holders' use only. Any resulting copy must retain all copyrights and other proprietary notices, and any disclaimer contained thereon.

The Company accepts no responsibility for loss which may arise from reliance on data contained in the TRICS Database. [No warranty of any kind, express or implied, is made as to the data contained in the TRICS Database.]

Parameter summary

Trip rate parameter range selected: 14 - 493 (units:)
 Survey date range: 01/01/15 - 20/10/22
 Number of weekdays (Monday-Friday): 4
 Number of Saturdays: 0
 Number of Sundays: 0
 Surveys automatically removed from selection: 0
 Surveys manually removed from selection: 0

This section displays a quick summary of some of the data filtering selections made by the TRICS® user. The trip rate calculation parameter range of all selected surveys is displayed first, followed by the range of minimum and maximum survey dates selected by the user. Then, the total number of selected weekdays and weekend days in the selected set of surveys are shown. Finally, the number of survey days that have been manually removed from the selected set outside of the standard filtering procedure are displayed.

Total trip rates (the sum of the column) are also displayed at the foot of the table.

*To obtain a trip rate, the average (mean) trip rate parameter value (TRP) is first calculated for all selected survey days that have count data available for the stated time period. The average (mean) number of arrivals, departures or totals (whichever applies) is also calculated (COUNT) for all selected survey days that have count data available for the stated time period. Then, the average count is divided by the average trip rate parameter value, and multiplied by the stated calculation factor (shown just above the table and abbreviated here as FACT). So, the method is: COUNT/TRP*FACT. Trip rates are then rounded to 3 decimal places.*

Appendix H

Enterprise Car Club Proposal

Car Club proposal for Welling Utd Stadium

September 2023

Welling Utd Stadium Car Club - Introduction

Enterprise Car Club is an hourly, self-service car rental company, available to members 24/7/365. Vehicles can be picked up in and around a city or region and booked in advance or at the last minute. Located in over 180 UK cities and communities our 100,000+ members have access to over 2,500 cars and vans.

Enterprise Holdings is the parent company of Enterprise Car Club. A car club is a natural extension of the local car-rental service that Enterprise Rent-A-Car has pioneered in the UK over the last 20 years.

Enterprise Car Club will be able to provide new communities with a wider variety of vehicles backed by the Enterprise Rent-A-Car neighbourhood network and award-winning customer service.

Enterprise Car Club already hosts over 150 vehicles at developments across the UK. These range from City Centre residential developments in London and major regional cities (e.g., Manchester, Leeds, Bristol, Edinburgh, Glasgow, and Newcastle), to mixed use developments, business parks and non-city centre locations on the fringes of cities or outside major conurbations.

The mobility decisions and behaviour of residents of new developments/communities (business or private) are influenced by their mobility needs in and around their new location, but also across the region and country. A good range of mobility solutions in one and not the other risks travel behaviours remaining focussed on vehicle ownership and far lower adoption of more sustainable and multi-modal options.

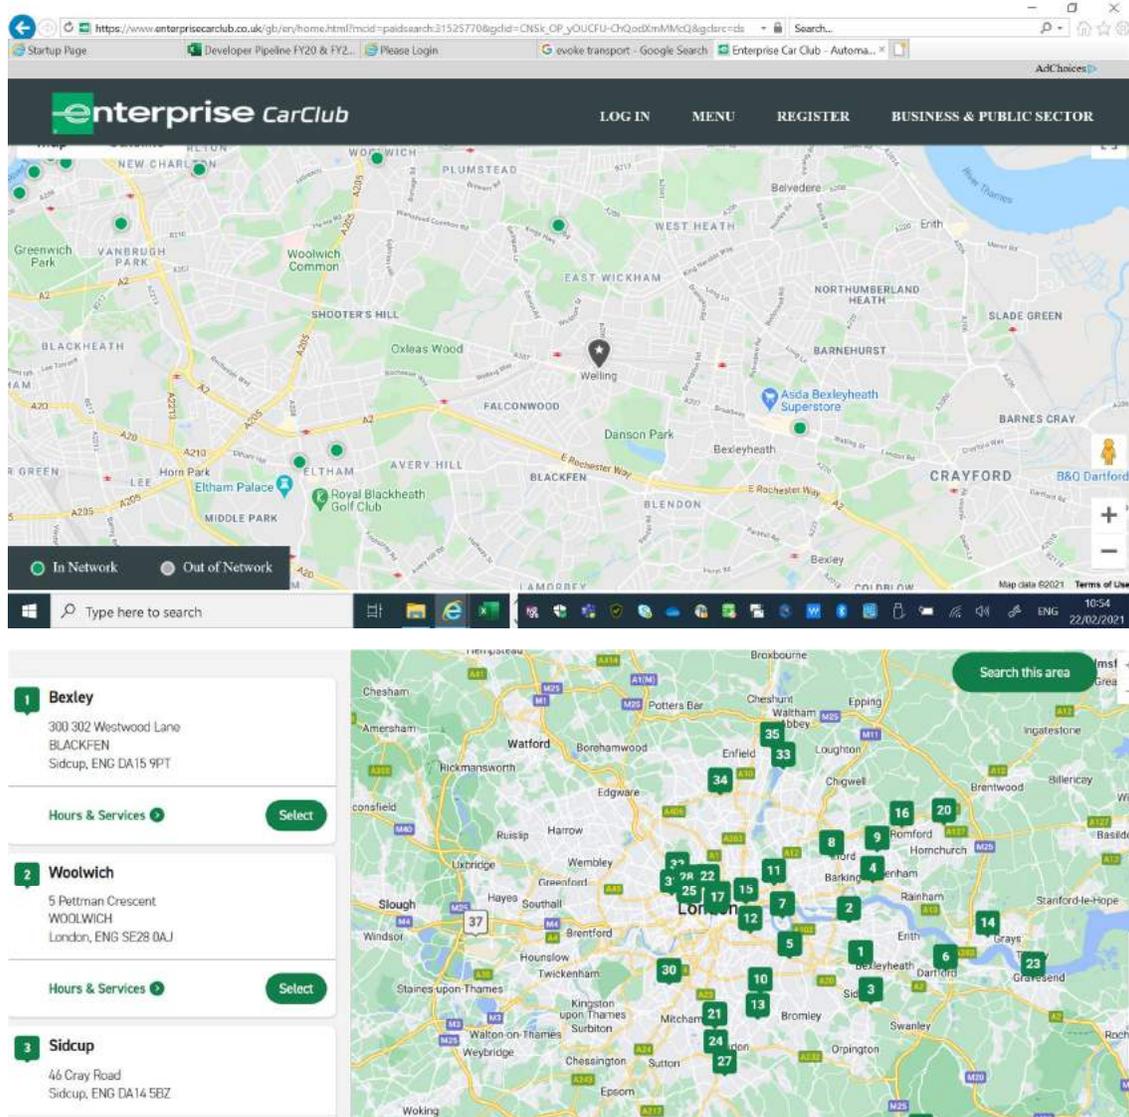

Enterprise has an already established and rapidly expanding national car club and car rental network providing shared mobility from Inverness to the Isle of Wight, Northern Ireland to East Anglia. Large urban centres are covered but towns and smaller communities are also now served by Enterprise Car Club and Enterprise Rent-A-Car. By the time this new development starts to be occupied mobility solutions from Enterprise will be available across the UK integrated physically and digitally alongside other sustainable modes such as public transport, active travel, and shared mobility options. Enterprise Car Club already has vehicles within 500 metres of 181 UK train station. These stations represent 34% of UK national rail journeys.

