To whom it may concern,

Over the last 11 years the Golf Centre has grown in popularity, even more so recently with the installation of radar technology & interactive touch screens. We currently have 26 bays, 16 covered & 10 uncovered. During peak hours customers would rather wait for a covered bay to become free than use an outside uncovered bay. This is because the covered bays provide shelter, privacy, and entertainment from the interactive touch screens. The outside bays are exposed to the elements, offer no privacy or technology. The table in figure 1 demonstrates how the bay usage is distributed between the covered (1-16) and uncovered bays (17-26). The extension we are proposing to build sits on the footprint of 10 existing outdoor bays and land already used as part of facility. The proposed extension will have two floors. The ground floor will facilitate the kitchen, bar, seating area and 8 covered bays with screens. Upstairs the first floor will consist of additional toilets and 8 covered hitting bays with screens. In summary, we would like to cover existing bays, spread customer traffic across the facility and offer tech entertainment from every bay.
