Notes:

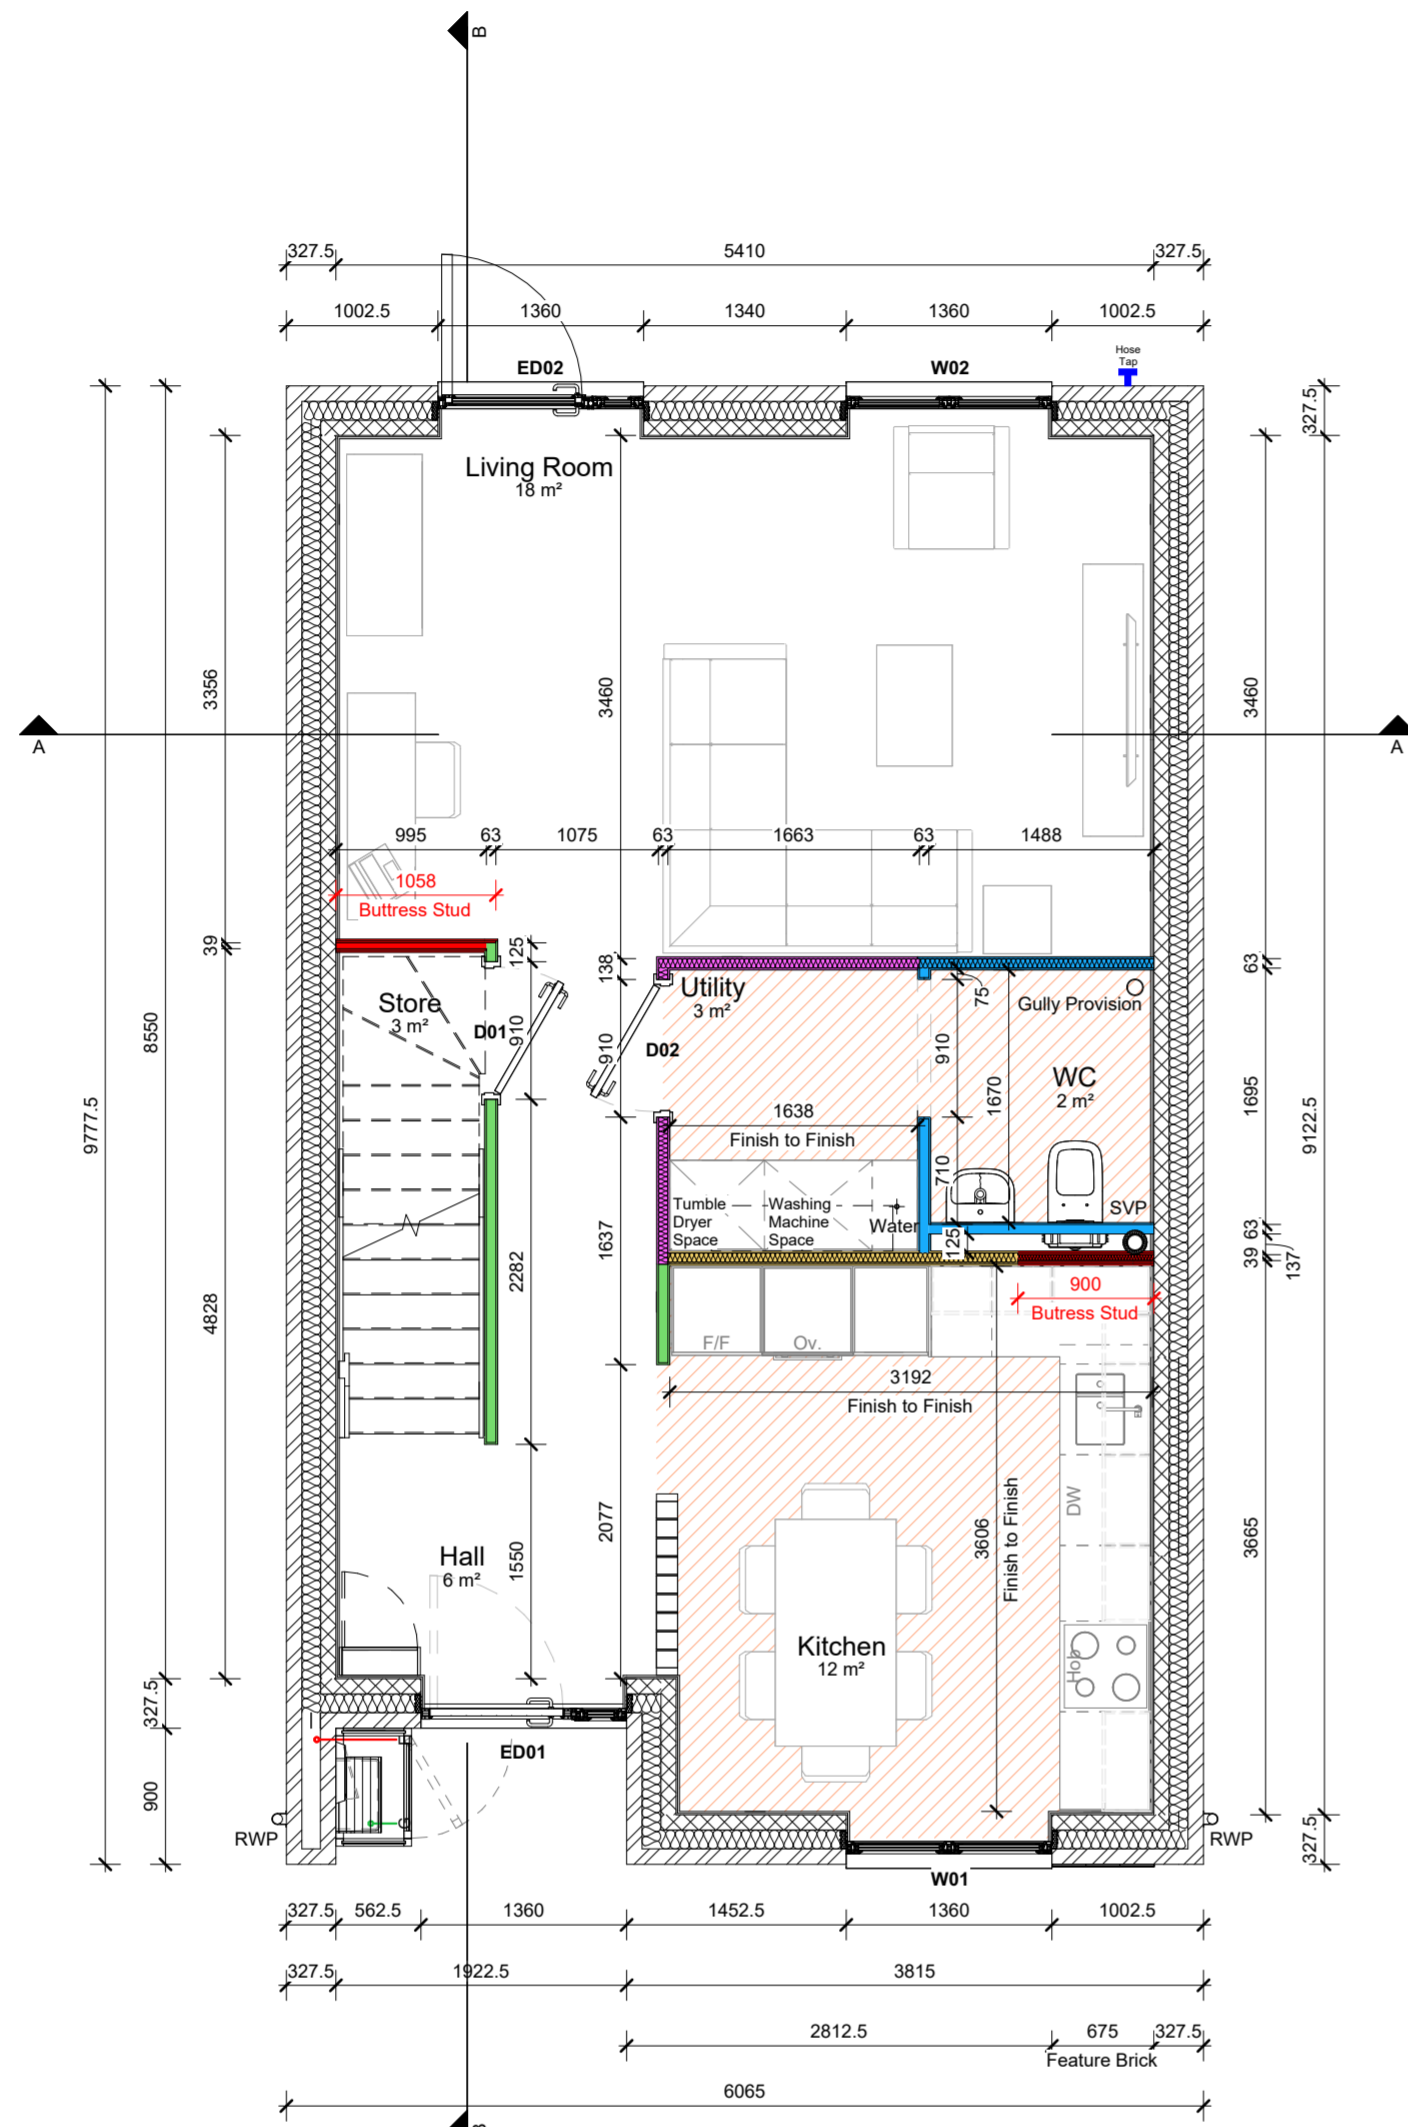

- All dimensions to structure unless otherwise stated.
- Drawing to be read in conjunction with Northstone specification & all other project related design information and drawings.
- Any discrepancies to be reported to Northstone Technical prior to commencement of works.
- All materials and workmanship to be in accordance with current NHBC Technical Standards and Building Regulations.

DO NOT SCALE FROM THIS DRAWING. ALWAYS PRINT IN COLOUR.

