To whom it may concern,

We are applying for planning permission because we want to safely remove the asbestos building at the rear of our property, which, due to neglect from the previous owner, has become something of a safety hazard. In particular, the asbestos roofing has become cracked due to the vegetation that was growing there.

We plan to construct a log cabin in place of the old building as per the attached 3D image. This kind of product is commonly used as a garden room in the neighbourhood. We believe that the replacement building will provide a more aesthetically pleasing entity than the current building.

Since the new building will no longer require an entrance onto the lane at the rear of our property. The new building will be slightly shorter than the old one and the brick wall that forms the boundary will be continued along the entire face of the boundary in the same style as the existing wall (please see attached photos).

Yours faithfully,
Jan Stankiewicz
