NOISE IMPACT ASSESSMENT

These are established playing fields, since 1966.
There is football and tennis played regularly on the site

The Multi-Use Games Area (MUGA) will support that established use and will be no different to the activities, which already take place on the site.

As there is an established planning use for this site, the only reason we are making a planning application is for the surrounding fence, which is over two metres and for the erection of four floodlight columns, which will be 6m in height.

In summary there is no additional noise created, other than children and adults playing a sporting game.