Design Risk Register

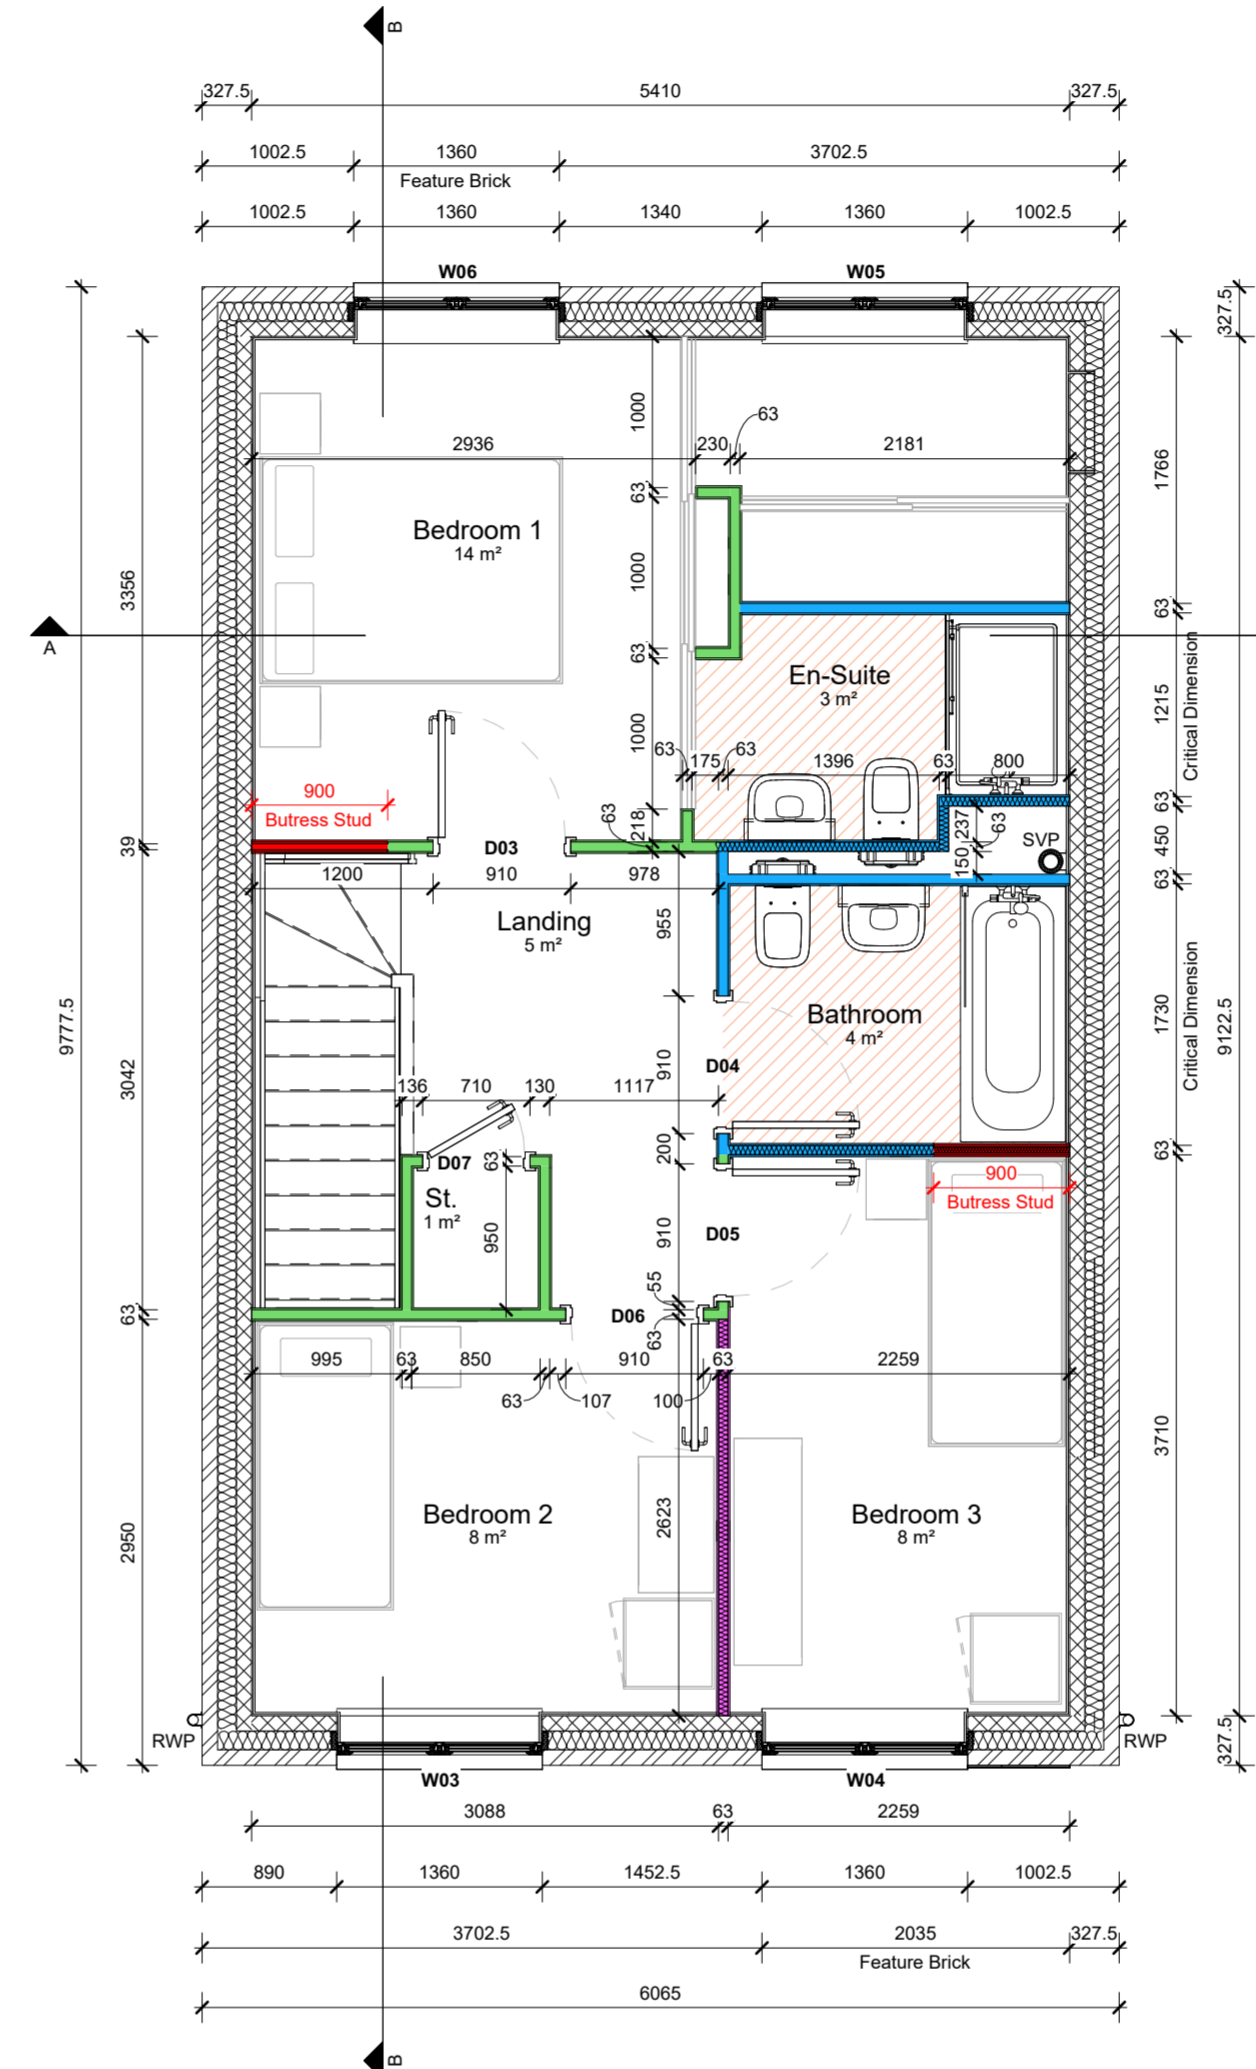

Element	Comments
Lifting Operations	To avoid injury when handling heavy components, specialist handling equipment is to be utilised for the positioning of heavy objects/materials. Large glazing to be installed with specialist lifting equipment by trained personnel. Protection barriers to be provided to prevent mechanical damage following installation.
Craneage	Crane supplier to be satisfied of adequate support to outriggers, correct lifting positions to be established to avoid slippage of sheet materials during lifting and placement. Sub-contractors and suppliers to 'design in' lifting eyes and identify weights of heavy items at drawing approval stage. All RAMS to be obtained and approved prior to any lifting operations being carried out.
Ground Floor Construction	Mechanical Lifting equipment to be utilised to position pre-cast concrete floor planks. Manual handling assessment to be carried out.
Working at Height	Install temporary scaffolding barrier to exposed edges of upper floors including toe boards throughout the build period. Provide scaffolding to all areas