Dear John

**Re: Farnsfield Village Centre**

Thank you for your recent enquiry reference above. Having conducted a site visit at the Village Centre, I have pleasure in proposing the following.

**First Floor Function room**

After attending site and assessing all the available options for a location for the outdoor condensing units I am comfortable with units sitting behind the cage in the ventilated under-croft.

As discussed, we would utilise the recessed storage area for installation of the interior pipework, and I agree with Steve McGregor regarding the interior pipe routes. None of the internal pipe work would be exposed as it would be installed in trunking.

Again, as discussed on site there are two possible ways of mounting the indoor air conditioning units.

1. Getting a fixing and spanning the cross beams
2. Installing flush to the ceiling. With this option we would require a further site visit with triple extending ladders to ascertain whether the units could be hung through the void.

There would be no cost difference between the two options.

Supply and install 3no Daikin FHA125A ceiling suspended units, RZASG125MY1 condensers and BRC1H519W7 controllers
