Tank preparatory works REQUIRED prior to our arrival on site: To be carried out by WO Silmon Limited

Adequate access and ventilation into tank must be given; both the flange and internal to be removed by the Main Contractor/Customer or their nominated Sub-Contractor before any decommissioning can take place.

Please note that the tank pipework can only be foam filled/decommissioned if the Pump(s) has/have been removed and a 2 inch adapter(s) has/have been fitted onto the Pump riser(s) to enable our operative to connect onto the pipe work.

Tank pipework and vents can only be foam filled/decommissioned where tank pipework is accessible and it is practically possible.

Site Arrival

On arrival to site Lees Industrial Services' Personnel to:

1. Safely park the vehicle and put on all required PPE as you exit the cab.
2. Report to the site office to book in and carry out site induction as required.
3. Liaise with the Main Contractor/Customer with regard to the traffic management plan to ensure safe parking of the vehicle onsite.

4. Issue the Main Contractor/Customer with Method Statement and Risk Assessment.
5. Discuss the programme of works and any other works ongoing that may affect our operation.
6. Confirm acceptance of this Method Statement by the Main Contractor/Customer and amend as necessary to site specific items.
7. Once the vehicle has been safely parked, ensure the entire working area has been cleared of any obstructions.
8. Good housekeeping to be observed within the work area at all times.

Site Set Up

1. When the foaming vehicle has been safely parked, ensure entire working area has been cleared of any obstructions.
2. Ensure Main Contractor/Customer has supplied sufficient barriers and fencing.
3. Ensure only authorised personnel within the safe working area.
4. Carry out visual site assessment in order to verify compliance with the Method Statement / Risk Assessment and amend if necessary by agreement and signature from all parties
5. Vents to be checked to ensure they are not blocked.
6. Clothing must not be put on or taken off in any hazardous areas in order to avoid static electricity.

No works under any circumstances to commence until the Main Contractor/Customer has control of the site; the necessary inductions; Method Statements and Risk Assessments have been reviewed and approved.

Sequence of Works: Foam filling of tanks with BritFoam®

- Carry out last minute assessment of the site and working area. Amend Risk Assessment and Method Statement if required to do so
- Check tank label for tank number, capacity and product information.

- Once the chamber covers have been removed, using a gas monitor check that there is a safe working atmosphere (LEL less than 5%) if not cease work and ventilate naturally until suitable levels are achieved.
- Once access is gained into the tank, manually dip to ensure the tank have been completely emptied.
- Ensure the tank is adequately vented, temporary vent to be used if required.
- Gas monitoring be carried out at regular intervals as conditions dictate
- Proceed to inject tank with Britfoam, a resin based hardfoam until the tank becomes full.
- Periodic sampling of the Britfoam will take place via a small valve in the feed pipe. These samples will be taken throughout the injection operation to ensure quality and consistency of the Britfoam.
- Replace manhole chamber lid.
- Finally, our applicator will disconnect hoses and clear immediate vicinity of any debris.
- A delivery ticket will be completed and will include.
 1. Tank Number
 2. Tank Size
 3. Date of decommission
 4. Full site Details
 5. Amount of Britfoam used
- A copy of our delivery note to be left on site/handed to the Main Contractor/Customer for their records.
- Leave site clean and tidy.

Variations to Standard

In the event that the tank manhole connections are at one end of the tank then reverse foaming may be required. This is achieved by placing a pipe inside the tank to ensure that the far reaches are filled to avoid tank voids.

