Sustainability Statement

- The proposed cabin will be highly insulated to minimise heat loss.
- The materials used for the construction will be from sustainable sources.
- The main house already has a large solar array and battery bank for electricity generation and an air source heat pump for hot water. The proposed cabin will be connected to the electricity supply from the house. As such, the power requirements of the cabin will be entirely from renewable sources (solar power).
- The cabin will allow for improved home working conditions, reducing the requirement for travel to office space further afield, hence reducing travel costs and associated carbon emissions.