Enterprise Car Club is integrated with Enterprise Rent-A-Car as a brand, business, and proposition for residents of the development. This means that personal members of Enterprise Car Club will receive a discount with Enterprise Rent-A-Car and can access all its services in the immediate area around the development and across the UK. Together this integrated approach provides the most powerful alternative to car ownership for individuals and businesses.

Enterprise in the area around Welling Utd Stadium

Currently Enterprise Car Club does not have a presence in the development area(see first map for current closest locations – Plumstead and Bexleyheath) . Discussions are ongoing to expand this in partnerships with council’s, train operators and developers. This car club presence is supported by a strong branch presence (see second map below) and Enterprise also has “[month or more](#)” and commercial vehicles options in the region via [Enterprise Flex-E-Rent](#).

Combined these options make Enterprise the best possible mobility partner for the Welling Utd Stadium community whether residents need a car for a few hours, days or months.

The screenshot displays the Enterprise Car Club website interface. At the top, there is a navigation bar with the logo and links for LOGIN, MENU, REGISTER, and BUSINESS & PUBLIC SECTOR. Below the navigation bar is a map of the Welling area, showing various locations like Plumstead, Bexleyheath, and Welling. The map includes a search bar and a legend for 'In Network' and 'Out of Network' locations. Below the map, there is a list of three branches:

- 1 Bexley**
300 302 Westwood Lane
BLACKFEN
Sidcup, ENG DA15 9PT
Hours & Services [Select](#)
- 2 Woolwich**
5 Pettman Crescent
WOOLWICH
London, ENG SE28 0AJ
Hours & Services [Select](#)
- 3 Sidcup**
46 Cray Road
Sidcup, ENG DA14 5BZ

To the right of the list is a larger map showing the surrounding area with numbered markers (1-35) indicating various locations. A search bar at the top right of this map says 'Search this area'.

The National Car Club

Welling residents will also have access via their Car Club membership to over 2,500 vehicles across the UK. The map below shows the current Enterprise Car Club network which is expanding rapidly.

Welling residents who join Enterprise Car Club can use any of these vehicles and if bookings are cancelled more than 5 hours in advance there are no charges. Enterprise locates car club vehicles with public transport in mind enabling members to travel in combination with public transport and only driving for the smallest possible portion of the journey. One example of this is Enterprise Car Club's presence along the LNER network connecting York to Darlington, Durham, Newcastle, Berwick-upon-Tweed, and Edinburgh to the north and Wakefield, Doncaster, Newark, Peterborough and London Kings Cross to the south.

Car Club Proposal for Welling Utd Stadium

Given the scale of the development (114 units) and the lack of existing car clubs within the area we advise the following:

- Minimum car club – Up to 2 vehicles on a 2-year rolling contract. Starting with 1, for additional vehicles see highlighted bullet point.
- Vehicles provided – petrol/hybrid/EV – EV's can be supplied provided correct charging infrastructure with minimum 7kw charging in place.
- Total cost - £24,000 ex VAT.
- Additional vehicles will be provided when commercially viable to do so at no additional cost. Enterprise and the client will develop a utilisation model which will trigger additional vehicles in response to demand. This model will consider utilisation levels above 30% and the distribution of demand across the week and working week. If you wish for a larger car club fleet on site when the above model does not deem it commercially viable, additional vehicles can be provided at £12,000 ex VAT.
- Incentive for site only residents – 2 year's free membership of Enterprise Car Club for and £50 drive time.
- For the wider community a bespoke offer could be added, dependent on what the client would like to offer in terms of membership and driving credit.
- The offer will be provided to multiple residents at the same address and throughout the contracted period.
- All residents joining would also be able to get a discount with Enterprise Rent-A-Car. The combination of car club and car rental is very attractive to people as an alternative to car ownership. This would be promoted via a leaflet customised to the offer (see below example), via digital/social media marketing and events
- Any Businesses located at the development site will be provided with free Enterprise Car Club membership for themselves and their employees
- Attendance at sales and promotional events
- Dedicated 24/7 Clubhouse Team and 24/7/365 online reservation system available, by phone or on our app.
- Creation of reports and statistics for the developer and council.
- Zero vehicle maintenance and cleaning responsibilities.
- Dedicated personal development account manager.
- Car Club personal members will receive discount on rentals with Enterprise-Rent-A-Car. Details of nearest branch are below which offers a free "We'll pick you up service".
- Car Club members holding both a corporate and personal membership can link their accounts, so they can have a single sign on to the car club booking system.

One Enterprise and Future Mobility

Car Club usage can be supported and supplemented day traditional car rental (typically for longer journeys) via a local branch and the free “We’ll pick you up service” or a delivery service to the business park. One-way hires are available via the traditional Enterprise Rent-A-Car network.

Enterprise has developed “Enterprise Travel Direct” ETD to assist businesses wishing employees to have access to both car club and daily rental mobility options alongside the use of employee’s own cars for business mobility (grey fleet). ETD allows businesses to load the parameters of their travel policy/hierarchy into the system to manage and direct their employees to the travel option most suitable to their needs in terms of cost, carbon savings etc.

Enterprise is developing Mobility as a Service and Ridesharing services which can also assist business parks provide efficient mobility for residents.

Globally, Enterprise is at the forefront of new mobility solutions and over \$2 billion has been invested in a variety of businesses and technologies that will be critical in solving many of the current and future mobility challenges. Enterprise is seeking to bring innovative Mobility as a Service (MaaS) platforms to cities and large sites that will provide users with transport on demand across all modes. Employees could receive “Mobility Credits” from employers and the platform could be white labelled to the location or business.

In response to the changing mobility required by employers in 2020-21 due to the COVID19 situation Enterprise is working to evolve new solutions for employers to assist with employee mobility during the working day and for the employees commute to work. More information can be made available. Enterprise also has implemented a clean car pledge because of the current COVID19 situation. See below for more details.

