

Heritage Impact Statement

The proposal is that an electric charger be mounted at the back of the property which would be installed by Ohme. [REDACTED]

It would be impossible to have an electric car without a home charger [REDACTED]

We park our cars at the rear of the house which is out of sight of the roads bordering the house (High Street and Church Lane). The charger would be sited in an unobtrusive place at the rear of the house, just in front of where the cars are parked.

If we employed the external route for the wiring, incorporating the use of the cellar and therefore not being seen at all from Church Lane as the air vent on that side of the house cannot be seen. It would have minimal impact to the side of the house, which again cannot be seen from either the High Street or Church Lane.

Yours

[REDACTED]

Alyson Fisk