APPENDIX 4.2

VERIFICATION REPORT FOR TREATMENT OF BELOW GROUNND TANKS

SITE INSPECTION RECORD

PROJECT REFERENCE NUMBER:-	3955	PARTIES:-	
SITE VISIT REFERENCE NUMBER:-	3955SIR01	Esh Construction WO Silmon Lees Industrial Services FWS Consultants Ltd	
PROJECT NAME:-	Parsons Yard		
CLIENT:-	Esh Construction Esh House Bowburn North Industrial Estate Bowburn Durham DH6 5PF		
DATE:-	15 February 2022	Sheet No.	1 of 6
WEATHER:-	Dry, light breeze, cloud cover 7/8, 4°C.		
JC (FWS) attended site to undertake a supervisory visit during decommissioning of tanks at the Parsons Yard site to confirm the works were undertaken in accordance with the method statement (provided by Lees Industrial Services).			
SITE INSPECTION (15 February 2022)			
Record of Site Visit			
<u>Plant onsite</u>			
Lees Industrial Services lorry with foaming equipment			
WO Silmon personnel with hand pumps for final emptying of tank(s)			
<u>Personnel onsite</u>			
Esh Construction, WO Silmon, Lees Industrial Services, FWS Consultants			
<u>Health and Safety</u>			
No issues reported during site visit. Working area taped off.			
<u>Information Provided to FWS</u>			
'Generic Method Statement – Tank Decommissioning with BritFoam' by Lees Industrial Services			
<u>Decommissioning Works</u>			
The works were undertaken by Lees Industrial Services personnel under the supervision of WO Silmon.			
Prior to decommissioning, a fourth tank had been identified and emptied, and so four tanks were to be decommissioned rather than the originally planned three. The fourth tank was reported to have contained red diesel or heating oil.			
WO Silmon had emptied all tanks prior to the filling works and arrival of the foaming lorry on site, as per the method statement. No spillages or surface staining were observed. Tanks were reported to be 25,000 litres rather than the 250,000 litres stated in the method statement.			
Certification of the Lees Industrial Services personnel matched those required in the method statement.			

Tank 4 (southernmost) was filled first. Filling was observed by FWS personnel to confirm compliance with the method statement. The tank was filled with pink BritFoam foam 'cement' to surface. The manhole was to be filled at the end, flush to the underside of the inspection cover (all four to be done at once).

FWS also observed the beginning of the filling of Tank 3. FWS were satisfied that the tanks were filled in general accordance with the method statement.

Information Requested

- FWS request a copy the site records for the tank decommissioning that should have been provided to Esh by WO Silmon, for incorporation into the Validation Report.