Complete Clean Pledge

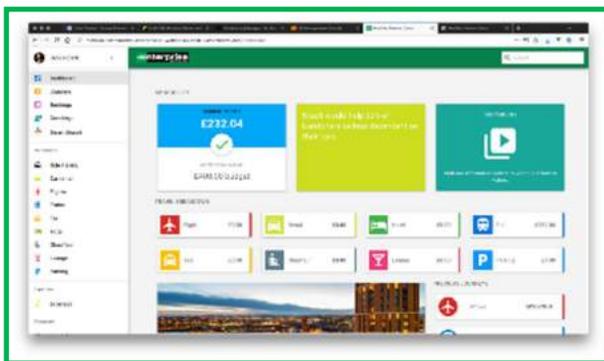

Today and every day, we are committed to maintaining the highest standards of cleanliness in the industry. Now more than ever, our customers and employees deserve to know we stand behind that commitment with the Complete Clean Pledge. We pledge to go above and beyond our already rigorous cleaning protocols, including strict sanitizing procedures to protect the health and safety of all.

[Learn more about our Complete Clean Pledge.](#)

Below are details on our modified services and the steps we are taking company-wide to protect customers and employees while remaining available to those who need us during this challenging time.

Enterprise 9 Seat Minibus

- Low Emission Zone Compliant
- Department for Transport Approved
- Compact and Easy to Drive
- Climate Control
- Side Load Cassette Step
- Drive on Standard Licence (B1)
- Speed Limited to 62 mph
- Single Seats
- Reverse Camera
- M1 Vehicle – Approved for Passenger Transportation
- Adjustable and Fully Flexible Seating Layout

- 

Your nearest car is:
Wallshut Wood,
Bristol, BS16 1GJ
- 

Rent by the hour from
£2.50/hr* & 21p/mile
- 

Fuel, taxes and
servicing included
- 

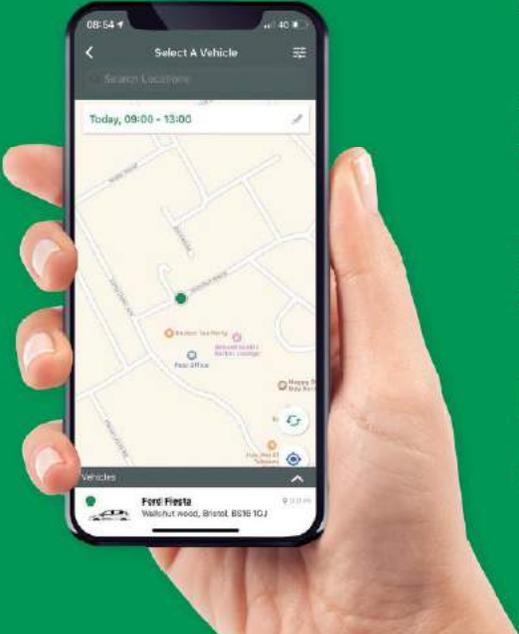

Access 1,400+
vehicles nationwide
- 

24/7 access
year round

Book & Unlock

from the palm of your hand

Use our app to access cars and vans parked on streets, at train stations, car parks and Enterprise Rent-A-Car branches across the UK. Membership includes fuel, insurance and breakdown cover, meaning you only pay for a vehicle when you need it.

Appendix I

On-Street Parking Beat Survey

This sheet provides a brief description of what information is held within each tab of this document, and how the results were achieved.

RESULTS TAB

Occupancy Vehicles by Link Table :- This table shows the occupancy per street / per beat. Therefore the maximum total value is the maximum number of vehicles present within the study area throughout the survey day. The graph below this table shows the "Accumulative" capacity - street by street stacked.

PARKING TAB

Vehicle Information :- This tab contains all the VEHICLE information data which has been linked spatially to its nearest classified link restriction. This information can be easily queried by using the filter option to select specific streets, timebins, classification and much more. .

CAPACITY

Length of classifications (m) by link :- This table shows the length (Metres) of each classification within each street, that has been surveyed as part of the project. The length of each restriction is taken from a site visit using GIS and measuring the kerbside length. Only kerbside restrictions are captured, the more enforceable the restriction the higher it is in the survey hierarchy. For example a Double Yellow line is more enforceable than a dropped kerb. Where there is no kerbside restriction present this will be classified as "Unrestricted".

Calculated capacity (spaces) by link :- The table shows the number of spaces available within each individual network section (No of Spaces). This is calculated by two methods. The first method is to count the actual number of physical individual marked spaces within the section (example 5 number Parallel Bays). The second method is used where the spaces are not individually marked or there is no restriction present, to calculate the capacity using this method we would take each individual section length and divide it by 5.5 m (Standard car length) rounding the value "DOWN" at all calculations. As each restriction length is calculated individually, the combined value of capacity will often be less than the total length divided by 5.5m.

