

Good afternoon Gareth

Thank you for providing the 2no. outfall details for the site.

I have discussed the matter of discharge rates with Richard Wells who states the total proposed discharge rate of 18.8l/s is 70% of the proved existing rate.

The proposed 2no. 150mm flap valves directly bolted to existing river walls should not compromise navigational use and have invert levels set at 8.00m AOD which is above 7.6m nominal Foss Level.

Providing any required consent to carry out the works is also obtained from the EA I have no objection.

Regards

Brian Hebditch