NOTES ON LIMITATIONS

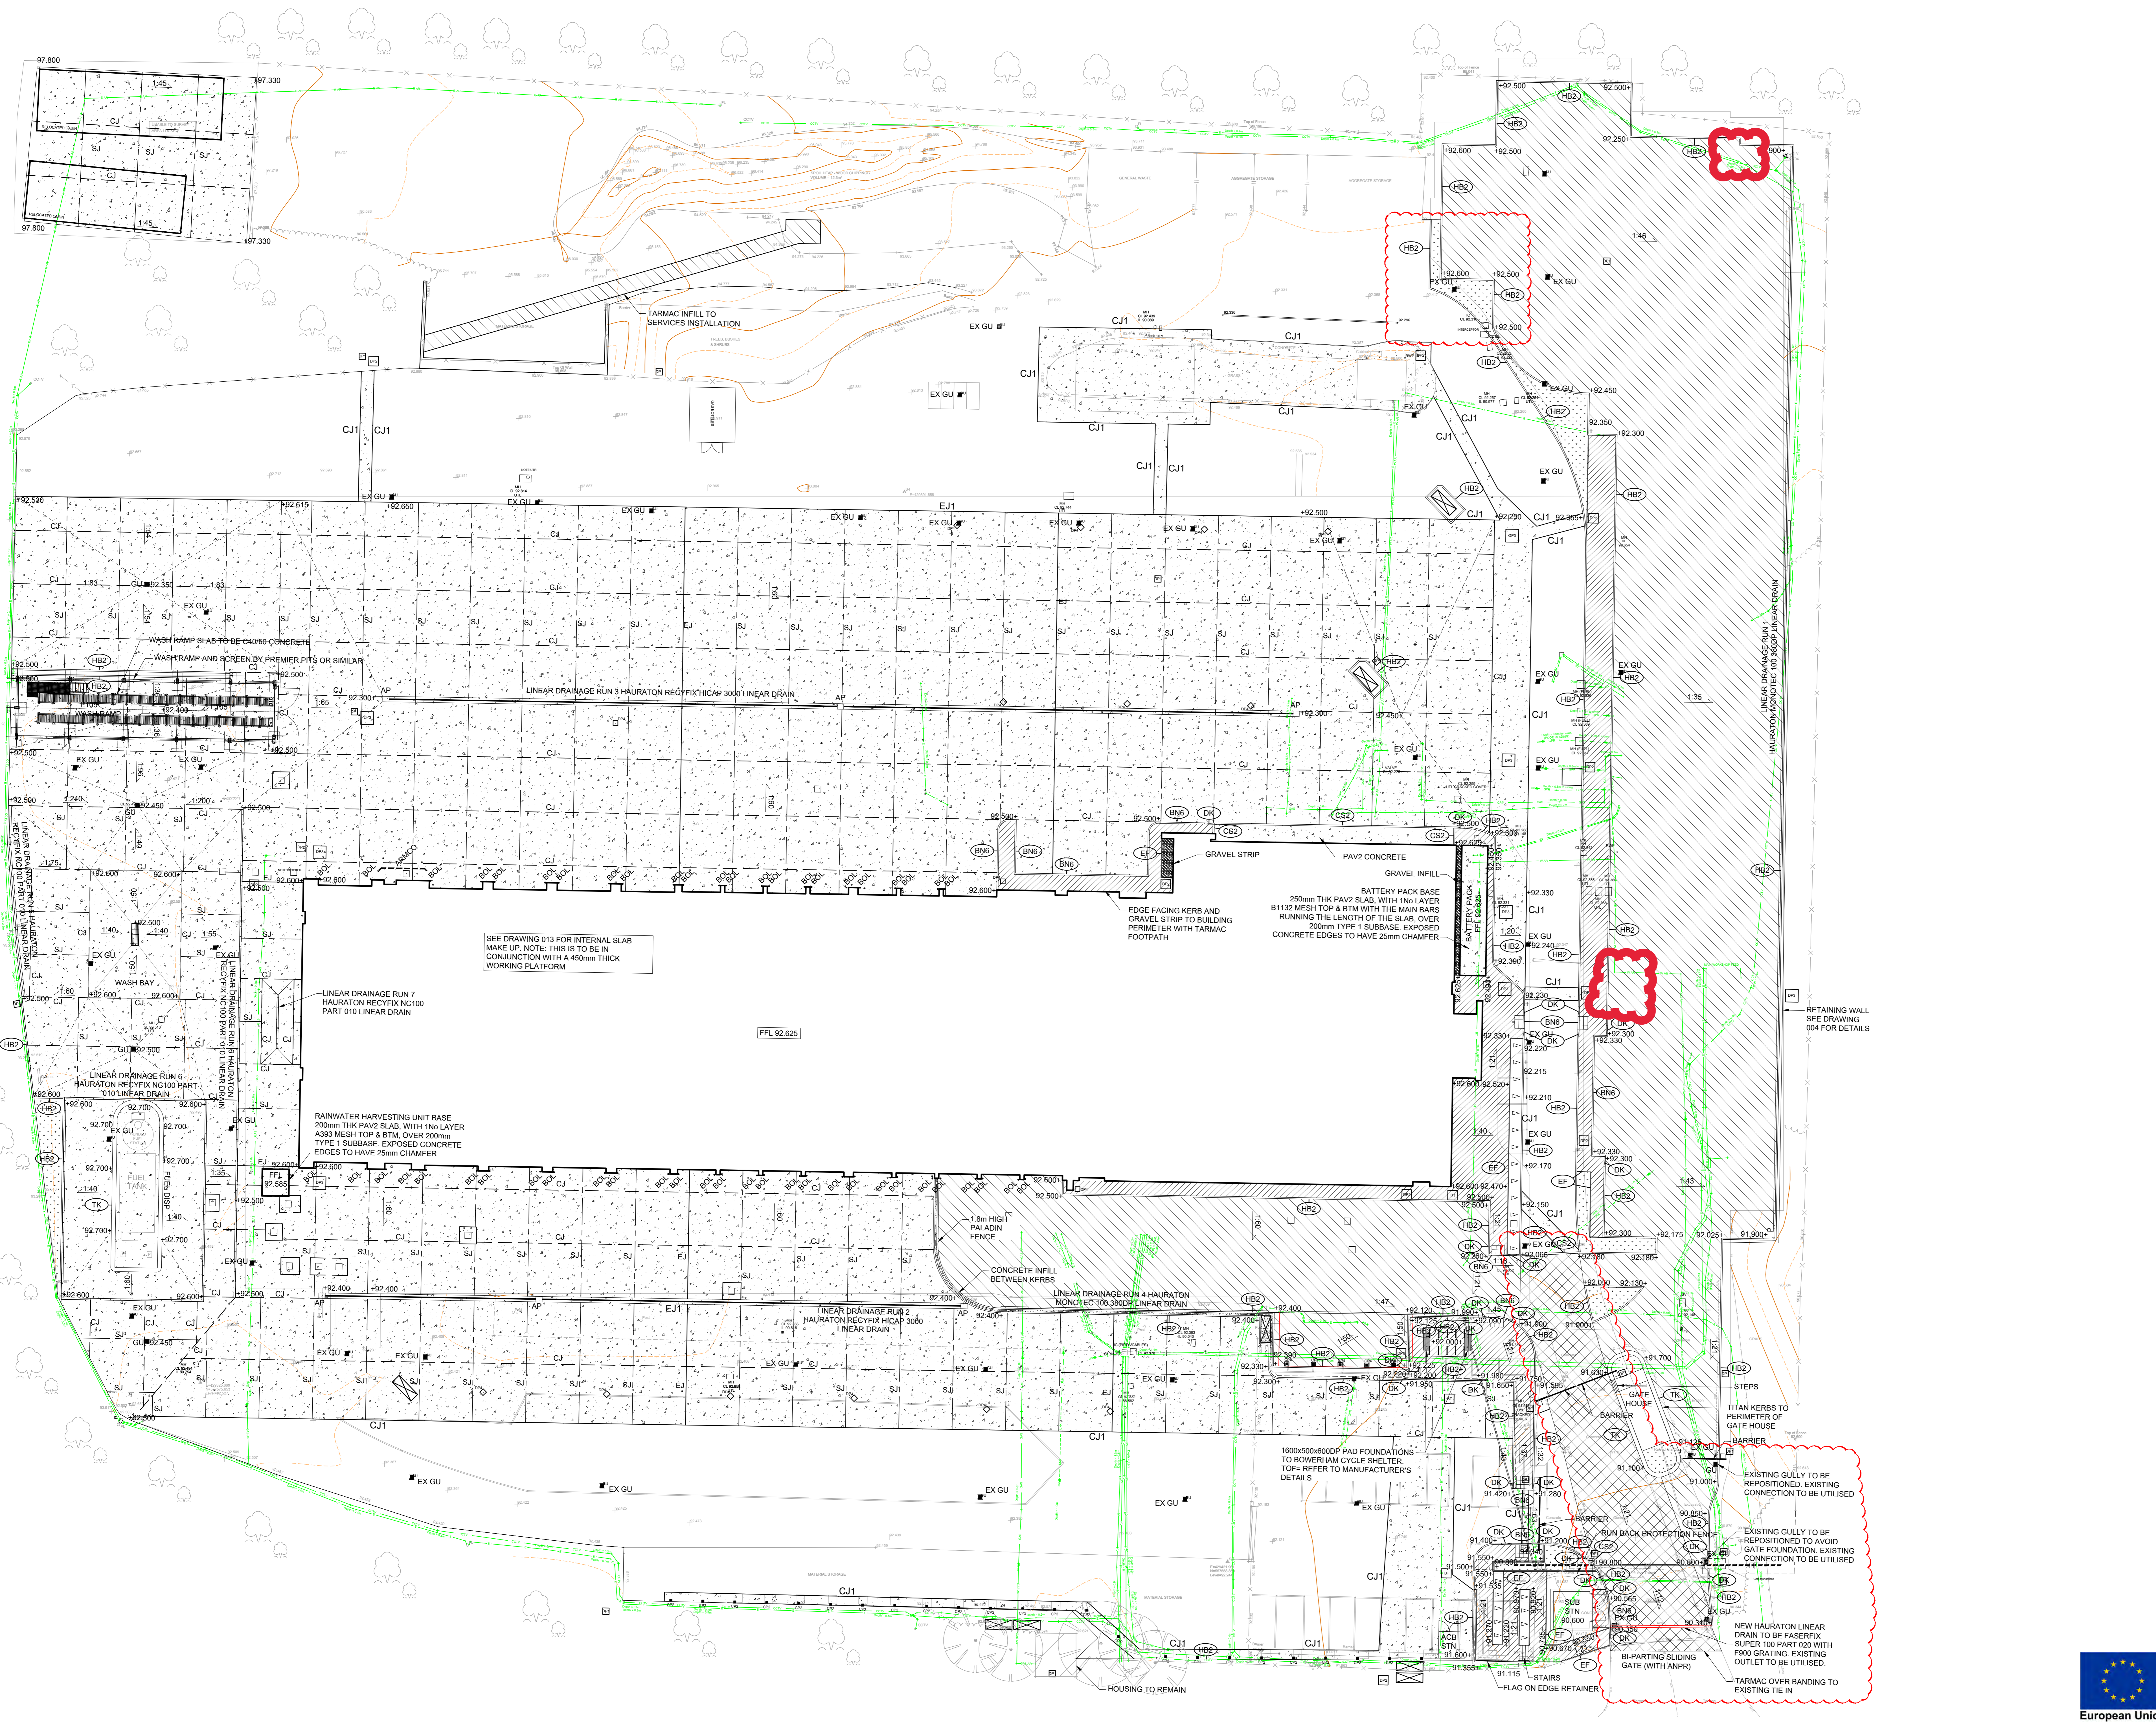

- 1 FWS Consultants Ltd (“FWS”) has prepared this report solely for the use of the client and/or his agent (the “Client”) on the basis of exchange(s) of written proposals and instructions, and FWS accepts no responsibility or liability:-
 - a) for use of this report by any party other than the person for whom it was commissioned, or;
 - b) for the consequences of the report being used for any purpose other than that for which FWS was instructed to prepare it.

Should any third party wish to use or rely upon the contents of the report, written approval from FWS must be sought.

- 2 All information supplied by the Client, the Client’s staff and professional advisers, local authorities, other statutory bodies, investigation agencies and publicly accessible databases, shall be provided to FWS in writing, and is accepted as being correct unless otherwise specified in writing by the discloser of the information.
- 3 The conclusions and recommendations in this report represent the professional opinions of FWS derived from currently accepted industry practices, and through the exercising of reasonable skill and care to be expected of a professional geosciences and environmental consultancy of similar size and experience. The assessments and judgments given in this report are directed by and limited to both the finite data on which they are based and the proposed works to which they are addressed.
