All rights in this report are reserved. No part of it may be reproduced, edited or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, or stored in any retrieval system of any nature, without our written permission. Its content and format are for the exclusive use of Mr A Painter and his agents in dealing with this site. It may not be sold, lent, hired out or divulged to any third party not directly involved in this site without the written consent of Urban Tree Experts. It may be reproduced as part of a planning application.

The validity of this report ceases at the prescribed time limit or after one year from the survey, or if the site conditions change due to unspecified works that affect the site whichever is the sooner.

EXECUTIVE SUMMARY

Urban Tree Experts was commissioned by Mr A Painter to carry out a dusk emergence survey on the garage at Tithe Barn Cottage, Ridge Lane, Newnham RG27 9AS. The survey was undertaken at the property to provide further evidence to support the initial findings (a negative result) and conclusions from the preliminary ecological appraisal (bats) report ref SPH/NP/PEA-23/25.04, and to inform appropriate mitigation for the proposed works, if required. This report is prepared to support a forthcoming planning application to Basingstoke and Deane Council.

The application site comprises a detached, brick-built property with an attached garage. The remainder of the site comprises a gravel driveway and a large garden, with some trees and shrubs throughout. The site itself offers good foraging and commuting habitat for bats.

A desk top study was conducted prior to the survey to review existing information about the site and its surroundings and to inform the design of subsequent bat surveys, if required. The desk top study was conducted based upon a 2km search radius and it revealed three statutory designated sites are located within, and no current European Protected Species Licences (EPSLs) for bats have been granted within 2km of the proposed development site.

Due to the location of the site, a search of both the Hampshire and Berkshire and South Buckinghamshire bat group records was requested, and they confirmed 11 different species within the 2-kilometer search radius, including Myotis *sp.* A summary of these records is included at Appendix 1.

The dusk emergence survey was conducted on Friday 4 August 2023. A limited number of bats were heard and seen foraging in and around the site throughout the survey and none were seen emerging from or re-entering the garage to roost.

This report confirms the findings of the survey, completed by an experienced licensed bat ecologist, in accordance with current best practice guidance where possible, and outlines any ecological constraints or issues with the proposed works.

The combined evidence from the preliminary survey and activity survey provides a high level of confidence in support of the opinions set out in this report. No bats or evidence of bats were observed during the PEA and no bats were seen entering or emerging from the garage during the activity survey. This indicates that the garage has not been used as a roost by bats and that an EPSL from Natural England (NE) is not required.

1. Introduction

1.1 Instruction

Urban Tree Experts were commissioned by Mr A Painter to carry out a dusk emergence survey on the garage at Tithe Barn Cottage, Ridge Lane, Newnham RG27 9AS.

1.2 Aims and Objectives

The dusk emergence survey is designed to:

Identify the presence/likely absence of bats using the building to roost.

Estimate the size and status of any existing bat roost within the building.

Establish where the bats are accessing the building.

Determine the potential impacts on any bat roost from the proposed development.

Determine if an EPSL is required.

The survey was carried out in accordance with Bat Surveys for Professional Ecologists: Good Practice Guidelines (3rd edition).

1.3 Proposed Works

The survey was commissioned in connection with a a forthcoming planning application to Basingstoke and Deane Council, the details of which were unknown at the time of survey.

1.4 Surveyor Background and Experience

The activity survey was conducted by Nick Powell and two remote night vision cameras/batloggers and the report was compiled by Simon Holmes MSc. CEnv, a Natural England licensed bat ecologist.

Simon Holmes MSc. CEnv. Simon holds Class 3 (CL19) and 4 Bat (CL20) Licenses (Nos. 17637 and 17638) and Science and Education license (SCI-29096). He has 34 years' experience of carrying out bat surveys and bat conservation work.

Nick Powell. Nick commenced surveying bats in 2022 and has received training in bat surveying techniques, bat detector use, bat biology, bat identification, acoustic monitoring and echolocation analysis.

2. Survey Methodology

2.1 Constraints/Limitations

An assessment of the building exterior was conducted on 4 August 2023, prior to the survey being undertaken and there were no constraints or limitations to the survey. Weather conditions were suitable for the surveys, being conducted during warm weather and a number of bats were seen and heard foraging and in transit during the surveys.

2.2 Dusk Survey

The dusk emergence survey was conducted on the evening of Friday 4 August 2023. The surveyor/remote cameras/batloggers were stationed (as shown in Figure 1 on page 5), to ensure the features identified in the preliminary bat report could be observed.

During the survey bat activity was monitored using three BatLogger M bat detectors together with three Sony Handycam night shot video cameras with high intensity IR lamps. The detectors and cameras were fitted with SD cards for recording bat activity, allowing for later analysis with Kaleidoscope Pro 3 software and VLC media player.