requiring placement of materials and finishing to all areas above ground level. Scaffolding to be positioned to avoid the need to overreach causing strain injury when placing materials. Protect areas below high level working from falling debris. Ensure space required for crane is achievable and suitable hard standing is provided. Ensure maximum fall height when fixing trusses into position is 2 metres by utilising appropriate safety measures and equipment.
Stairs	To prevent falls provide temporary guarding and edge protection to open well areas and keep clear during construction, eliminating the possibility of trip hazards. Stairs to be erected as early as possible during the construction process to provide vertical circulation and means of escape in case of fire.
Masonry Construction	When working at height mechanical lifting measures required to lift brick and block packs into position to reduce manual handling.
Lintels	Manual Handling Assessments to be carried out for all lintels, light craneage to be utilised for lintels considered too heavy for manual handling.
Structural Steelwork	Mechanical lifting measures required to reduce manual handling. Ensure required space for crane is achievable and suitable hard standing is provided.
Windows / Structural Openings	Any structural apertures below 800mm to be fitted with temporary guarding to prevent falls. Any structural apertures below 800mm and extending to floor level to be fitted with temporary guarding and edge protection to prevent falls. Mechanical lifting measures and frame and glazing fitted separately to be considered for installation of large windows and combination door & window frames. Window manufacturer to be consulted regarding best means of installation.
Window Cleaning & Maintenance	'Easy Clean' hinges are not an option due to the top hung design to a majority of the windows, as such windows should be cleaned from ground level using a telescopic 'reach & wash' system. All windows used to be Aluminium or UPVC frames to eliminate the need for future decoration.
Roof Construction	Ensure space required for crane is achievable and suitable hard standing is provided. Ensure maximum fall height when fixing trusses into position is 2 metres by utilising appropriate safety measures and equipment.