- 4 Environmental and geotechnical desk studies comprise a study of available information obtained from various identified sources, authorities and parties. The information reviewed cannot be exhaustive and has been accepted in good faith as providing representative and true data pertaining to site conditions. For clarity, no independent verification of this data is carried out by FWS and it is accepted at face value. Any identified risks in desk study reports are perceived risks based on the information available at the time. Actual risks can only be assessed after carrying out a thorough physical investigation of the site that serves to validate such identified risks.
- 5 Data acquisition during site investigations is subject to the limitations of the methods of investigation used, site conditions and access constraints. Exploratory holes undertaken during fieldwork, particularly boreholes and/or trial pits, investigate a small volume of ground in relation to the size of the site and thus can only provide an indication of site conditions. The opinions provided and recommendations given in this report are based on the desk study information and ground conditions apparent at the site of each of the exploratory holes. There may be ground conditions elsewhere onsite that have not been disclosed by the investigation and which therefore have not been taken into account in this report. FWS will take all due care and make commentary on the adequacy of data collection and therefore the ability to highlight the presence or otherwise of exceptional conditions.
- 6 Owing to the natural variation of the systems that are being investigated, and the anthropological impact similarly changing through time, the findings and opinions in this report are relevant to the dates of the site works and should not be relied upon to represent conditions after a reasonable passing of time. Site