BS5837 - Tree Surveys - Ecological Consulting

Figure 1 – Garage at Tithe Barn Cottage, Newnham, surveyor/remote camera/batlogger location.

During the surveys no bats were seen emerging from and/or returning to the building to roost. In total only 2 different species were recorded and identified foraging and commuting around the site. A simple summary of the bats recorded can be seen in Table 2 on page 6. The most frequently used flight paths of bats cannot be shown as only 1 bat was seen during the survey.

3. Survey Findings

3.1 Dusk Survey

The weather conditions and surveyor details from the survey can be found in Table 1 below.

Table 1 – Surveyor details and weather conditions for the bat activity survey conducted on the garage at Tithe Barn Cottage, Newnham.

Table 2. Summary of bat calls recorded in the vicinity of the garage at Tithe Barn

Cottage Newnham

| Date | Surveyor Position | Time | Seen | Heard | Species | Comments |
|----------|----------------------|------------------|------|-------|--------------------------------------|--|
| 04/08/23 | A | 20:30 – 22:20 | Y | Y | Noctule and common pipistrelle | At 21.14 (27 minutes after sunset) a transit call from a common pipistrelle bat was heard. At 22.06 the last bat call of the survey was heard (again a common pipistrelle) with the bat being seen only once (at 21.26) in transit over the building. A very faint transit call from a noctule was heard at 21.37, the bat was not seen. |
| 04/08/23 | В | 20:30 – 22:20 | Y | Y | Common pipistrelle | At 21.00 a call from a common pipistrelle bat was heard and thereafter up until 22.06 another 14 calls from common pipistrelle bats were recorded. A bat was captured on camera in transit across the top of the building, at 21.26, no other images were recorded. |
| 04/08/23 | С | 20:30 – 22:20 | Y | Y | Common and soprano pipistrelle | At 20.59 (12 minutes after sunset) a call from a common pipistrelle bat was heard and thereafter, until 22.06, another 11 calls from common pipistrelle bats were heard. 2 calls from soprano pipistrelle bats were heard at 21.33. A bat was captured on camera foraging around the rear of the building and it remained for a minute at 21.48. |

4. **Conclusions/Interpretation**

- The calls detected and recorded from the survey provided identification of common pipistrelle, Pipistrellus pipistrellus, soprano pipistrelle, Pipistrellus pygmaeus and noctule, Nyctalus noctule, foraging and/or transiting across the site. The longest and most frequent calls were from common pipistrelle bats.
- The garage has crevice like features suitable for bats to roost and the surrounding area 4.2 provides good habitat for bats in which to forage and roost however no bats were seen emerging from or returning to the garage to roost. The surveyor observations and recordings provide a high level of confidence in the species detected during the survey on the garage at Tithe Barn Cottage.
- 4.3 Pipistrelle bats are one of the first emerging bat species after sunset, frequently emerging within 20 minutes after sunset. As the first common pipistrelle bat call was at 12 minutes after sunset, it is most probably roosting close by, but did not emerge from the garage. Whilst no bats were seen emerging from or returning to the garage to roost, this does not mean that they will not be present in the future as bats are known to be transient and use a wide variety of crevice like features opportunistically.
- 4.4 The survey conditions were good, with warm weather, insects flying however the very low level of bat calls and field observations were, in our opinion, due to better roosting and foraging areas being available in the immediate vicinity.
- 4.5 The bat calls and field observations provide a high level of confidence in support of the opinions as set out in this report. Bat activity was dominated by common pipistrelles, with the number of calls and visual observations indicating a relatively low number of individuals (<2).

BS5837 - Tree Surveys - Ecological Consulting

4.6 The cumulative evidence leads me to conclude that bats are not roosting at the garage at Tithe Barn Cottage. The building has a negligeable potential to support roosting bats and an EPSL is not required.

BSBBG has agreed an exchange of data with TVERC which enables us to provide records belonging to them with the grid reference given to 1 km precision. Such records are indicated by *TVERC under location. Enquirers are recommended to contact TVERC direct to obtain full locations details. Please note that TVERC provides BSBBG with an annual update of their records, so they may hold records for your search area that BSBBG does not yet have access to. Requests for information may be submitted via the TVERC website www.tverc.org.uk

However I must, as usual, point out that our records should not be considered a complete record of bats in the area since we only record sites where we, as a Bat Group, have been called to assist members of the public or Natural England (what was English Nature) to deal with 'bat problems', recorded bats whilst undertaking bat group events and walks or taken part in National Monitoring of bats for the Bat Conservation Trust. Records from the general public and bat group members submitted to the records officer are also kept in the database. To be certain what bats may or may not be present it would be necessary to undertake a detailed bat survey at various times throughout the year.

All payment details will be contained within the invoice.