WALL TYPE LEGEND

Brick Face External Wall

- OUTSIDE: 102.5mm clay facing brickwork to site specific materials plan
- 125mm cavity fully filled with insulation as specification
- 100mm block as specification
- INSIDE: 12.5mm plasterboard on 10mm adhesive slabs, all joints taped and filled before wet plaster skim finish

NON LOADBEARING STUD PARTITIONS

General Partition

- 63x38mm C16 studwork at max 600mm centres with suitable noggins
- Plattress between stud with 12mm Ply where required for MEP fixtures and fittings
- 1no. layer of 12.5mm plasterboard mechanically fixed to stud both sides of wall with all joints taped and filled before wet plaster skim finish

Plattressed Partition Wall

- 63x38mm C16 studwork at max 600mm centres with suitable noggins
- 12mm ply mechanically fixed to stud on load-bearing side of wall (Kitchens etc.)
- 1no. layer of 12.5mm plasterboard mechanically fixed to stud both sides of wall with all joints taped and filled before wet plaster skim finish

Acoustic & Fire Rated Partition

- 30 Min
- 63x38mm C16 studwork at max 600mm centres with suitable noggins
- Voids between studwork fully filled with 60mm Rockwool Flexi or similar approved mineral wool.
- Plattress between stud with 12mm Ply where required for MEP fixtures and fittings
- 1no. layer of 12.5mm plasterboard mechanically fixed to stud both sides of wall with all joints taped and filled before wet plaster skim finish
- 1no. layer of 12.5mm plasterboard mechanically fixed to stud on **dry-room** side of wall where required with all joints taped and filled before wet plaster skim finish
- Achieves REI 30 fire resistance in accordance with British Gypsum White Book

Wet-Room Partition (WC / Bathroom / En-suite)

- 63x38mm C16 studwork at max 400mm centres with suitable noggins
- Plattress between stud with 12mm Ply where required for MEP fixtures and fittings
- 12.5mm moisture resistant plasterboard mechanically fixed to stud on **wet-room** side of wall with all joints taped and filled prepared for tiling or wet plaster skim finish
- 12.5mm standard plasterboard mechanically fixed to stud on **dry-room** side of wall where required with all joints taped and filled before wet plaster skim finish

Framing Wall

- 63x38mm C16 studwork wide face out at max 400mm centres with suitable noggins
- 1no. layer of 12.5mm plasterboard mechanically fixed to stud on room side of wall with all joints taped and filled before wet plaster skim finish

Anchored/Buttress Stud Partition

- Refer to structural engineers details and Northstone construction details. Buttress Studs and Windposts not required on party walls.

Insulation Between Studs

- Voids between studwork fully filled with 60mm Rockwool Flexi or similar approved mineral wool where indicated on drawing for AD.E compliance
- Achieves R_w40dB in accordance with AD.E
- Achieves REI 30 fire resistance in accordance with British Gypsum White Book

NOTES

- Refer to engineers details and specification for all block strengths.
- Key to be read in conjunction with construction specification.
- Expansion and movement joints, bed reinforcement and wind posts to engineers details.
- All dimensions are to structure unless otherwise noted.

FLOORING LEGEND

LVT Flooring

- Vinyl flooring applied as Northstone finishes specification and relevant customer options.

CRITICAL GLAZING DIAGRAM
Critical glazing locations in internal and external walls for windows, doors and side lights in accordance with BS 6206 and all current building regulations. Shaded area indicates critical locations to which the requirements of Approved Document K(4) applies. (i.e. glazing falling within zones 1, 2, 3, 4, 5, 6 & 8).

All glazing in critical locations should:
a) If broken, will break safely.
b) Be sufficiently robust to resist breaking.

- Notes:**
- Schedules to be read in conjunction with all project specification documents, floor plans and elevations
 - Structural opening size includes any sidelights
 - Frame set back is taken from front face of brick
 - Refer to manufacturers information for detailed intel schedules
 - All accessible windows and doors to be PAS24 tested to comply with Part Q of building regulations
 - All dimensions to be checked on site prior to manufacture

Escape from upper storey a maximum of 4.5m above ground level: ALL inner rooms where applicable and all first floor habitable rooms (excluding kitchens) to be provided with an escape window (or external door) which complies with Approved Document B1 Section 2 Paragraph 2.2.

Dwellings with one storey more than 4.5m above ground level: A protected stairway should be provided with minimum 30 minute fire resisting construction at all storeys to comply with Approved Document B1 Section 2 Paragraphs 2.5.

Unobstructed opening eaves area to be at least 0.33M² and at least 450mm high and 450mm wide. Bottom of windows to be not more than 1100mm and not less than 800mm above the floor. Escape windows to have non lockable fasteners and hinged to achieve the minimum required opening.