LINKS CLASSIFIED

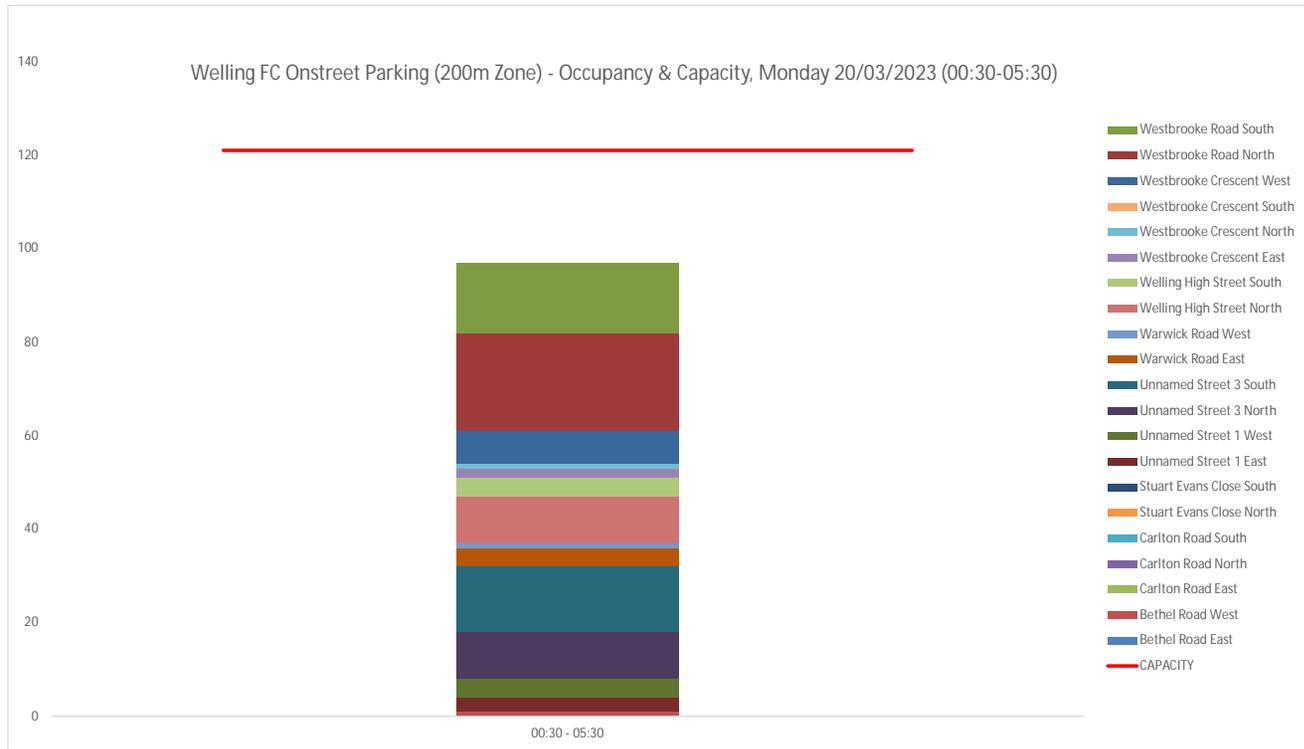

Link Classification :- This tab contains all the individual link (Classified Restrictions) within the survey area providing details on the ID, Class, Length and Capacity. The column titled "Count of Vehicles" is the number of vehicles captured parking on the section throughout the survey period which is used to calculate the next column "Turnover" by dividing the number of vehicles captured by the number of spaces available.

STRESS LEVEL

This table shows the capacity stress level (Legally Parked Only) for each street within the survey area for each beat conducted. It is possible for % capacity to exceed 100% if vehicle are parking closer together and the number of vehicles recorded within a beat is greater than that of the Capacity Calculation detailed above (Example. a section length of 29.2 m / 5 m = 5 Vehicles. However, in practise it would be possible to accommodate 6 vehicles).

This sheet provides a brief description of what information is held within each tab of this document, and how the results were achieved.

RESULTS TAB

Occupancy Vehicles by Link Table :- This table shows the occupancy per street / per beat. Therefore the maximum total value is the maximum number of vehicles present within the study area throughout the survey day. The graph below this table shows the "Accumulative" capacity - street by street stacked.

PARKING TAB

Vehicle Information :- This tab contains all the VEHICLE information data which has been linked spatially to its nearest classified link restriction. This information can be easily queried by using the filter option to select specific streets, timebins, classification and much more. .

CAPACITY

Length of classifications (m) by link :- This table shows the length (Metres) of each classification within each street, that has been surveyed as part of the project. The length of each restriction is taken from a site visit using GIS and measuring the kerbside length. Only kerbside restrictions are captured, the more enforceable the restriction the higher it is in the survey hierarchy. For example a Double Yellow line is more enforceable than a dropped kerb. Where there is no kerbside restriction present this will be classified as "Unrestricted".

Calculated capacity (spaces) by link :- The table shows the number of spaces available within each individual network section (No of Spaces). This is calculated by two methods. The first method is to count the actual number of physical individual marked spaces within the section (example 5 number Parallel Bays). The second method is used where the spaces are not individually marked or there is no restriction present, to calculate the capacity using this method we would take each individual section length and divide it by 5.5 m (Standard car length) rounding the value "DOWN" at all calculations. As each restriction length is calculated individually, the combined value of capacity will often be less than the total length divided by 5.5m.

LINKS CLASSIFIED

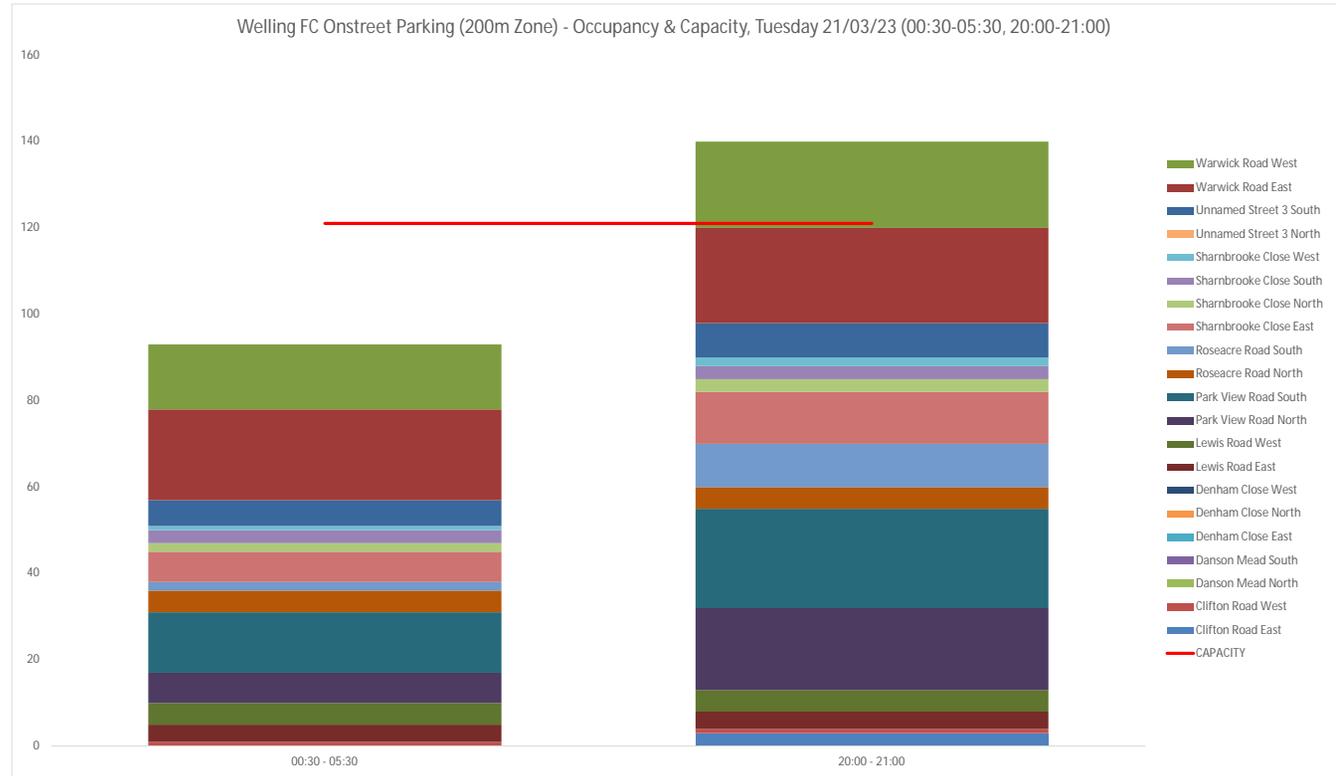

Link Classification :- This tab contains all the individual link (Classified Restrictions) within the survey area providing details on the ID, Class, Length and Capacity. The column titled "Count of Vehicles" is the number of vehicles captured parking on the section throughout the survey period which is used to calculate the next column "Turnover" by dividing the number of vehicles captured by the number of spaces available.