conditions will change over time due to natural variations and human activities. The comments made on groundwater, surface water and soil gas conditions are based on observations made at the time that the site work was carried out. It should be noted that these conditions will vary owing to seasonal, tidal and meteorological effects. Variation in the types and concentrations of contaminants and variations in their flow paths may occur due to seasonal water table fluctuations, past disposal practices, the passage of time, or subsequent developments or activities on the site or adjacent area.
- 7 The scope of the investigation, as agreed between FWS and the Client, was undertaken based on the specific development proposals of the Client and may be inappropriate to another form of development or scheme.
- 8 The opinions expressed in this report regarding contamination, geotechnical and/or waste assessments are based on simple statistical analysis and comparison with available guidance values. No liability can be accepted for the retrospective effects of any changes or amendments to these values.

APPENDIX 5

HOTSPOT LOCATION PLAN AND POST-EXCAVATION PHOTOGRAPHIC RECORD

Health and Safety Notes:
 The following key residual health and safety risks have not been eliminated by design and are identified below:
 - Refer to Design Risk Assessment: 2021002-ORA
 Safe methods and systems of work remain the responsibility of the contractor

This drawing shall be read in conjunction with the following specification: 2021002/SP002 Site Preparation and Earthworks
 This drawing shall be read in conjunction with the following specification: 2021002/SP004 External Concrete Slabs
