## SecuraBike BICYCLE RAILS

### Do-it-yourself installation on concrete slab

Read these instructions completely before commencing any work.  
 Remove the Bike Rail from packaging. To minimize damage to its finish, lay the box down and cut out along the box's edge.  
 Consult your local Bicycle Parking Standard for more information on positioning of racks as standards may differ.  
 A string line will be required when positioning multiple racks in a straight line for a neat finish.  
 Make masonry anchor locations on the concrete floor by using the base plate as a template.  
 Masonry anchors should be positioned no closer than five diameters from the edge of the concrete. For eg. this 12mm diameter anchor should be no closer than 60mm (12mm x 5) from the edge of a concrete slab.  
 Remove the Bike Rail prior to drilling to avoid damage to the unit's finish.  
 Remove dust from within the newly drilled holes prior to inserting the masonry bolts.  
 Re-position the unit and line up holes before bolting down.  
 Tighten all masonry anchors and check that the unit is securely bolted down. Use a spirit level to ensure that unit is plumb. Position washers (not included in this box) underneath the base plate as packers if concrete slab is uneven.  
 If you must grind off the top of the masonry bolt, ensure that you protect the unit from grinder damage.  
 Wipe down the Bike Rail with a damp rag or cloth. Recycle packaging or dispose of it thoughtfully.

**Inclusions**  
 4 x BR11B Bike Rails  
 4 x SBR11B Bike Rails  
 16 x M10 x 60mm Masonry Anchors  
 1 x 212 x 150mm L3 Masonry Drill Bit  
**Tools required**  
 Electric hammer / masonry drill  
 Drill socket set  
 Chalk or marker pen to mark floor  
 String line, if installing multiple units  
 Washers and packers to align  
 Spirit level