STRESS LEVEL

This table shows the capacity stress level (Legally Parked Only) for each street within the survey area for each beat conducted. It is possible for % capacity to exceed 100% if vehicle are parking closer together and the number of vehicles recorded within a beat is greater than that of the Capacity Calculation detailed above (Example. a section length of 29.2 m / 5 m = 5 Vehicles. However, in practise it would be possible to accommodate 6 vehicles).

This sheet provides a brief description of what information is held within each tab of this document, and how the results were achieved.

RESULTS TAB

Occupancy Vehicles by Link Table :- This table shows the occupancy per street / per beat. Therefore the maximum total value is the maximum number of vehicles present within the study area throughout the survey day. The graph below this table shows the "Accumulative" capacity - street by street stacked.

PARKING TAB

Vehicle Information :- This tab contains all the VEHICLE information data which has been linked spatially to its nearest classified link restriction. This information can be easily queried by using the filter option to select specific streets, timebins, classification and much more. .

CAPACITY

Length of classifications (m) by link :- This table shows the length (Metres) of each classification within each street, that has been surveyed as part of the project. The length of each restriction is taken from a site visit using GIS and measuring the kerbside length. Only kerbside restrictions are captured, the more enforceable the restriction the higher it is in the survey hierarchy. For example a Double Yellow line is more enforceable than a dropped kerb. Where there is no kerbside restriction present this will be classified as "Unrestricted".

Calculated capacity (spaces) by link :- The table shows the number of spaces available within each individual network section (No of Spaces). This is calculated by two methods. The first method is to count the actual number of physical individual marked spaces within the section (example 5 number Parallel Bays). The second method is used where the spaces are not individually marked or there is no restriction present, to calculate the capacity using this method we would take each individual section length and divide it by 5.5 m (Standard car length) rounding the value "DOWN" at all calculations. As each restriction length is calculated individually, the combined value of capacity will often be less than the total length divided by 5.5m.

LINKS CLASSIFIED

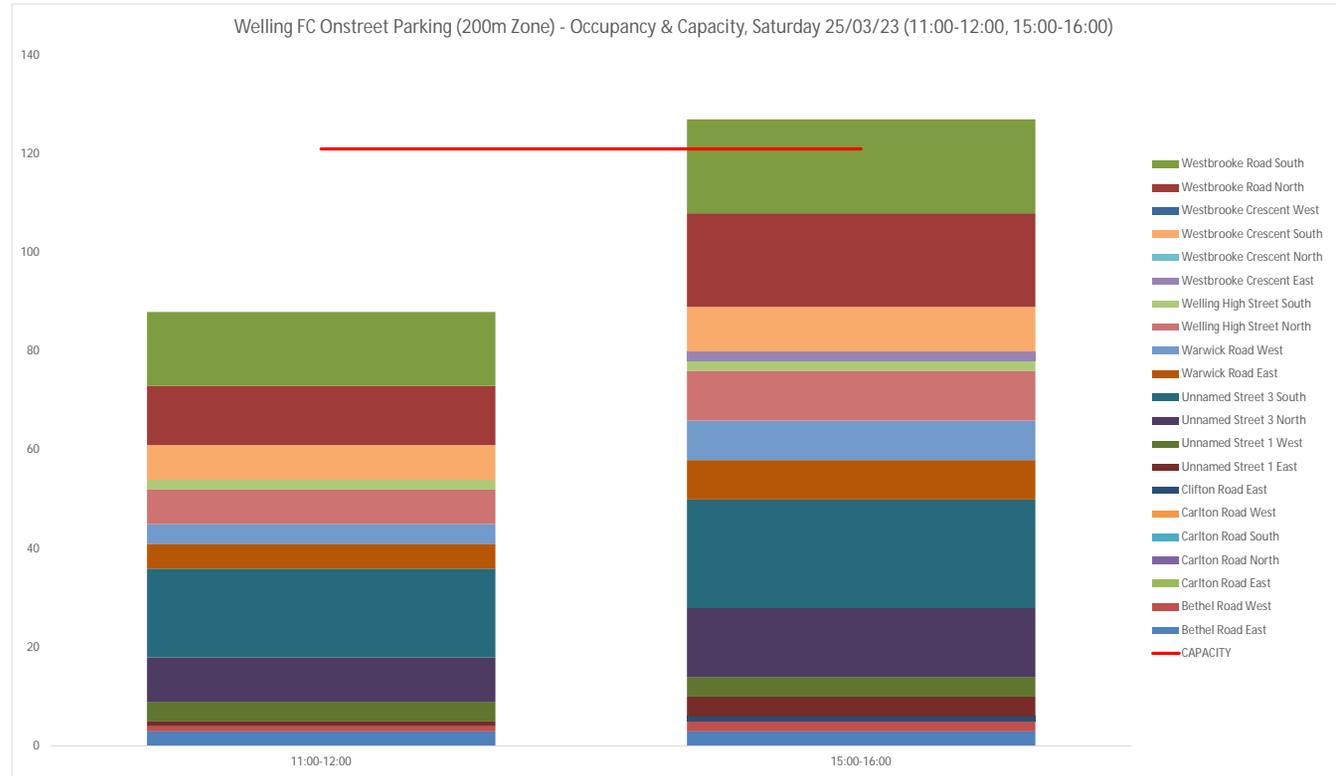

Link Classification :- This tab contains all the individual link (Classified Restrictions) within the survey area providing details on the ID, Class, Length and Capacity. The column titled "Count of Vehicles" is the number of vehicles captured parking on the section throughout the survey period which is used to calculate the next column "Turnover" by dividing the number of vehicles captured by the number of spaces available.

STRESS LEVEL

This table shows the capacity stress level (Legally Parked Only) for each street within the survey area for each beat conducted. It is possible for % capacity to exceed 100% if vehicle are parking closer together and the number of vehicles recorded within a beat is greater than that of the Capacity Calculation detailed above (Example. a section length of 29.2 m / 5 m = 5 Vehicles. However, in practise it would be possible to accommodate 6 vehicles).

This sheet provides a brief description of what information is held within each tab of this document, and how the results were achieved.

RESULTS TAB

Occupancy Vehicles by Link Table :- This table shows the occupancy per street / per beat. Therefore the maximum total value is the maximum number of vehicles present within the study area throughout the survey day. The graph below this table shows the "Accumulative" capacity - street by street stacked.

PARKING TAB

Vehicle Information :- This tab contains all the VEHICLE information data which has been linked spatially to its nearest classified link restriction. This information can be easily queried by using the filter option to select specific streets, timebins, classification and much more. .

