

/// Indicative area of temporary removal

Approximate area for the temporary removal of boundary wall, and the derelict low wall beyond, to allow for a new temporary gate to be installed to allow construction traffic safely to the site.

Temporarily make-good/consolidate exposed ends of boundary wall with brick and install temporary supports and protection to both ends. All temporary supports to be designed for easy removal and to ensure no damage to existing structures and materials. Lime mortar to be used throughout.

Approximately 8.5m of boundary wall to be stored on site in a suitable location and then reinstated using existing materials in lime mortar following completion of site works.

Do not scale from drawing.
Dimensions are to be checked onsite.
