Key

- Individual tree to be retained
 - Individual tree requiring removal to facilitate the development
 - Tree group to be retained
 - Tree group to be removed
 - Scrub/Hedge/Shrubs/Saplings to be retained
 - Scrub/Hedge/Shrubs/Saplings to be removed
- BS 5837:2012 Tree Quality Categories - Table 1
- Category A - High quality
 - Category B - Moderate quality
 - Category C - Low quality
 - Category U - Unsuitable for retention
- Root protection area (RPA) calculated in accordance with Section 4.6 - BS5837:2012
 - Construction Exclusion Zone - Protective fencing (e.g. Heras style). To be assembled in accordance with Section 6.2 - BS5837:2012 (see inset for example barriers)
 - Security fencing. This will provide tree protection for majority of site but must be installed prior to construction works.
 - Hard surfaces to be constructed above existing ground level using 'No-Dig' construction methods (see Arboricultural Practice Note 12)

NOTES:

- Refer to RPS Tree Schedule for further details.
- Survey based on a visual inspection from the ground and is not intended as a full arboricultural inspection.
- Plan produced in accordance with recommendations set out in BS 5837:2012. Trees in relation to design, demolition and construction.
- Due to the legal protection afforded to breeding birds vegetation removal should not take place during the bird nesting period, generally, although not restricted to, March - August inclusive.
- Survey plotted using sub-metre GPS survey device onto Topographical Survey provided by the client.

Tree Protection Specification

All vegetation identified for removal should be removed prior to the start of works. The Tree Protection Plan provides details of vegetation removal and alterations.

An assessment of crown impacts should be carried out by the Consultant Arboriculturist or the Clients Landscape Manager prior to implementing tree protection, so that any potential requirements for access pruning have been assessed.

Any access pruning should be carried out prior to the installation of the Tree Protection Fencing and carried out to the standards set out in BS5838:2010 Tree Works - Recommendations.

The Protection Fencing should be to the specification below:

Figure 1 - Examples of above-ground stabilising systems

The Protection should be form of braced trees bracing panels secured with anti-tension clips and with supports fixed into the ground to prevent movement once installed. Manufacturers recommendations should be provided to assure correct installation.

All personnel should be made aware of the protected areas and instructed to keep them free of materials, waste and refuse and. Soil disturbance should be prohibited and flow of any kind, including foot traffic should also be excluded within the root protection area (RPA) unless previously agreed and adequate ground protection has been installed. Where foot traffic is agreed within the RPA, single thickness surfaced boards laid over a compressible material on a geotextile, or supported by suitable ground surface. Where vehicular access through the RPA is agreed an engineer should be consulted to design adequate ground protection methods.