CAPACITY

Length of classifications (m) by link :- This table shows the length (Metres) of each classification within each street, that has been surveyed as part of the project. The length of each restriction is taken from a site visit using GIS and measuring the kerbside length. Only kerbside restrictions are captured, the more enforceable the restriction the higher it is in the survey hierarchy. For example a Double Yellow line is more enforceable than a dropped kerb. Where there is no kerbside restriction present this will be classified as "Unrestricted".

Calculated capacity (spaces) by link :- The table shows the number of spaces available within each individual network section (No of Spaces). This is calculated by two methods. The first method is to count the actual number of physical individual marked spaces within the section (example 5 number Parallel Bays). The second method is used where the spaces are not individually marked or there is no restriction present, to calculate the capacity using this method we would take each individual section length and divide it by 5.5 m (Standard car length) rounding the value "DOWN" at all calculations. As each restriction length is calculated individually, the combined value of capacity will often be less than the total length divided by 5.5m.

LINKS CLASSIFIED

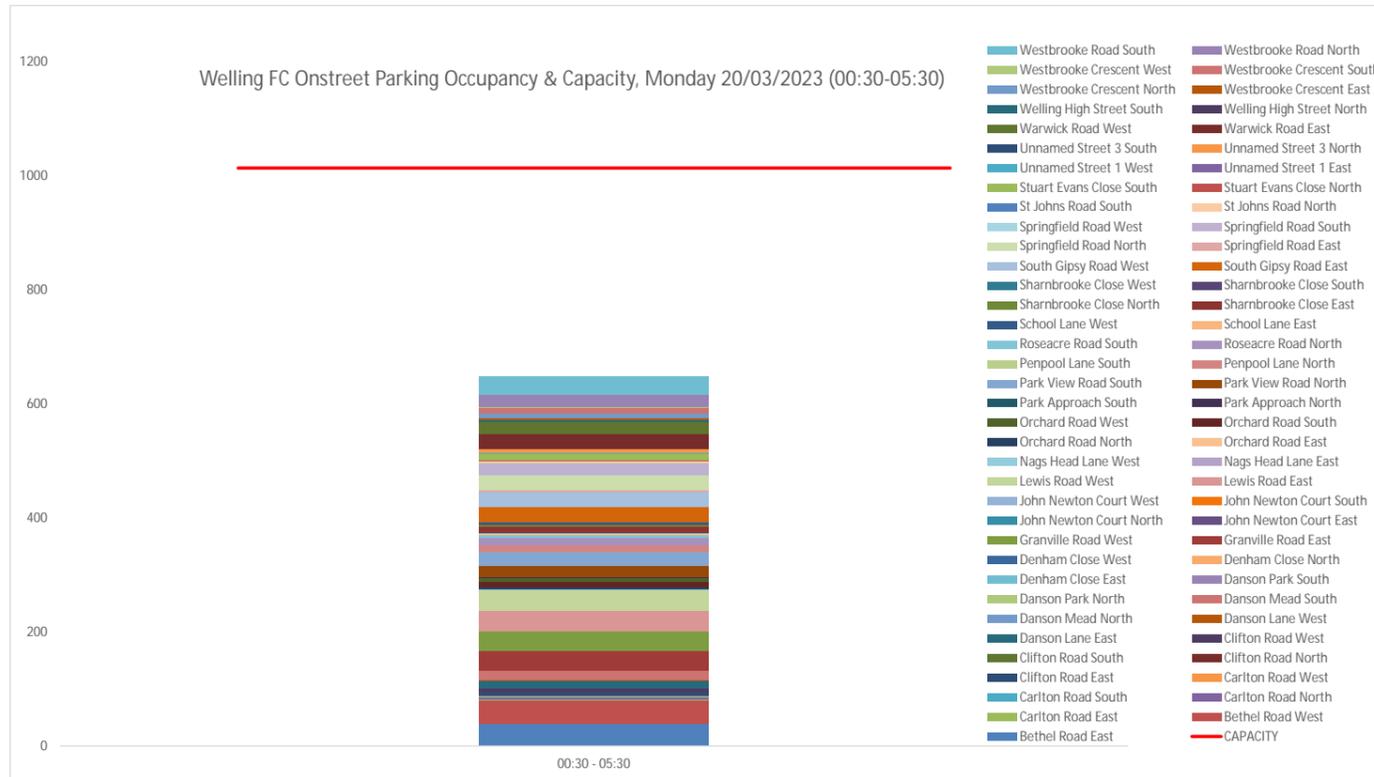

Link Classification :- This tab contains all the individual link (Classified Restrictions) within the survey area providing details on the ID, Class, Length and Capacity. The column titled "Count of Vehicles" is the number of vehicles captured parking on the section throughout the survey period which is used to calculate the next column "Turnover" by dividing the number of vehicles captured by the number of spaces available.

STRESS LEVEL

This table shows the capacity stress level (Legally Parked Only) for each street within the survey area for each beat conducted. It is possible for % capacity to exceed 100% if vehicle are parking closer together and the number of vehicles recorded within a beat is greater than that of the Capacity Calculation detailed above (Example. a section length of 29.2 m / 5 m = 5 Vehicles. However, in practise it would be possible to accommodate 6 vehicles).

This sheet provides a brief description of what information is held within each tab of this document, and how the results were achieved.

RESULTS TAB

Occupancy Vehicles by Link Table :- This table shows the occupancy per street / per beat. Therefore the maximum total value is the maximum number of vehicles present within the study area throughout the survey day. The graph below this table shows the "Accumulative" capacity - street by street stacked.

PARKING TAB

Vehicle Information :- This tab contains all the VEHICLE information data which has been linked spatially to its nearest classified link restriction. This information can be easily queried by using the filter option to select specific streets, timebins, classification and much more. .

CAPACITY

Length of classifications (m) by link :- This table shows the length (Metres) of each classification within each street, that has been surveyed as part of the project. The length of each restriction is taken from a site visit using GIS and measuring the kerbside length. Only kerbside restrictions are captured, the more enforceable the restriction the higher it is in the survey hierarchy. For example a Double Yellow line is more enforceable than a dropped kerb. Where there is no kerbside restriction present this will be classified as "Unrestricted".

Calculated capacity (spaces) by link :- The table shows the number of spaces available within each individual network section (No of Spaces). This is calculated by two methods. The first method is to count the actual number of physical individual marked spaces within the section (example 5 number Parallel Bays). The second method is used where the spaces are not individually marked or there is no restriction present, to calculate the capacity using this method we would take each individual section length and divide it by 5.5 m (Standard car length) rounding the value "DOWN" at all calculations. As each restriction length is calculated individually, the combined value of capacity will often be less than the total length divided by 5.5m.

