

Ground floor function room

Having walked through this room and the outdoor space in close proximity it appears that there are a couple of available locations to site the outdoor units. Again a second visit would be required to agree the exact location.

Supply and install 2no Daikin FHA125A ceiling suspended units, RZASG125MY1 condensers and BRC1H519W7 controllers.

Additional items:

Provisional cost for 5no mains wiring

If any issues were encountered with air movement in the ventilated under-croft during any periods of extremely high temperatures, then we could retrofit an extraction system to pull heat out of the area.

In my honest opinion this would not be required however, if we were to install such a system then a provisional sum  would cover this.

We trust that we have interpreted your requirements correctly at this stage and look forward to hearing from you in due course.

Yours sincerely

Stuart Frudd