LINKS CLASSIFIED

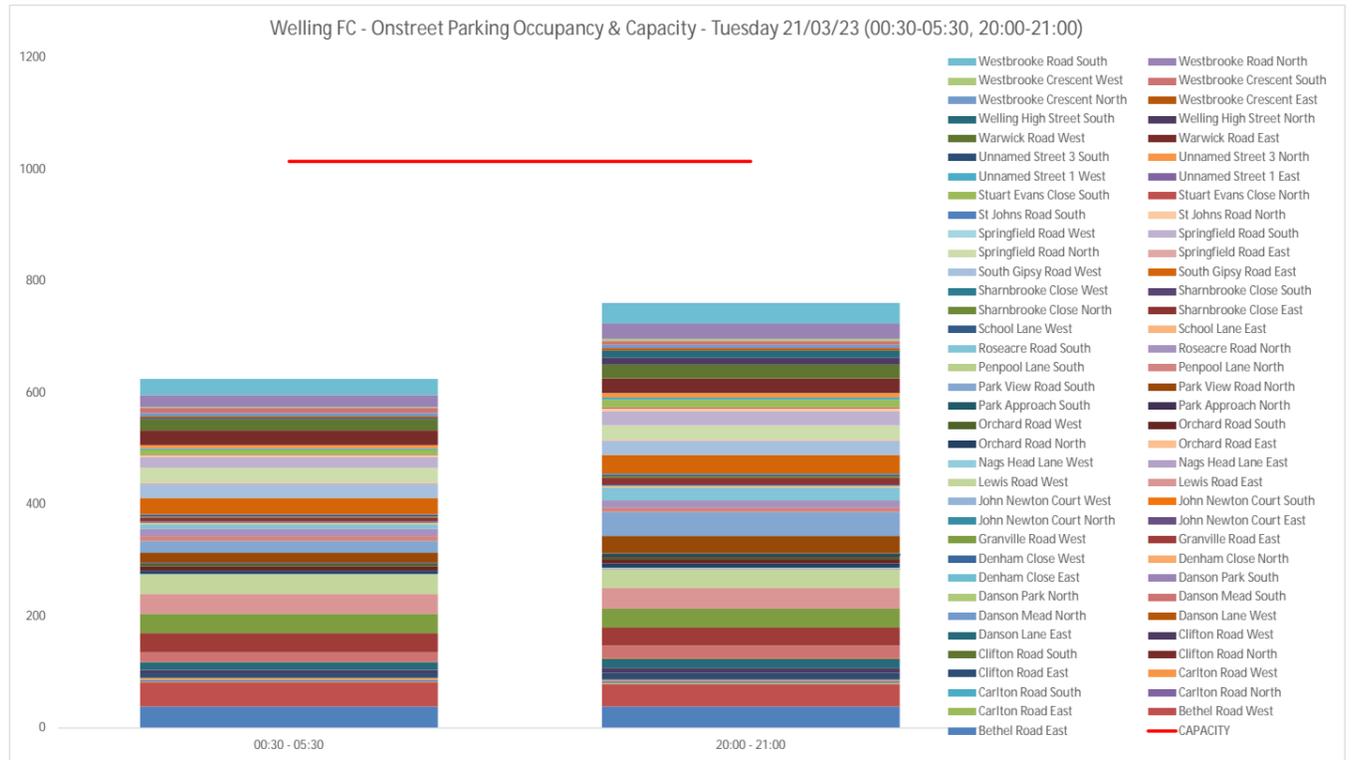

Link Classification :- This tab contains all the individual link (Classified Restrictions) within the survey area providing details on the ID, Class, Length and Capacity. The column titled "Count of Vehicles" is the number of vehicles captured parking on the section throughout the survey period which is used to calculate the next column "Turnover" by dividing the number of vehicles captured by the number of spaces available.

STRESS LEVEL

This table shows the capacity stress level (Legally Parked Only) for each street within the survey area for each beat conducted. It is possible for % capacity to exceed 100% if vehicle are parking closer together and the number of vehicles recorded within a beat is greater than that of the Capacity Calculation detailed above (Example. a section length of 29.2 m / 5 m = 5 Vehicles. However, in practise it would be possible to accommodate 6 vehicles).

This sheet provides a brief description of what information is held within each tab of this document, and how the results were achieved.

RESULTS TAB

Occupancy Vehicles by Link Table :- This table shows the occupancy per street / per beat. Therefore the maximum total value is the maximum number of vehicles present within the study area throughout the survey day. The graph below this table shows the "Accumulative" capacity - street by street stacked.

PARKING TAB

Vehicle Information :- This tab contains all the VEHICLE information data which has been linked spatially to its nearest classified link restriction. This information can be easily queried by using the filter option to select specific streets, timebins, classification and much more. .

CAPACITY

Length of classifications (m) by link :- This table shows the length (Metres) of each classification within each street, that has been surveyed as part of the project. The length of each restriction is taken from a site visit using GIS and measuring the kerbside length. Only kerbside restrictions are captured, the more enforceable the restriction the higher it is in the survey hierarchy. For example a Double Yellow line is more enforceable than a dropped kerb. Where there is no kerbside restriction present this will be classified as "Unrestricted".

Calculated capacity (spaces) by link :- The table shows the number of spaces available within each individual network section (No of Spaces). This is calculated by two methods. The first method is to count the actual number of physical individual marked spaces within the section (example 5 number Parallel Bays). The second method is used where the spaces are not individually marked or there is no restriction present, to calculate the capacity using this method we would take each individual section length and divide it by 5.5 m (Standard car length) rounding the value "DOWN" at all calculations. As each restriction length is calculated individually, the combined value of capacity will often be less than the total length divided by 5.5m.

LINKS CLASSIFIED

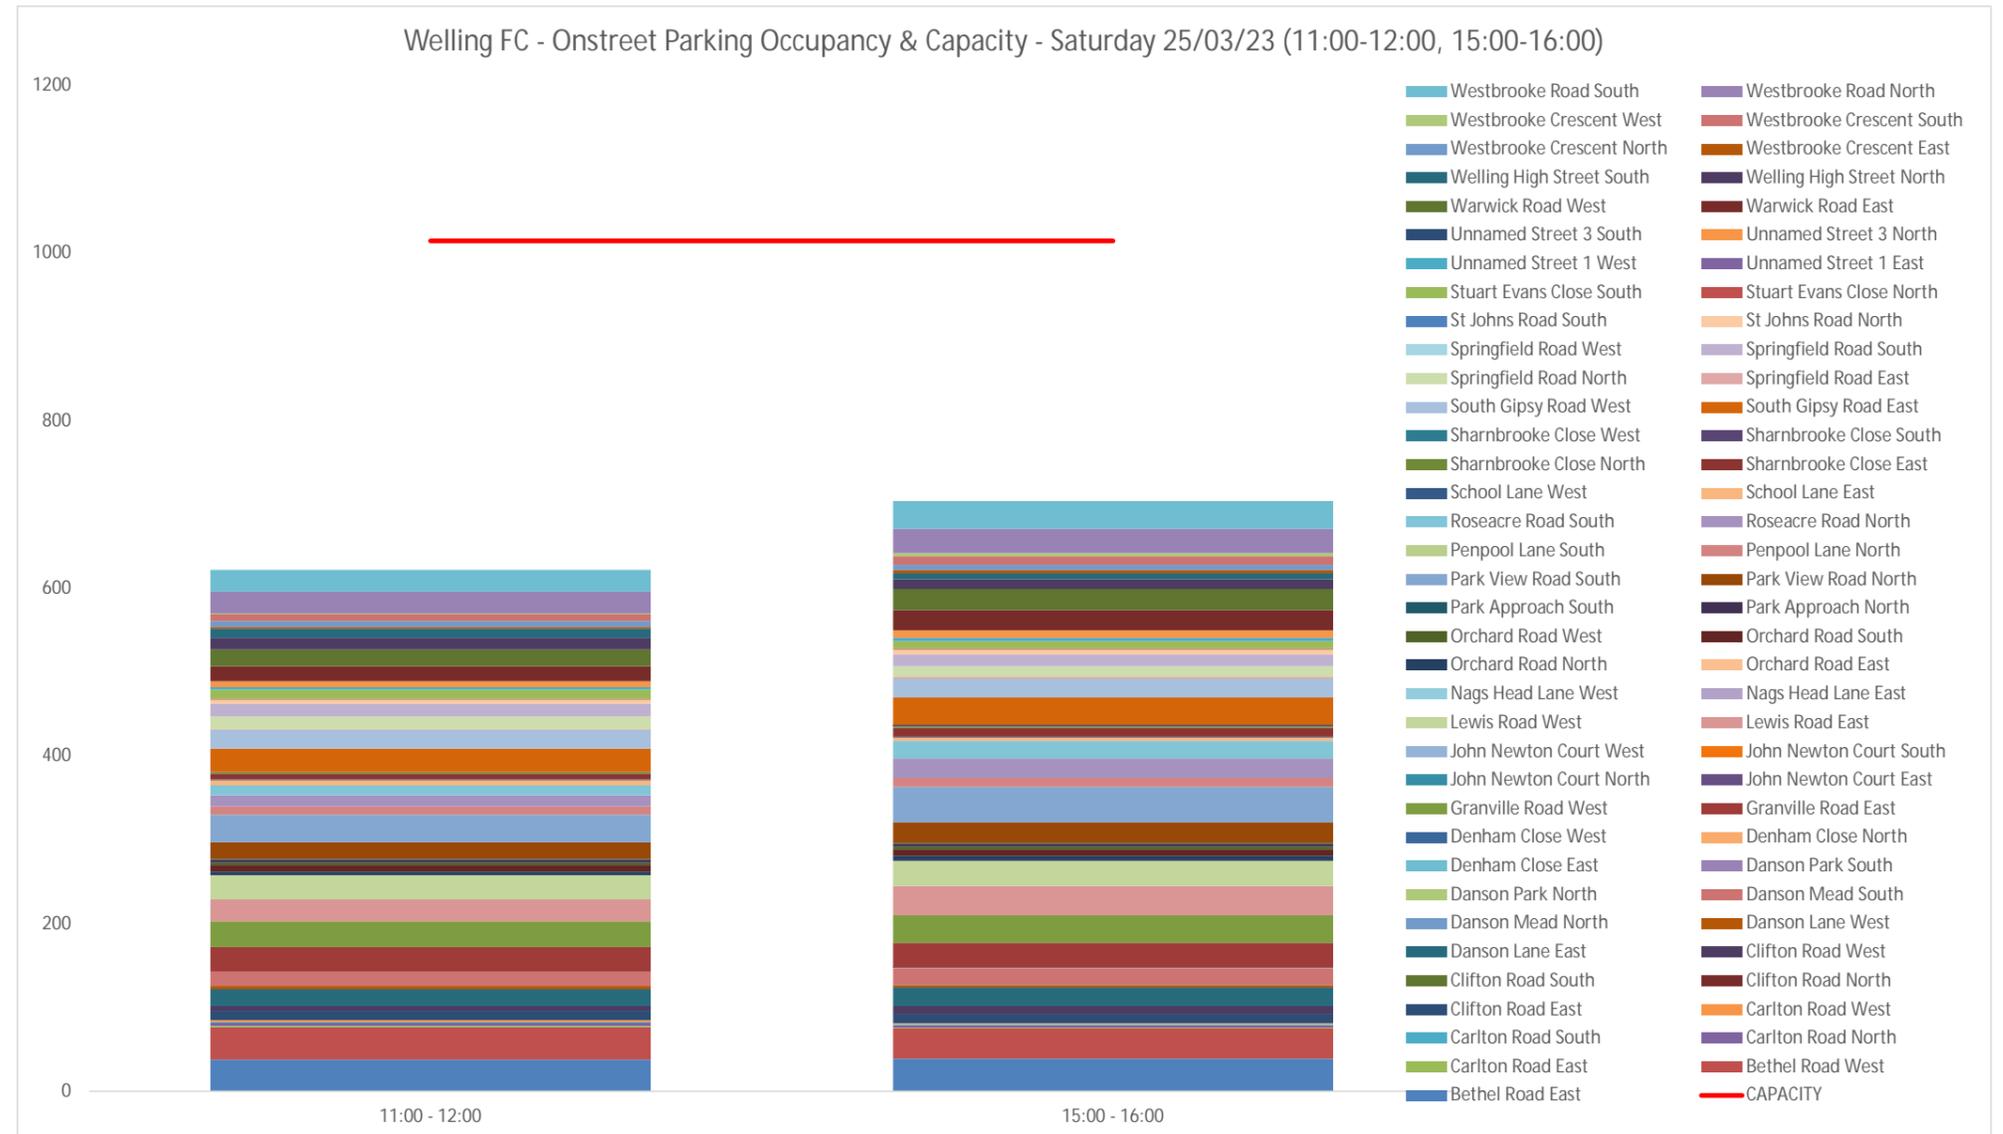

Link Classification :- This tab contains all the individual link (Classified Restrictions) within the survey area providing details on the ID, Class, Length and Capacity. The column titled "Count of Vehicles" is the number of vehicles captured parking on the section throughout the survey period which is used to calculate the next column "Turnover" by dividing the number of vehicles captured by the number of spaces available.

STRESS LEVEL

This table shows the capacity stress level (Legally Parked Only) for each street within the survey area for each beat conducted. It is possible for % capacity to exceed 100% if vehicle are parking closer together and the number of vehicles recorded within a beat is greater than that of the Capacity Calculation detailed above (Example. a section length of 29.2 m / 5 m = 5 Vehicles. However, in practise it would be possible to accommodate 6 vehicles).
